**Other Investment Targets**

None

**Project Description**

This easement acquisition project is for an ± 1,537.80-acre property located in Monterey County. The property is landowner operated and utilized for a cattle grazing operation. The property supports 50-60 head of cattle from November to July and is part of a larger operation. The operation is supported by ample and reliable water provided by multiple perennial and seasonal streams and stock ponds.

**Strategic Value**

*Climate Resilience*

*Climate Smart Management Practices:* Grazing on the property reduces the risk of catastrophic wildfire by reducing fuel loads on the property.

*Co-Benefits*

*Biodiversity:* The property contains a diverse array of native plant communities, including coastal scrub, annual grassland, coastal oak woodland, and rare Old Growth Coast Redwood Forest. The property also lies within an established movement corridor of California condor (*Gymnogyps californianus*).

*Proximity to Protected Land:* The property is contiguous with other protected lands, including Garrapata State Park and Joshua Creek Canyon Ecological Reserve, and in close proximity to Palo Corona Regional Park. These conserved areas form a critical landscape mosaic along the Central California coast, and the permanent protection of the Easement Area will close a key gap in this interconnected network.

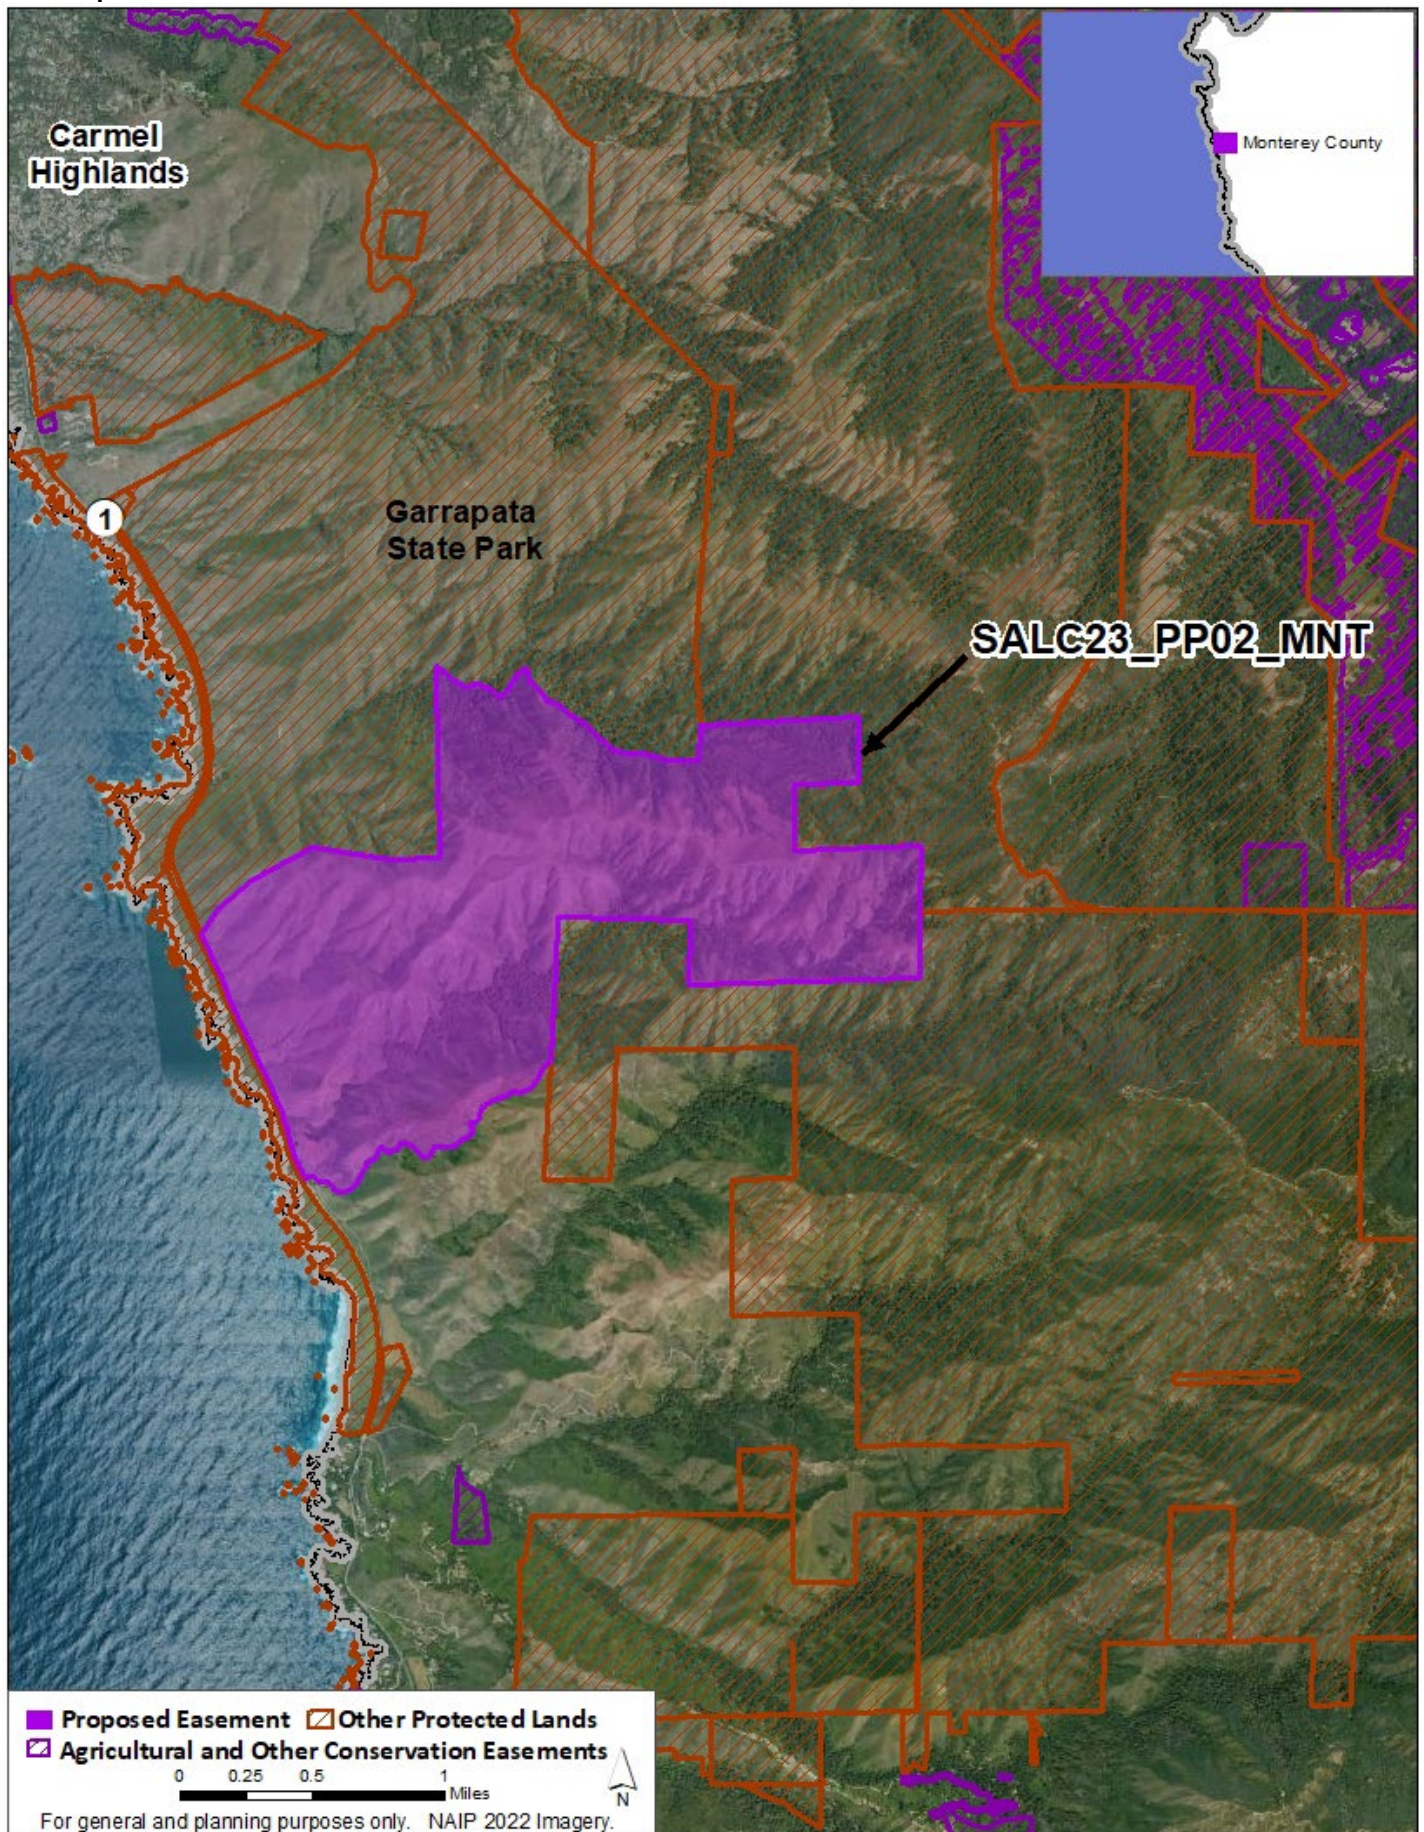

*Viewshed:* The project will preserve the viewshed along Highway 1.

**Notable Features**

The conservation easement will restrict agricultural intensification.

**Other Investment Targets**

None

**Project Description**

This easement acquisition project is for a ±371-acre property located near the cities of Petaluma and Sonoma. The property is utilized for regenerative cattle grazing operated by a lessee for approximately six months of the year. Some cattle are finished off-site, while the rest are processed for a direct market beef program that supplies grassfed beef to consumers throughout Sonoma and Marin counties. The grazing operation is supported by ample and reliable water and well-maintained infrastructure.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is in an area with high demand for rural estates. Protection of the property helps support infill and compact development within the cities of Petaluma and Sonoma, both within a 30-minute drive.

*Community Separator:* Protection of the property would contribute towards the formation a community separator between Sonoma and Petaluma.

*Climate Resilience*

*Climate Smart Management Practices:* The lessee grazes cattle using holistically planned rotational grazing that also contributes to reducing wildfire danger by reducing the property's fuel load through grazing and prescribed burns. The lessee anticipates organic certification for the property this summer.

*Co-Benefits*

*Economic:* Creation of local jobs and support of local farm services. The lessee employs, trains and mentors many beginning ranchers. Beef is processed and packaged locally.

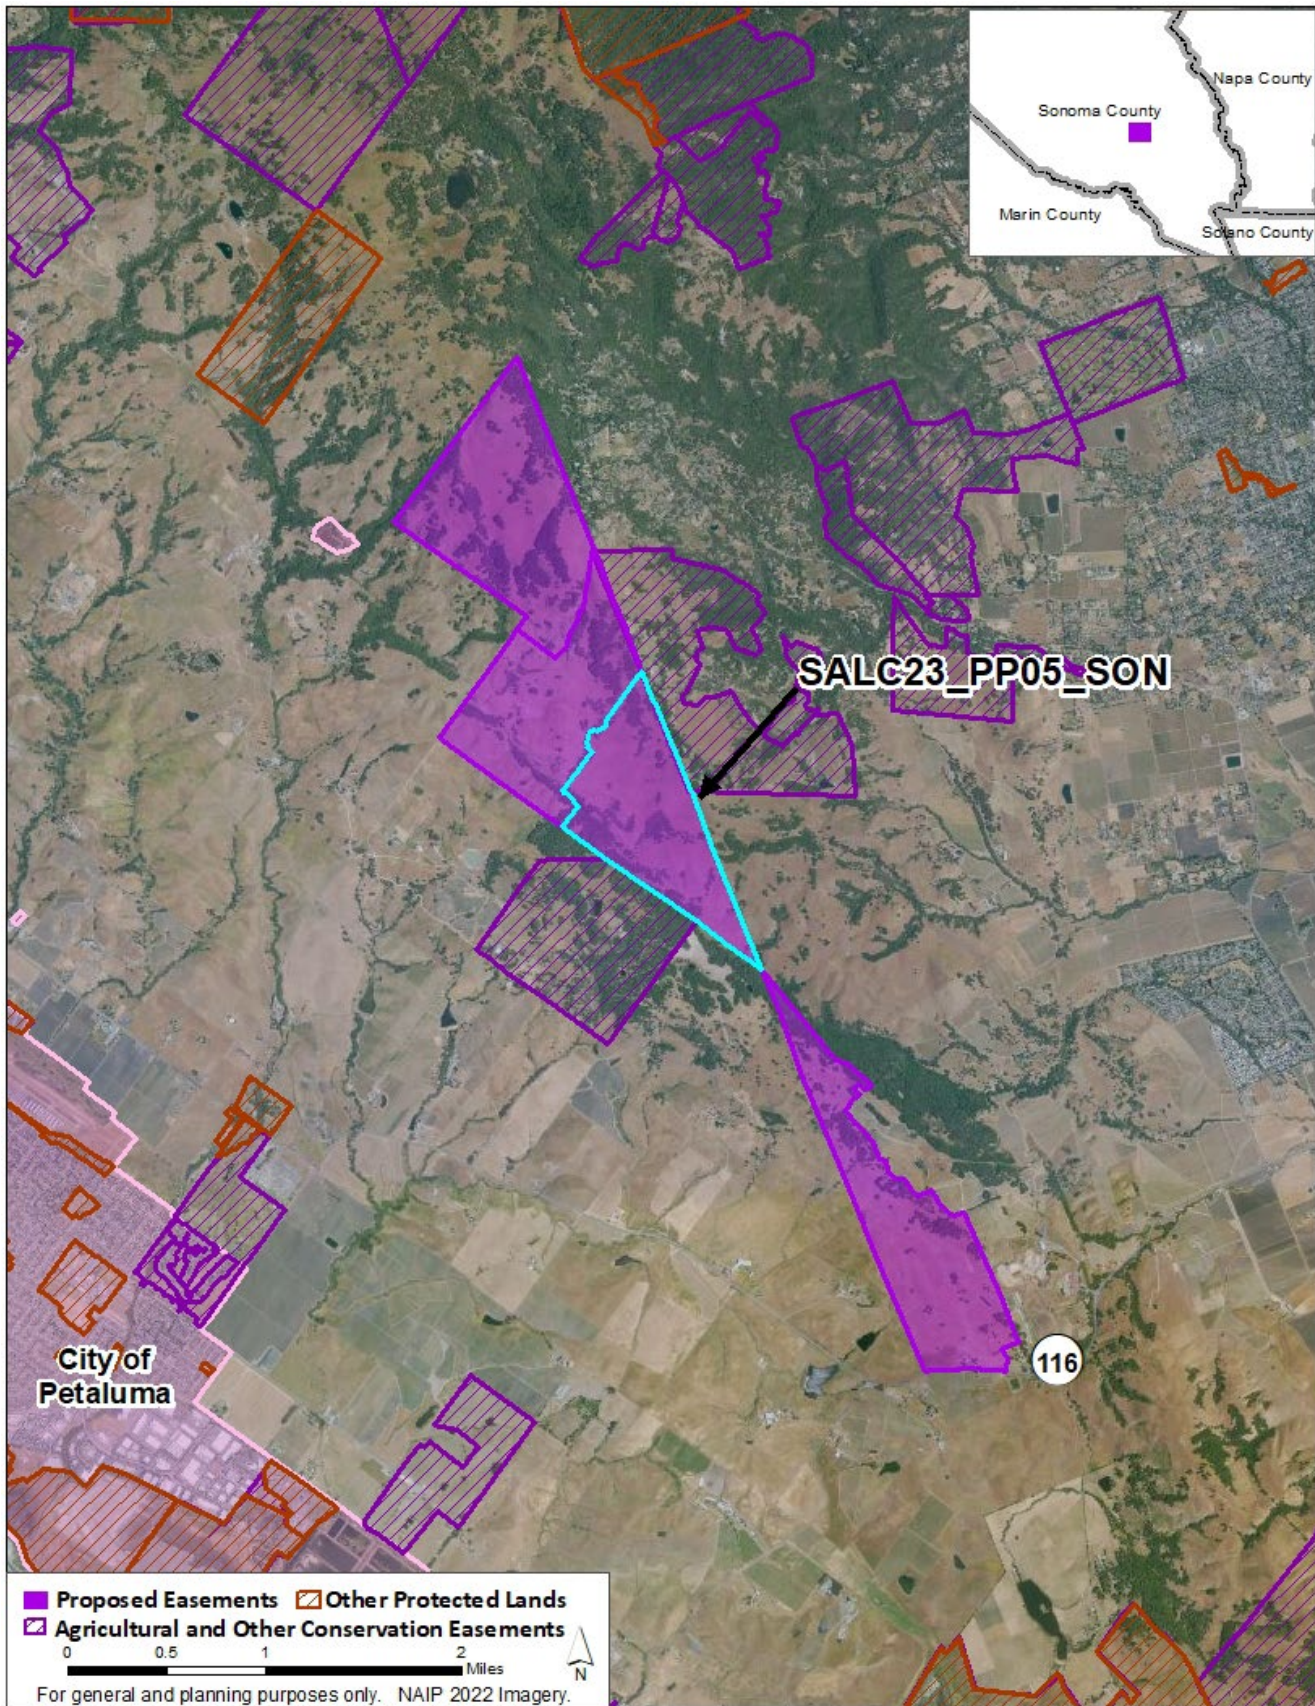

*Biodiversity:* The property hosts grasslands, oak woodlands, and riparian areas, including Rodgers Creek frontage, which is a critical habitat for steelhead trout and the California red-legged frog. Protection of the property will further boost habitat connectivity in the region.

*Proximity to Protected Land:* Numerous other protected lands in the immediate vicinity.

**Notable Features**

The conservation easement will limit cultivation to designated agricultural areas.

**Project Description**

This easement project is for a ±90-acre property outside of the City of Lincoln in Placer County. The property is leased for livestock grazing and contains a small beekeeping operation. The property supports 20 cow/calf pairs but are part of a larger local cattle operation. The lessee has leased this property for over 35 years and has about 75 cows rotated between 4 properties, including a SALC-protected property. If cattle were no longer sustainable, there is a pumping station that could irrigate the property and convert to irrigated crops or rice, although the landowner has no intention to do so.

**Strategic Value***Infill and Compact Development*

*Infill/Compact Development:* Placer County is rapidly growing. The property is located within the City of Lincoln's Village 5 Specific Plan, which is supportive of continued and new agriculture. The property is approximately 3 miles from the currently constructed Placer One, which will include a mix of residences, commercial buildings, a university extension, and a surf park.

*Co-Benefits*

*Biodiversity:* The property contains a half-mile stretch of the Auburn Ravine, a year-round stream that is vital habitat for sensitive and listed species including fall-run chinook salmon, central valley steelhead, and the California red-legged frog. The riparian area is dominated by large valley oak trees and elderberry shrubs. Placer County identified Auburn Ravine and Racoon Creek in their Ecosystem Restoration Plan for opportunities to protect and improve wildlife and fisheries habitat in western Placer County. The Friends of Auburn Ravine have been using the dam site on the property to count salmon for more than 5 years and have placed a salmon camera along the ravine in Lincoln.

*Proximity to Protected Land:* The property is located near 1,683 acres of contiguous protected land. There are several other protected lands within a 5-mile radius of the property.

**Other Investment Targets**

None

**Project Description**

This project is for a ±120-acre easement acquisition near the City of Lincoln. The property is leased for grazing to a rancher who has been grazing the property for over 40 years and is part of a larger cattle operation. The property currently supports 60 cow/calf pairs year-round. Cattle are sold to local auctions and markets. The property also supports beehives for a local family-owned business. This agreement also goes back over 30 years. The property contains multiple water sources, such as a large pond (which receives water from rain and a small spring), a Nevada Irrigation District ditch, a well, and groundwater rights. In winter/spring there are also vernal pools that form with the rain.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is located a few miles north of downtown Lincoln, which continues to be one of the fastest growing cities in California, and there is continual demand for rural housing in and around Lincoln. Protection of the property would add to conserved areas and create a strategic block to encourage development closer to already developed areas.

*Co-Benefits*

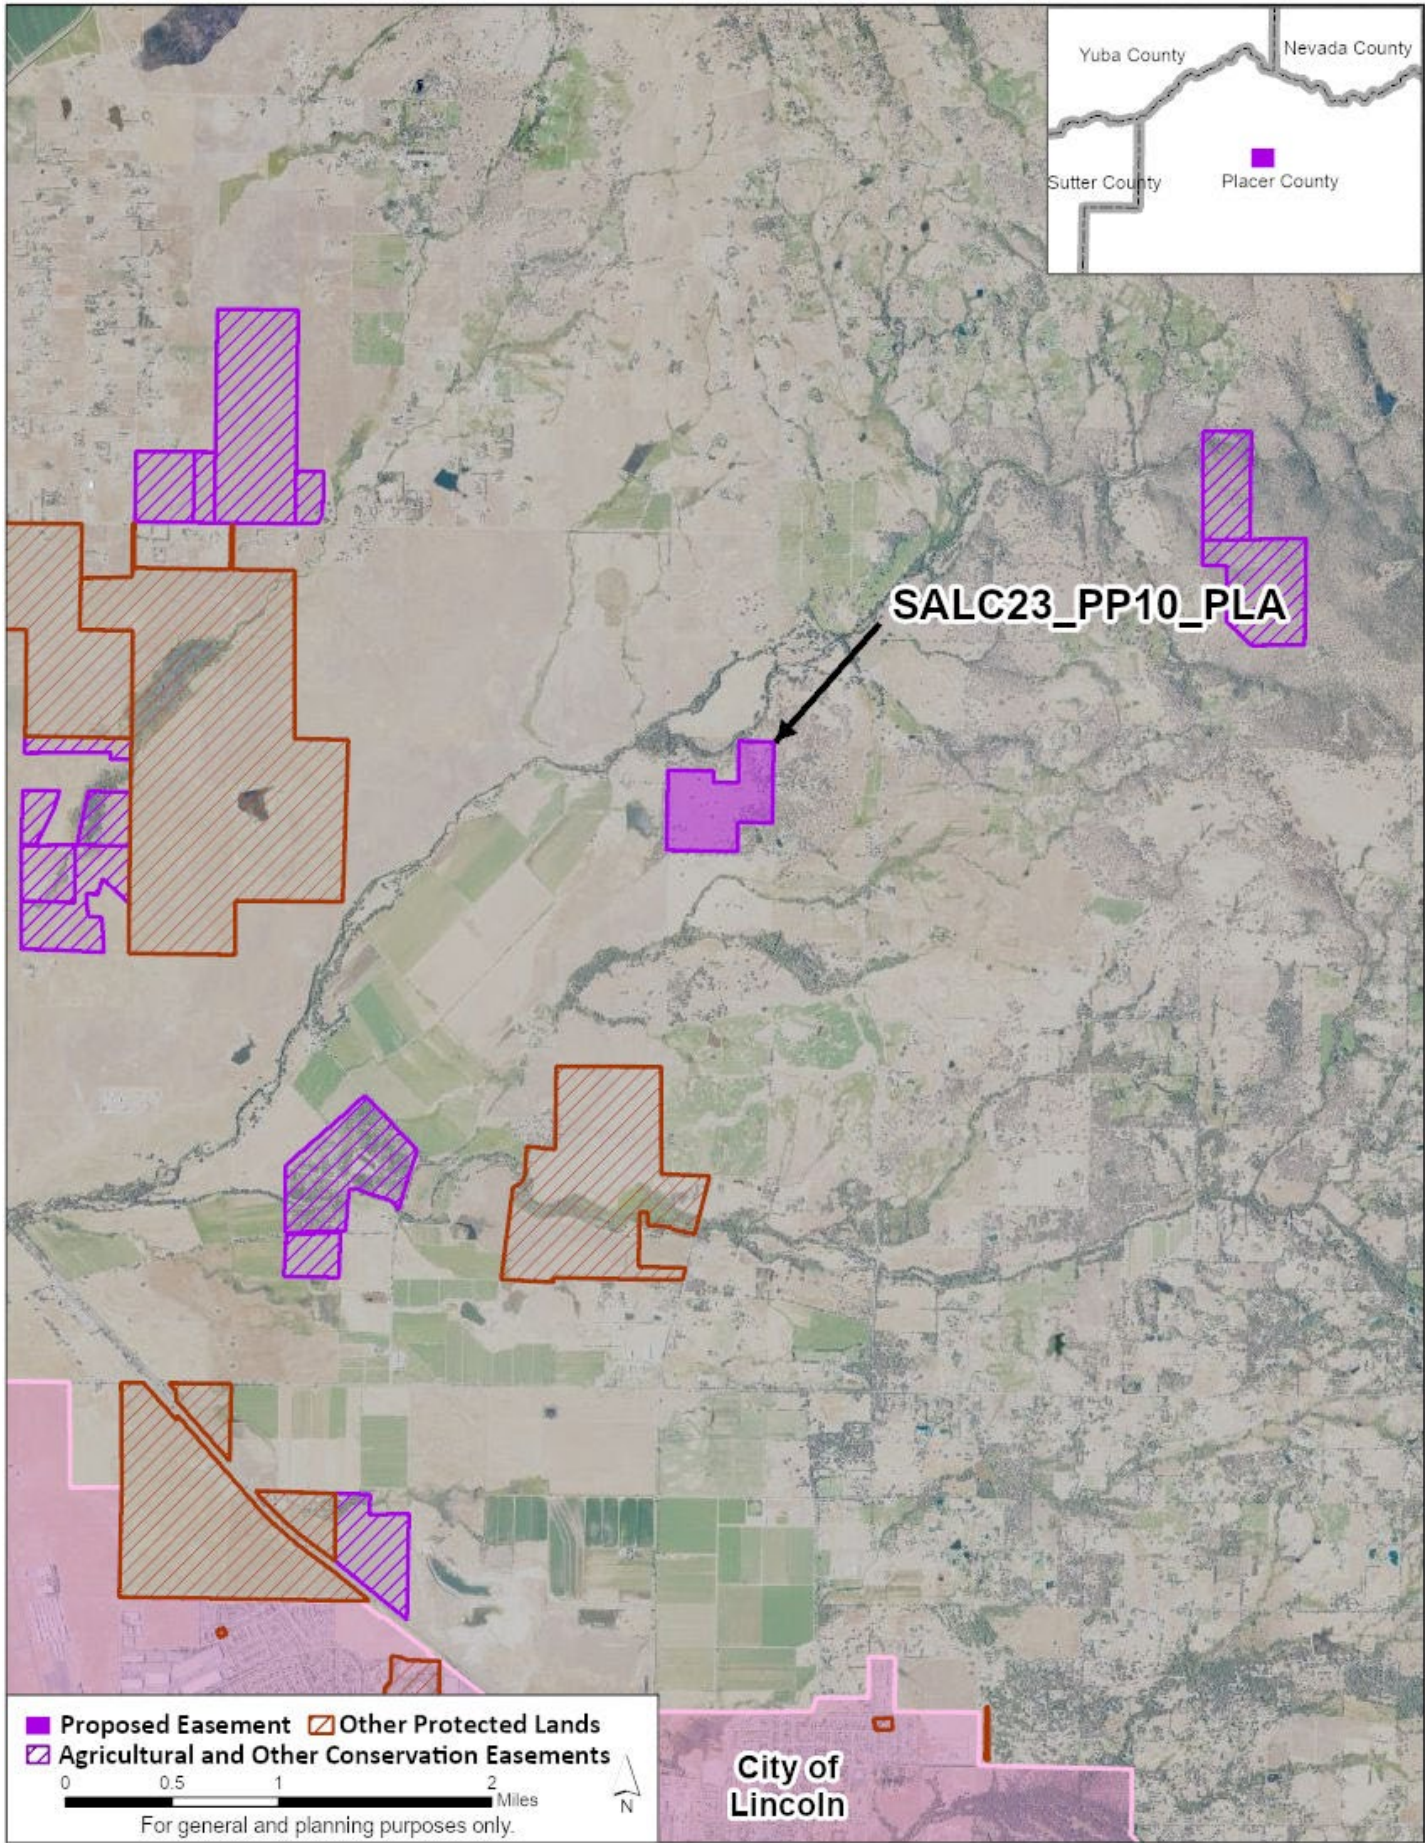

*Proximity to Protected Land:* The property would add to nearly 6,000 acres of protected land in the area. The protected properties include a mix of ranchland, preserves, and Auburn Ravine and Racoon Creek habitat protection.

**Project Description**

This agricultural easement project is for a ±524-acre property that supports a diverse agricultural operation outside of the City of Ione. The property supports a uniquely diversified agricultural operation that includes approximately 200 sheep and 60 cow/calf pairs, while the adjacent, but excluded farmstead parcels permanently house 160 hogs, 2,000 turkeys, and 2,000 chickens. Water is provided through one agricultural well and riparian rights on Dry Creek. The established farm on the adjacent property features a self-serve farm stand, online direct-to-consumer sales, and local and regional wholesale distribution of products.

**Strategic Value***Infill and Compact Development*

*Infill/Compact Development:* This project is located approximately 3 miles from the City of Ione, which is an expanding area for housing and approximately 35 minutes from job centers in Elk Grove. Protecting the property with an easement will remove the potential for rural residential subdivision and help to focus growth in established urban areas.

*Climate Resilience*

*Climate Smart Management Practices:* High level of planning and sustainable agricultural practices based on a comprehensive carbon farm plan. Soil building practices include rotational grazing, composting and cover cropping to increase soil carbon.

*Sustainable Agriculture Use*

*Soil quality:* The property is comprised of 118 acres of Prime Farmland, 16 acres Farmland of Statewide Importance, and 118 acres Farmland of Local Importance. The landowner implements composting and cover cropping practices to improve the moisture holding capacity and fertility of the soil.

*Co-Benefits*

*Biodiversity:* The property is crossed by Dry Creek which has intact riparian corridors. The practices implemented under the carbon farm plan increase biodiversity on working landscapes.

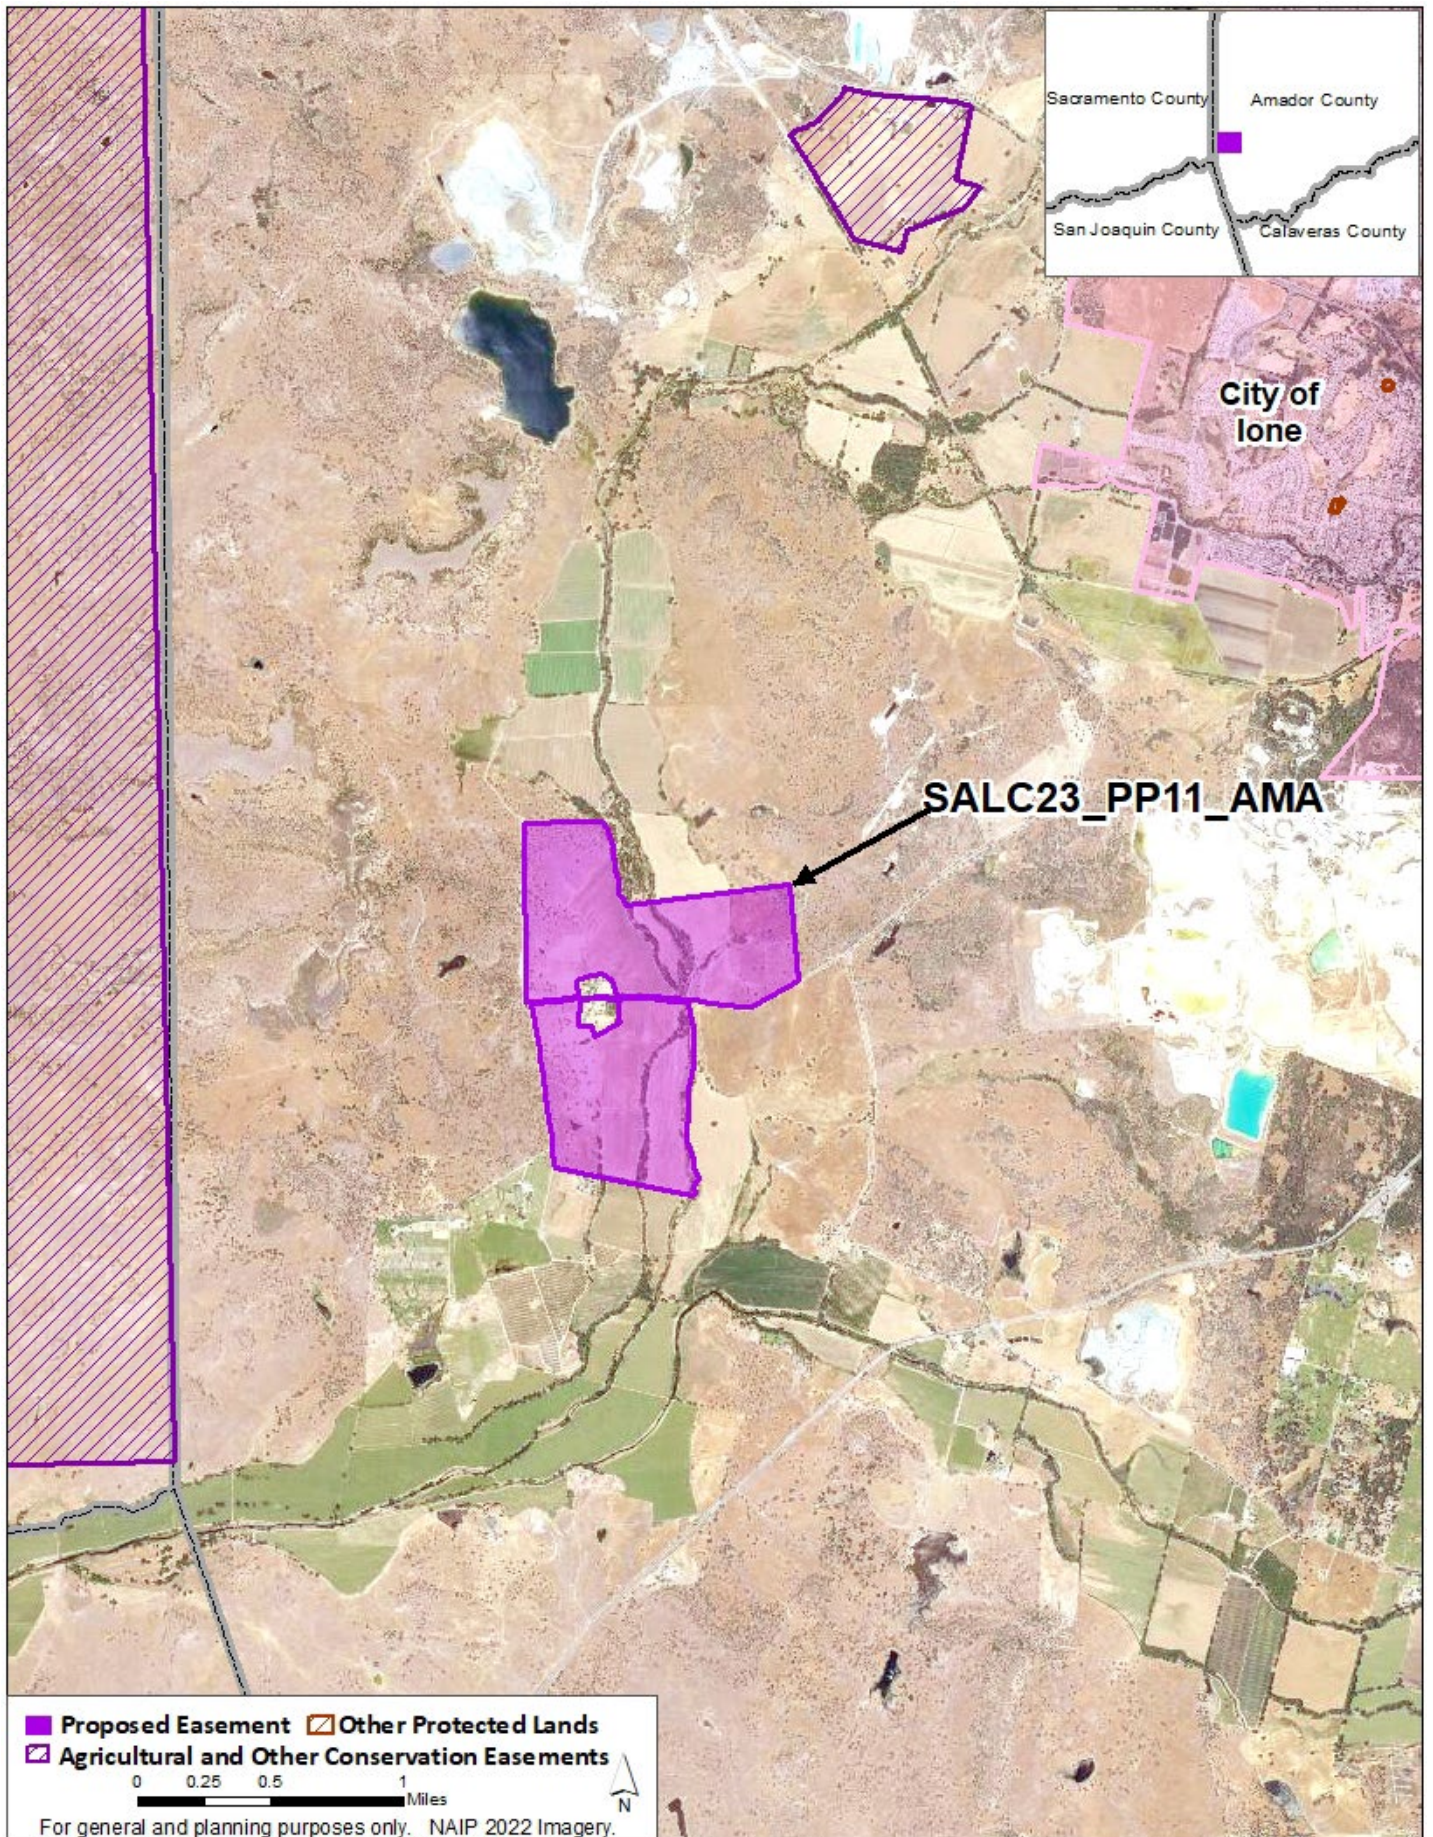

**Notable Features**

A carbon farm plan outlines strategies to increase carbon sequestration and enhance soil organic matter.

Reserving a 20-acre commercial solar array area and a 49-acre area for agricultural intensification.

**Project Description**

This fee-title project is a ± 1,040-acre property located in El Dorado County. The property is lessee operated and is utilized for a cow-calf operation. The property has a stocking capacity of 60-80 head of cattle and is part of a larger operation. The cattle are sold through the Cattleman's Livestock Market in Galt. The operation has ample and reliable water provided by stock ponds and seasonal creeks that run through the property.

**Strategic Value**

*Infill and Compact Development*

*Greenbelt:* The property would add to the growing number of protected properties south of the City of El Dorado.

*Climate Resilience*

*Climate Smart Management Practices:* The property has implemented regenerative practices, such as rotational grazing, solar-powered troughs, and following residual dry matter guidelines to prevent overgrazing.

*Co-Benefits*

*Biodiversity:* The property hosts seasonal creeks, blue oak woodlands, grasslands, and other native plant communities and provides regional habitat connectivity with adjacent protected lands.

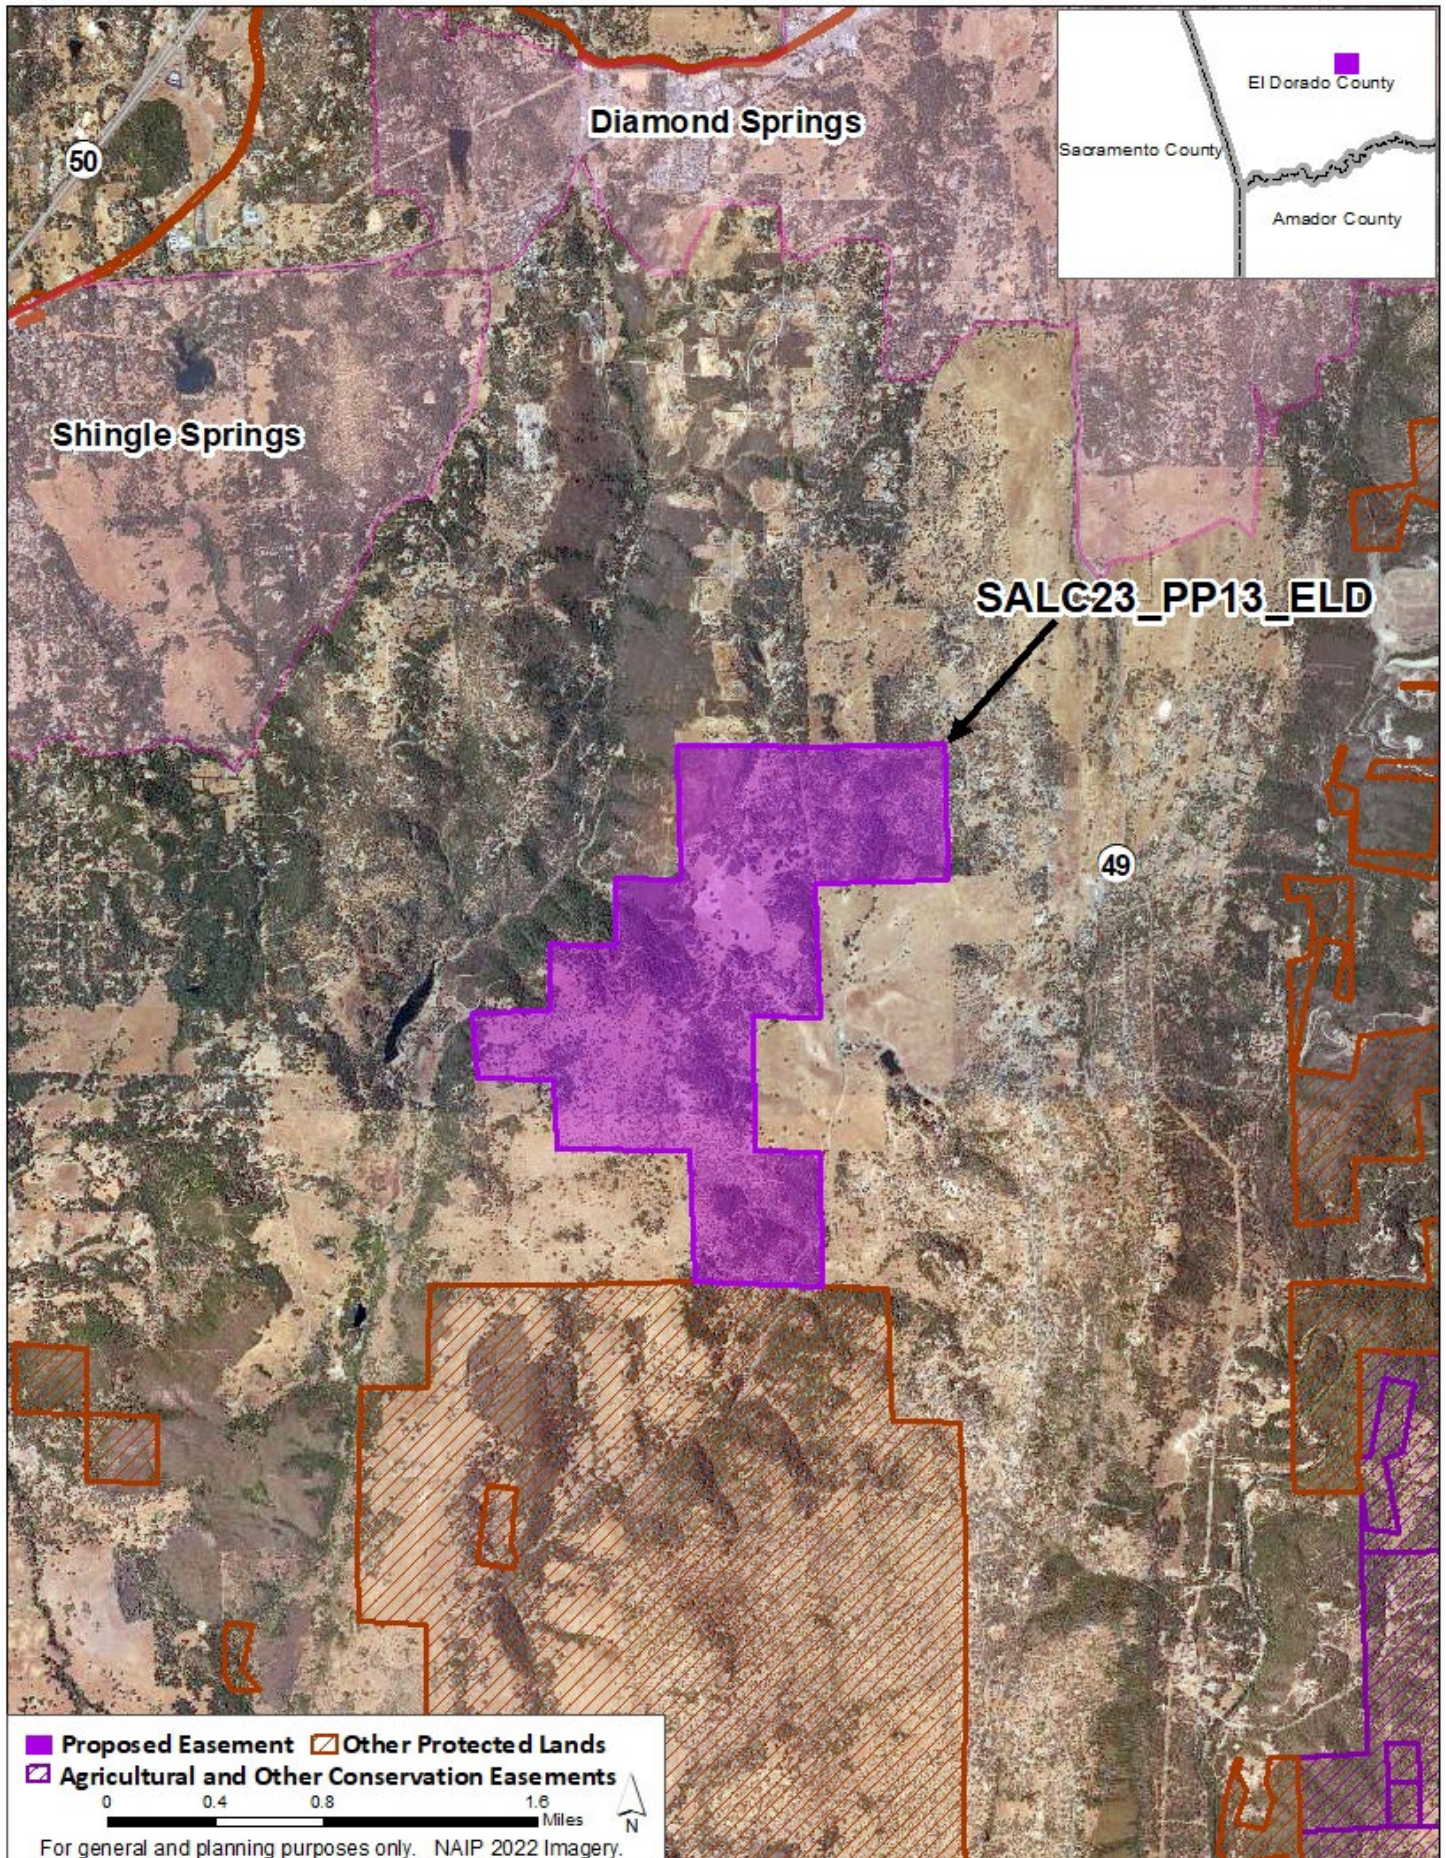

*Proximity to Protected Land:* The property is in proximity to other protected lands under easement held by American River Conservancy and the Bureau of Land Management.

**Project Description**

The project is for the acquisition of a conservation easement on a ±87-acre property in Yolo County. The soils are classified as Prime Farmland, and the property is used for growing almonds. On-site wells, surface water access, and riparian rights provide sufficient water for the agricultural operation.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* This project would prevent rural residential development and would support infill in the nearby community of Esparto.

*Climate Resilience*

*Climate Smart Management Practices:* The landowner implements several sustainable land practices, such as cover cropping, composting, limited tillage, and high-efficiency irrigation. These practices build soil organic matter, reduce chemical usage, enhance the property's natural elements, and contribute to carbon neutrality on the property.

*Sustainable Agriculture Use*

*Soil quality:* The property's soils are classified as Prime Farmland.

*Co-Benefits*

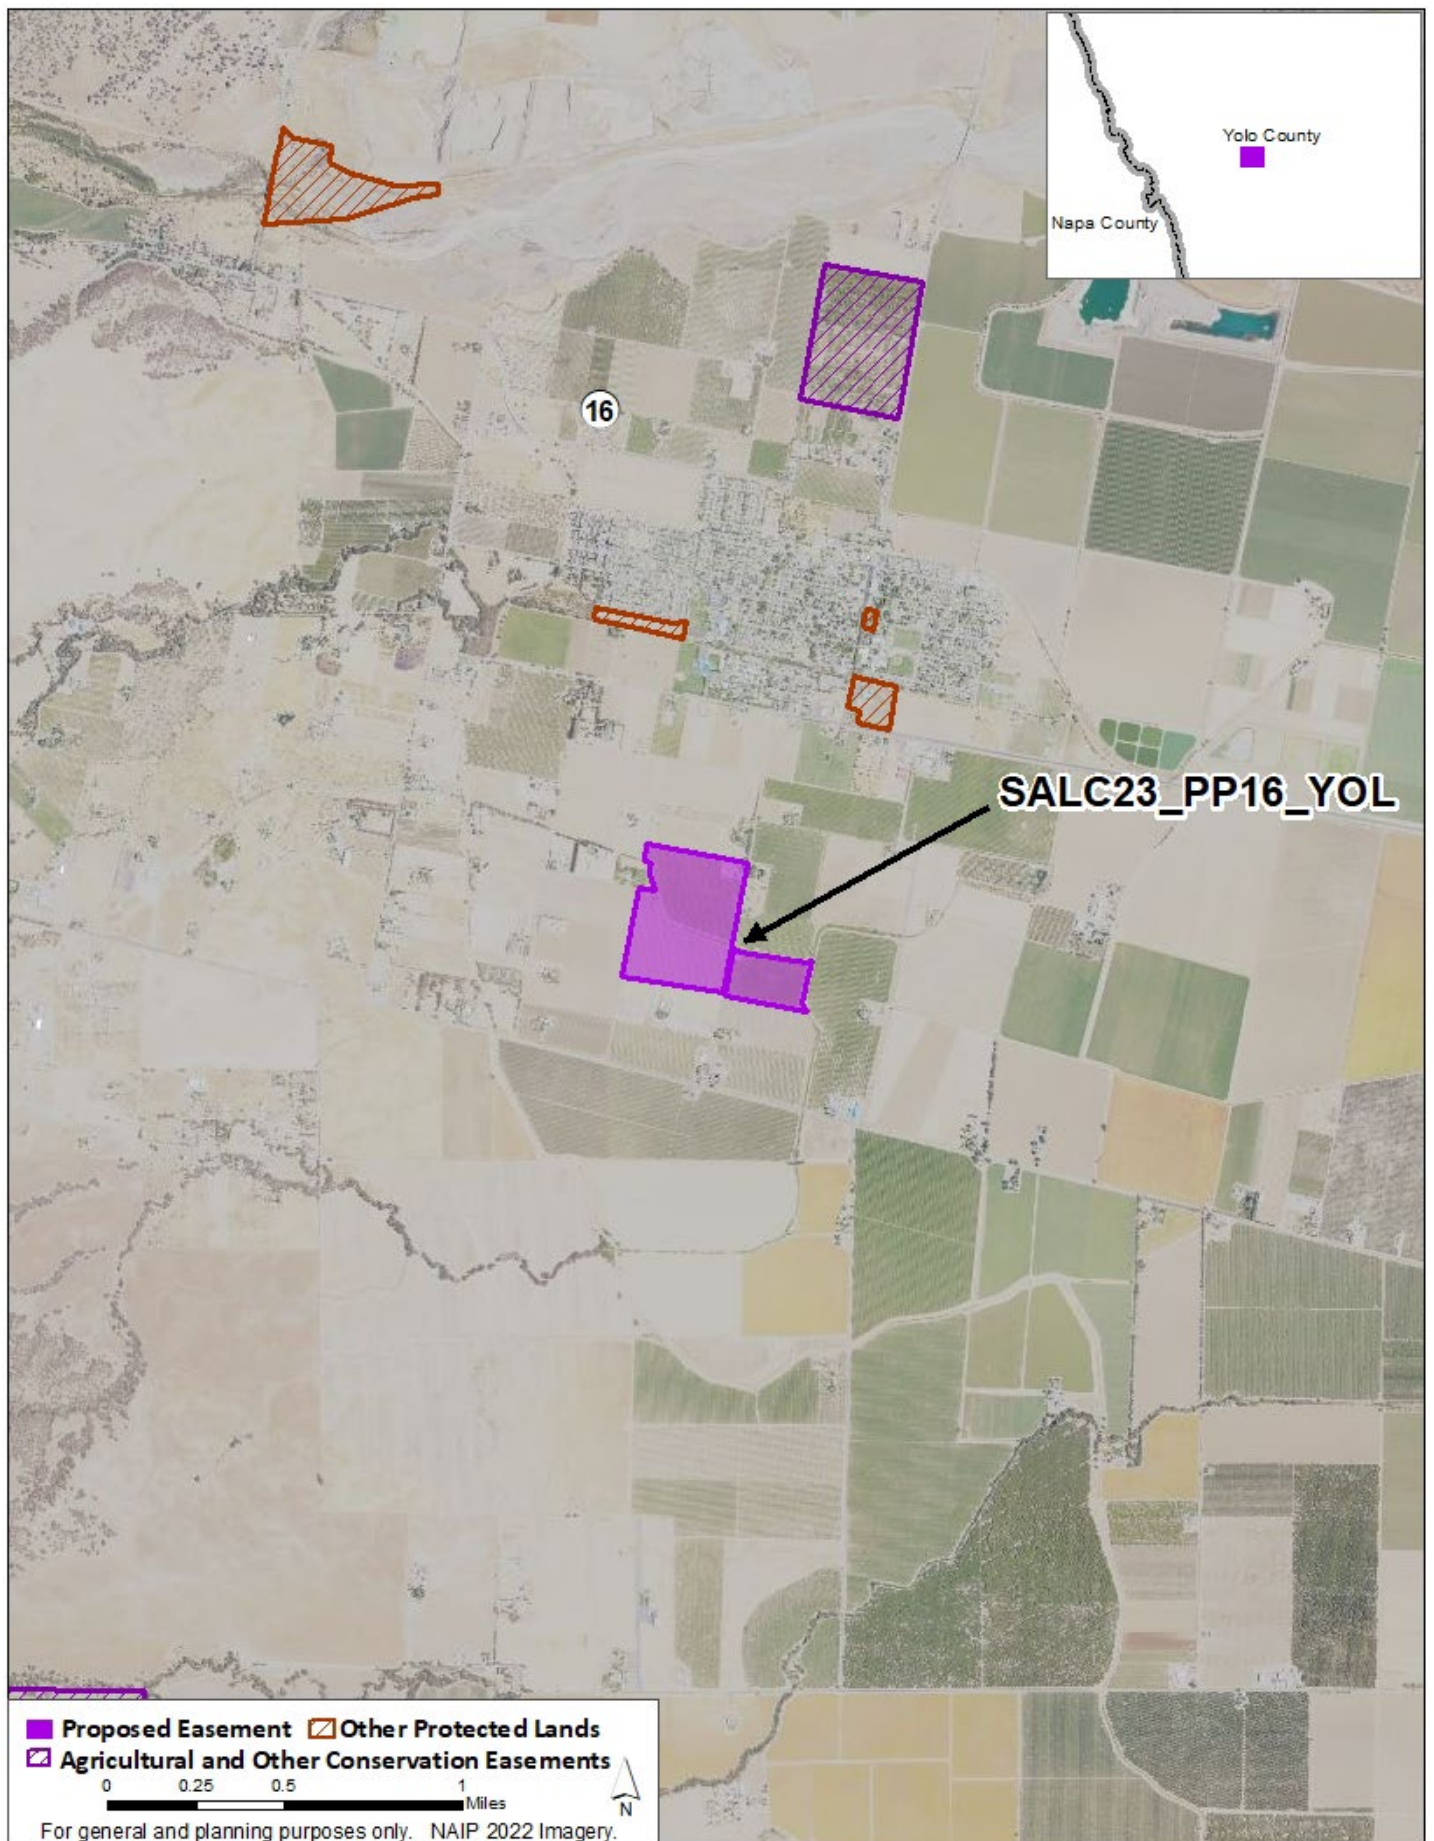

*Biodiversity:* The orchard is bordered with native hedgerows and approximately 3 acres of riparian corridor. These features attract beneficial insects, birds and small mammals. The landowner also incorporates bat boxes throughout the property.

**Notable Features**

The project is located within a low-income community.

**Project Description**

The project is for the acquisition of a conservation easement on a ±156-acre property in Yolo County. The soils are classified as Prime Farmland and comprise French prune orchards, dry-farmed grain, and a riparian corridor. On-site wells, surface water access, and riparian rights provide sufficient water to the agricultural operation.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* This project would prevent rural residential development and would support infill in the nearby community of Winters.

*Climate Resilience*

*Climate Smart Management Practice:* The landowner implements several sustainable land practices, such as cover cropping and composting. The adjacent field is dry farmed with reduced chemical use and minimal soil disturbance to prevent impacts on the riparian corridor's natural biodiversity.

*Sustainable Agriculture Use*

*Soil quality:* The majority of the property consists of soils classified as Prime Farmland.

*Co-Benefits*

*Biodiversity:* This project protects about 13 acres of Putah Creek frontage, which provides habitat connectivity and a wildlife corridor for a variety of insects, fish, waterfowl, small mammals, and birds of prey.

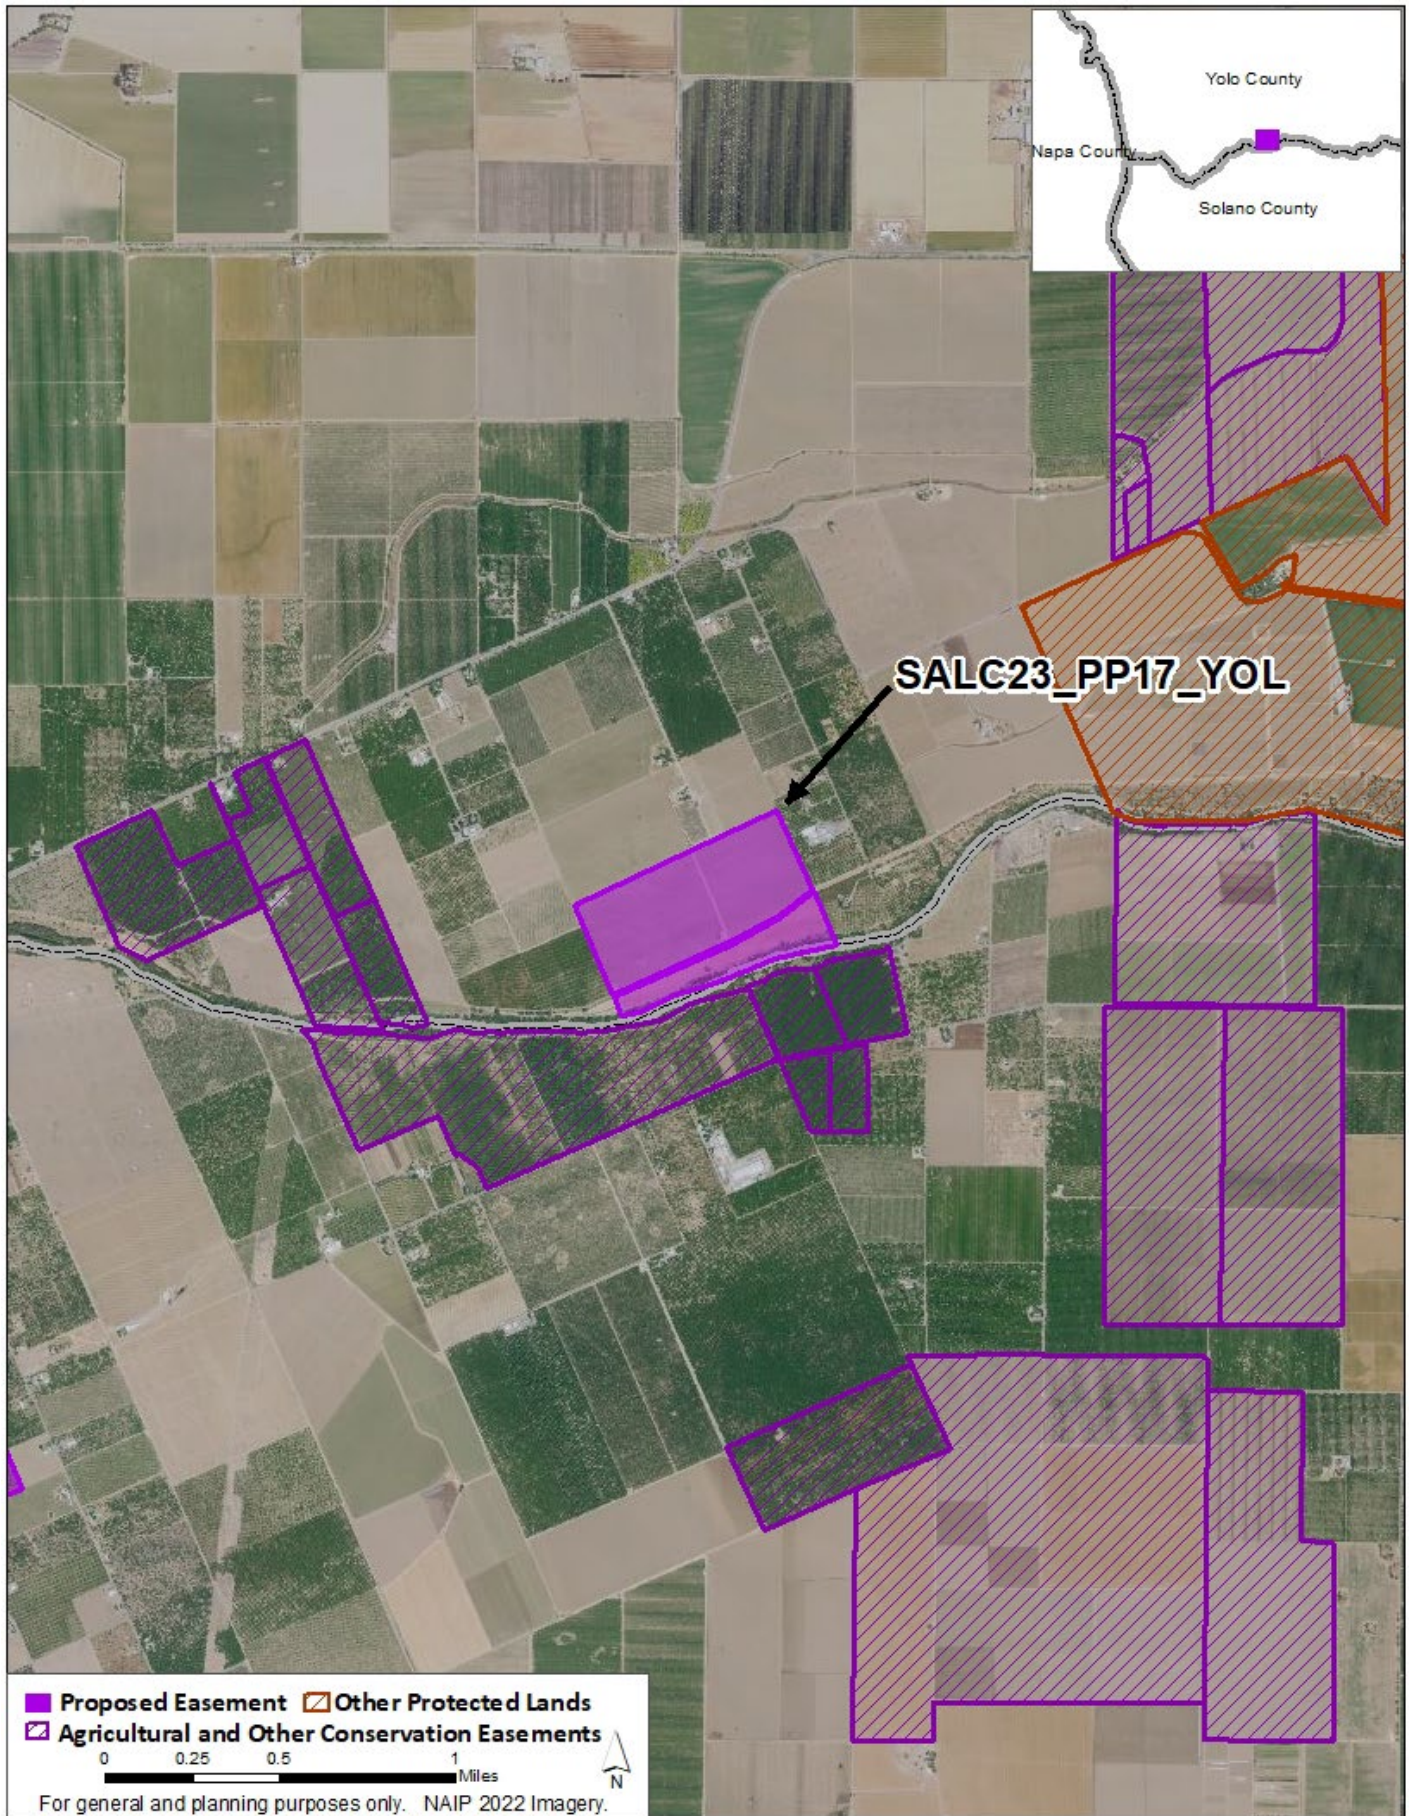

*Proximity to Protected Land:* This project is situated alongside several other conservation easements along Putah Creek. With approximately 1,787 acres on the south side and 592 acres on the north side of the creek.

**Project Description**

This project is for the acquisition of two conservation easements on a ±479-acre property in Yolo County. The soils are classified as Prime Farmland. The property supports year-round cultivation of various row crops, including safflower, tomatoes, corn, and wheat. Crops are processed utilizing local businesses. Onsite wells and surface water deliveries support the agricultural operation.

**Strategic Value**

*Climate Resilience*

*Climate Smart Management Practices:* The project will contribute to carbon neutrality through soil carbon sequestration via composting, limited tilling, and periodic planting of cover crops.

*Sustainable Agriculture Use*

*Water Management Practices:* Buried drip line irrigation helps control water use.

*Co-Benefits*

*Economic Sustainability and Food Security:* The agricultural operation supports food security and contributes to the State's agricultural economy.

*Biodiversity:* Hedgerows planted along farm roads and farmstead areas include native scrubs, grasses, and trees to attract pollinators and various species.

*Proximity to Protected Lands:* The property is near 3,500 acres of protected habitat and rangeland.

**Notable Features**

Staff recommends funding \$93,200 requested for associated costs. Program guidelines permit applicants to request more than \$60,000 if the costs are "commensurate with the work needed to complete the project".

**Project Description**

This easement acquisition project is for a 9,872-acre ranch located within a 20-minute drive of the City of Madera. The ranch has been family-owned and operated since the 1920s. The family runs a year-round cow/calf operation with approximately 120 head, alongside a seasonal stocker operation involving 3,200 to 4,000 head during the winter season. The grazing operation is supported by ample water resources on the ranch.

**Strategic Value***Infill and Compact Development*

*Infill and Compact Development:* The ranch is less than 15 minutes from numerous unincorporated rural residential communities on the outskirts of the City of Madera, which is located 20 minutes away and the nearest high-density job center.

*Climate Resilience*

*Climate Smart Management Practices:* Grazing the property reduces the risk of catastrophic wildfire by reducing fuel loads on the property.

*Co-Benefits*

*Biodiversity:* The large ranch contains rich water resources and falls within an area designated by the Sierra Nevada Foothills Wildlife Connectivity Project as "Irreplaceable and Essential Corridor". According to the Applicant, RePlan identifies the ranch as very high in terrestrial intactness.

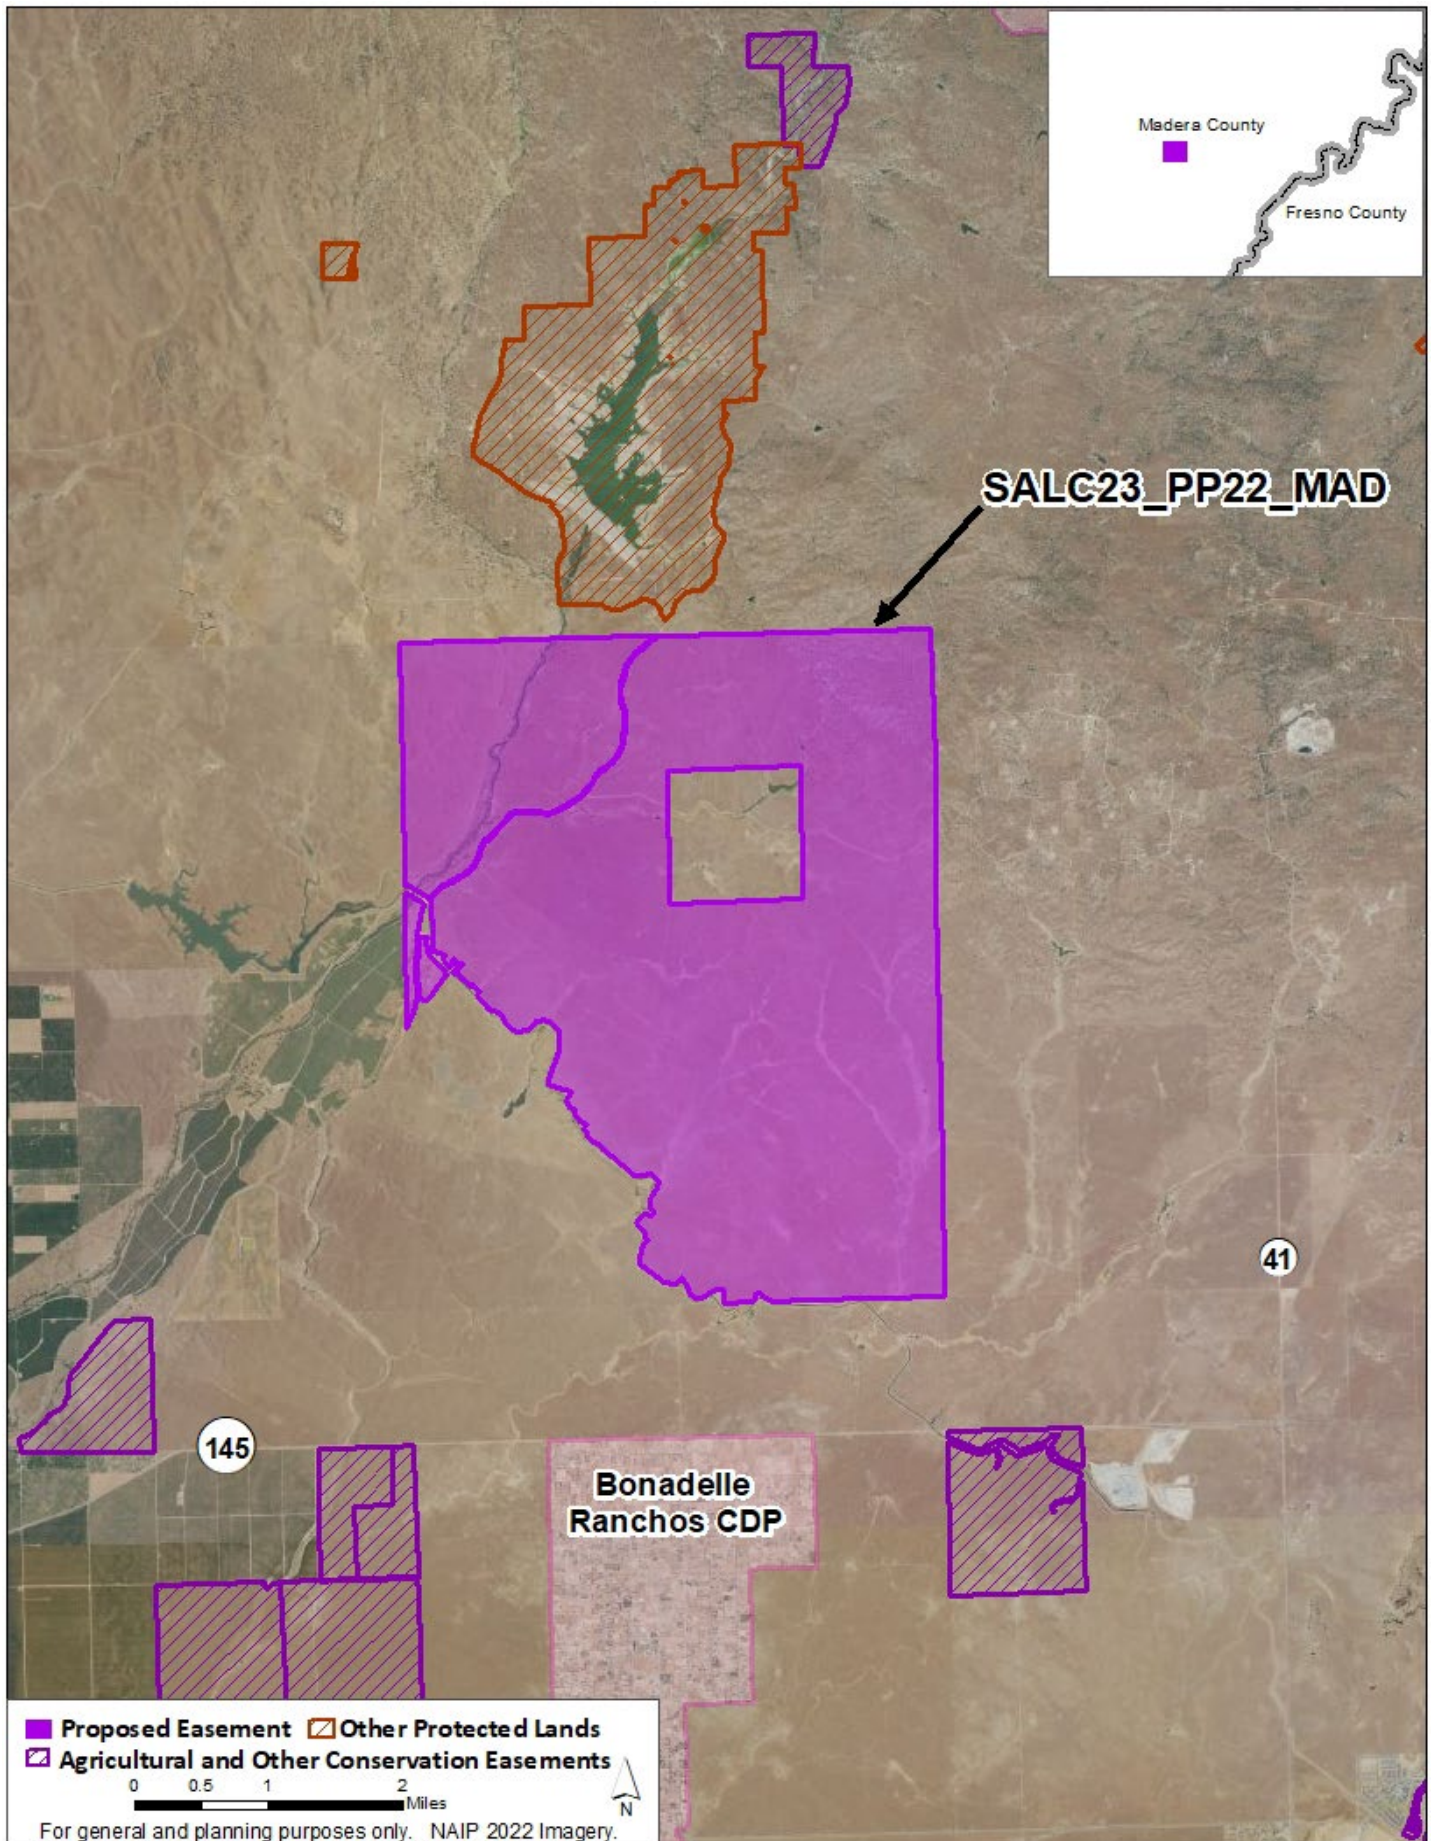

*Economic:* Creation of local jobs and support of local farm services.

**Notable Features**

The conservation easement will restrict agricultural intensification.

**Project Description**

The project is for the purchase of a conservation easement on a ±280-acre property in Imperial County. The farm is comprised of two contiguous parcels and cultivates a diverse portfolio of crops, such as alfalfa, sugar beets, onions, and wheat. Crops are sold to regional, national, and international markets in Asia, the Middle East, and the Americas through established distribution channels. The property is comprised of soils of Farmland of Statewide Importance and has a secure water source through the Imperial Irrigation District.

**Strategic Value***Infill and Compact Development*

*Infill/Compact Development:* The project supports infill and compact development by establishing a permanent agricultural buffer less than three-quarters of a mile from the Brawley Greenbelt. This will help prevent “leapfrogging” development patterns cited as a concern in the Imperial County General Plan.

*Co-Benefits*

*Biodiversity:* The project is located south of the Salton Sea and directly within the Pacific Flyway, which is one of Audubon Society's Important Bird Areas (IBA) of Global Significance. Environmental benefits include protecting biodiversity through the preservation of numerous species that use the farmland as habitat, as well as contributing to carbon neutrality and climate resilience.

**Notable Features**

The project includes development and implementation of a SALC-funded management plan.

**Project Description**

The project is for the acquisition of a conservation easement on a ±1,339-acre property in Placer County. The property is planted to rice and its soils are classified as Prime Farmland and Farmland of Statewide Importance. On-site wells and surface water access provide sufficient water access to the property.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* This project would prevent rural residential development and would support infill in the nearby cities of Wheatland and Lincoln.

*Sustainable Agriculture Use*

*Soil quality:* Most of the property is comprised of soils that are classified as Prime Farmland and Farmland of Statewide Importance.

*Co-Benefits*

*Biodiversity:* The project protects habitat for waterfowl along the Pacific Flyway and the Central Valley Steelhead.

Provides secure land tenure  
to a farmer who is a resident  
of a priority population

**Project Description**

This project is for the purchase of a conservation easement on a ±347-acre irrigated agricultural property in Imperial County. production of alfalfa, tomatoes, carrots, onions and watermelon. Typical crops include alfalfa, tomatoes, carrots, onions and watermelon. The property is distinguished by its high-quality Prime Farmland. The owner is a fifth-generation farmer who manages the growing, harvesting and selling of agricultural products. The intensive commercial farming operation is a significant contributor to the regional economy.

**Strategic Value***Equity*

*Secure Land Tenure:* The project would secure land tenure to a farmer who is a resident of a priority population.

*Sustainable Agriculture Use*

*Soil quality:* The property's soils are classified as Prime Farmland. The owner's implementation of sustainability practices to reduce emissions and provide conservation benefits will be documented with a Management Plan.

*Co-Benefits*

*Biodiversity:* The project is located south of the Salton Sea and directly within the Pacific Flyway, which is one of Audubon Society's Important Bird Areas of Global Significance. The environmental benefits include protecting biodiversity through the preservation of numerous species that use the farmland as habitat, as well as contributing to carbon neutrality and climate resilience through the planned establishment of enduring conservation measures on this working farm.

**Notable Features**

The project includes development and implementation of a SALC-funded management plan.

**Other Investment Targets**

A Tribal non-profit is the applicant/co-applicant

**Project Description**

The purchase of a fee acquisition of an approximately ± 221-acre property in Los Angeles County by a tribal non-profit for the purpose of tribal cultural practices. Proposed uses include tribal gatherings and ceremony, seed and native plant harvesting, a native nursery, and public outreach to education the community about tribal cultures.

**Strategic Value**

*Infill and Compact Development*

*Wildland Urban Interface:* The property's conservation would ensure the urban community of La Crescenta is buffered from the larger wildlands to the north of the property, providing necessary buffer for wildlife, fire, and watershed protection.

*Equity*

*Tribal Co-Management & Access:* The property would be stewarded by Tataviam Land Conservancy, a non-profit representing the Tataviam tribe.

*Priority Population Access:* The proposal includes public facing events and educational opportunities for the Los Angeles community, including underserved and priority populations.

*Co-Benefits*

*Biodiversity:* The property hosts plant and animal wildlife as well as critical riparian habitat in an otherwise built out community.

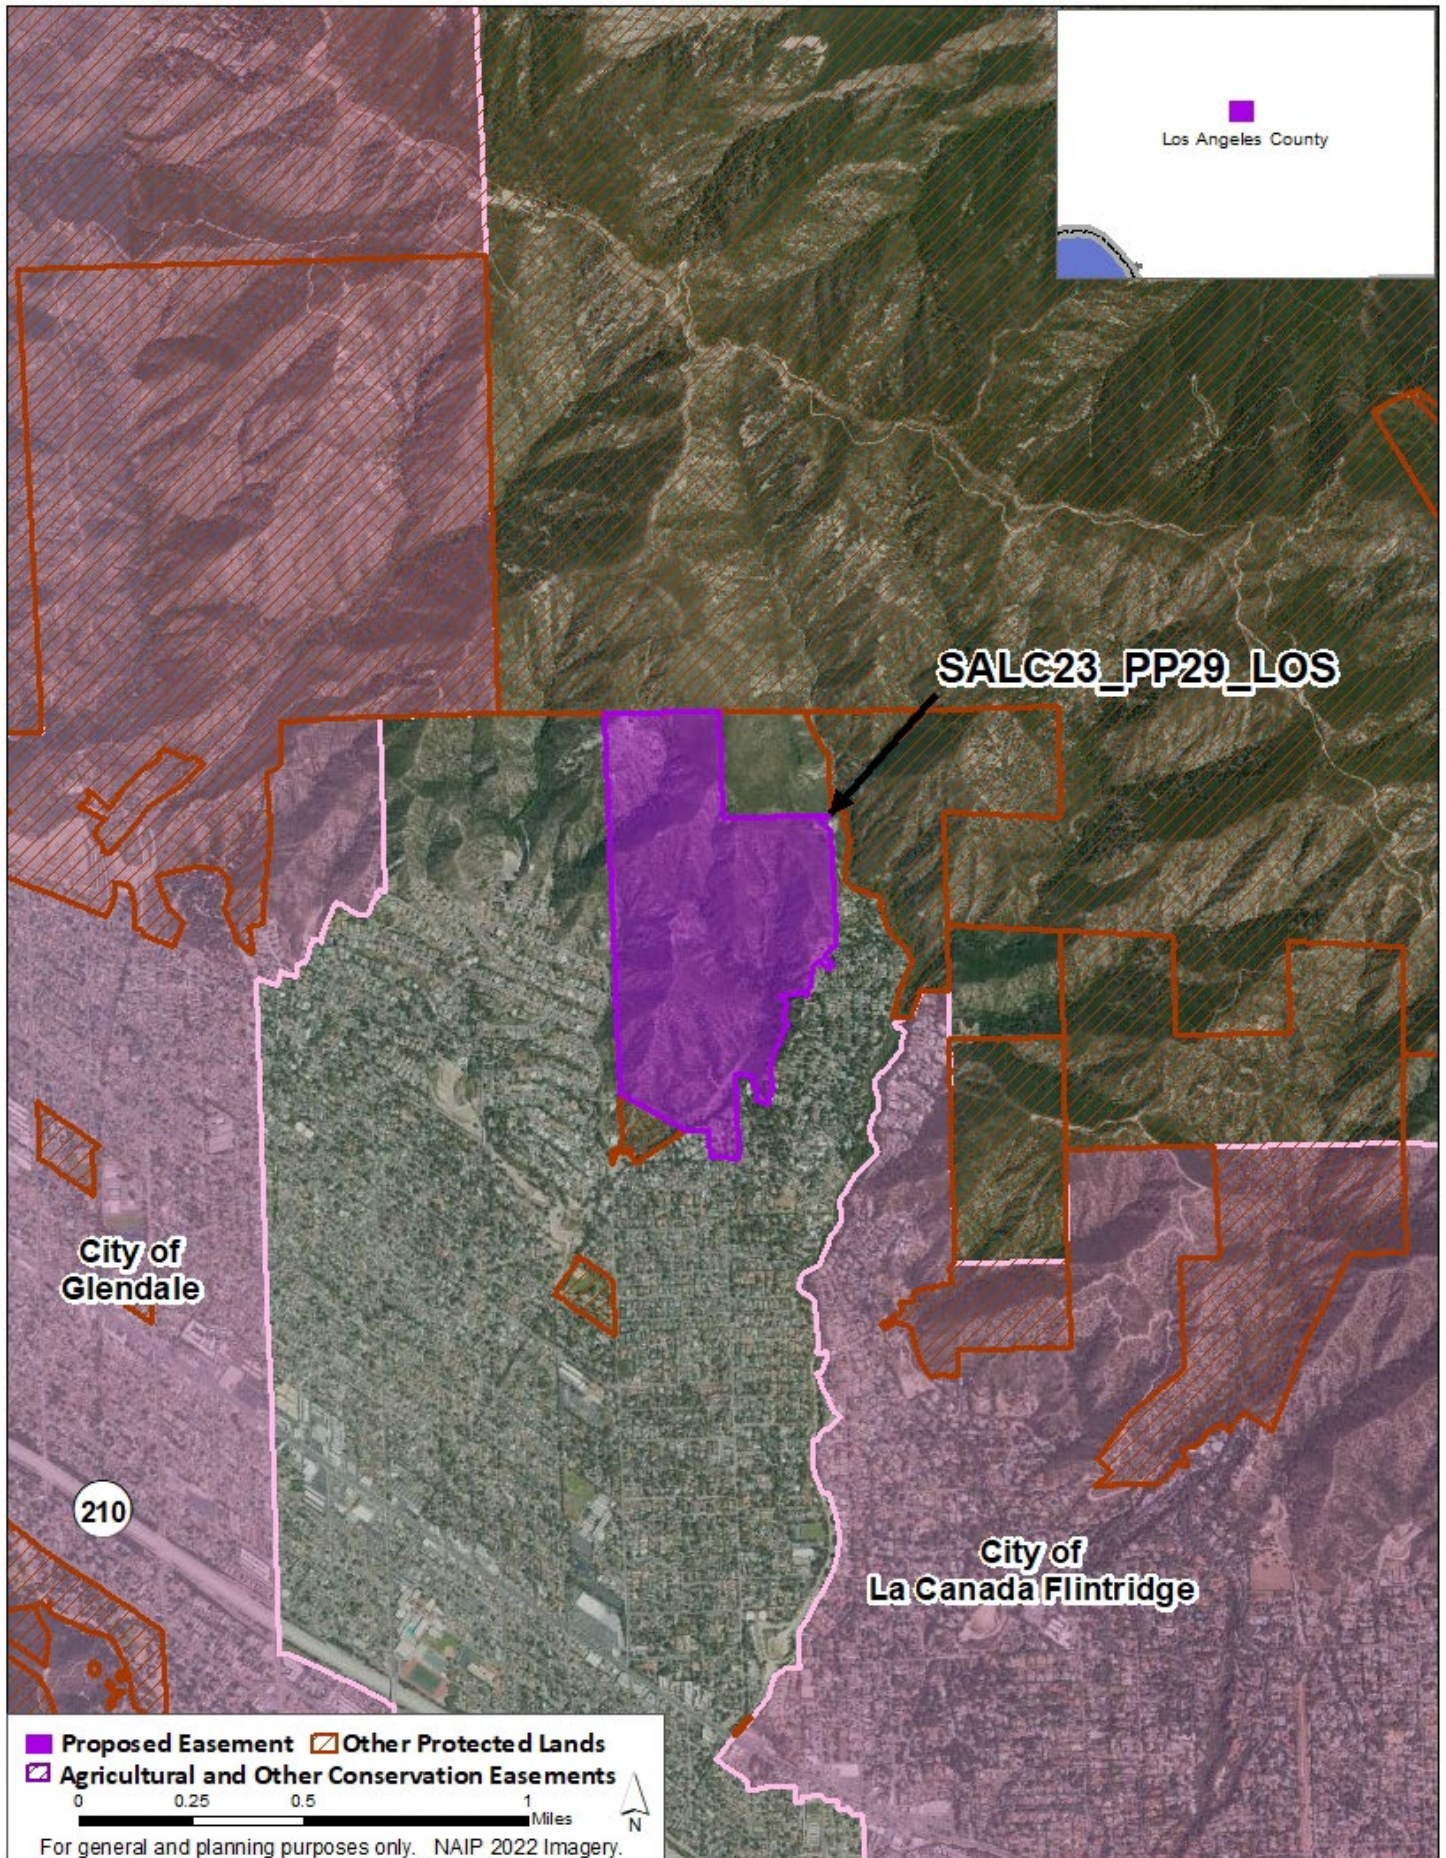

*Proximity to Protected Land:* The property abuts national forest lands and would add to an existing large acreage protected lands around the greater north and east Los Angeles cities.

**Notable Features**

An approximately 33,000 sq/ft encroachment from a neighboring property owner is currently being resolved via lot line adjustment. This will be required to remedied prior to close of escrow.

**Project Description**

This easement acquisition project is for a ±455-acre property located near the unincorporated community of Cottonwood. The property features annual grasslands, blue oak woodland, and 92 acres of irrigated pasture. The owner-operated rotational grazing operation is supported by abundant water resources and infrastructure, including access to district surface water. Approximately 70-100 head are grazed year-round on the property.

**Strategic Value***Infill and Compact Development*

*Infill and Compact Development:* The property is in an area with high demand for residential development, as evidenced by the residential development on the adjacent properties.

*Climate Resilience*

*Reducing Risk from Extreme Climate Events:* Applicant notes that the property could serve as a wildfire evacuation area for the nearby school and neighborhoods.

*Co-Benefits*

*Economic:* Creation of local jobs and support of local farm services. Beef is auctioned and processed locally.

*Biodiversity:* The property's oak woodlands support wildlife habitat.

*Scenic Viewshed:* The property provides scenic open space views to travelers on Gas Point Road and the surrounding community.

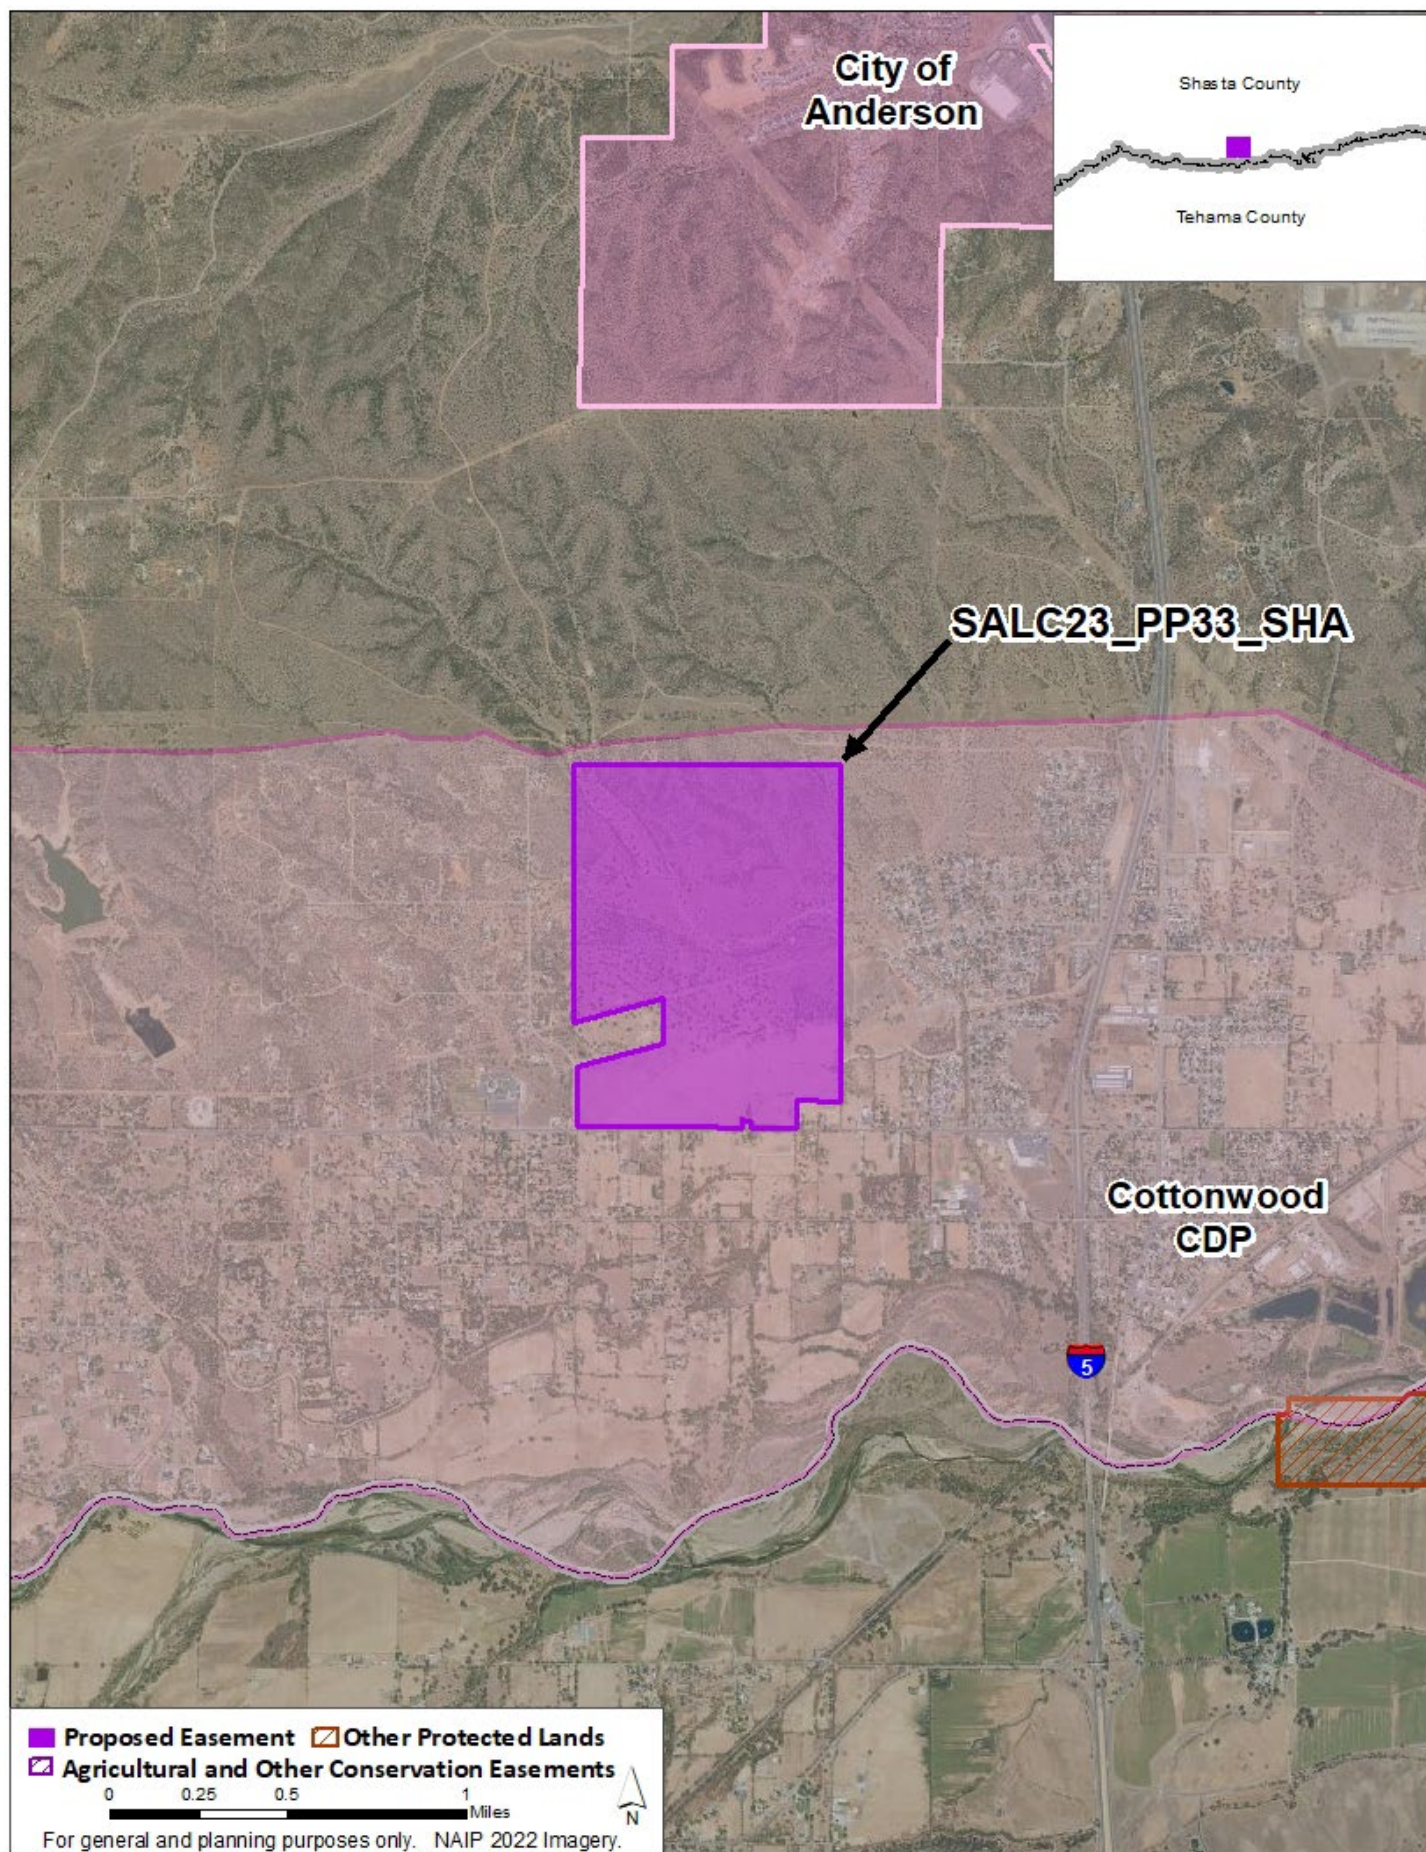

**Notable Features**

A third party maintains an option to construct a 15-acre solar farm on the ranch within a designated location. The solar farm would be managed by PG&E.

The project includes the development and implementation of a SALC-funded management plan.

**Other Investment Targets**

Provides secure land tenure  
to a farmer/rancher who is a  
Veteran

**Project Description**

The project is for the development of two conservation easements on a ±157-acre property in Stanislaus County. The soils are classified as Prime Farmland and the property is planted to many different tree nuts, such as almonds, walnuts, pistachios, pecans, chestnuts, and filberts. The property is also planted to a variety of stone fruits, including cherries, nectarines, peaches, apricots, pluots, plumcots, apriums, plums, and prunes, in addition to over 20 varieties of apples, pears, olives, and citrus. Products are sold in farmers markets throughout the Central Valley and the Bay Area, as well as through direct-to-consumer online sales.

**Strategic Value***Climate Resilience*

*Climate Smart Management Practices:* The project contributes to carbon neutrality through the sequestration of carbon in the trees grown on the property. Carbon also is incorporated into the soil via shredding of prunings, shells, hulls and other plant waste. The soil is so rich the landowners have not needed to import compost or fertilizer in years.

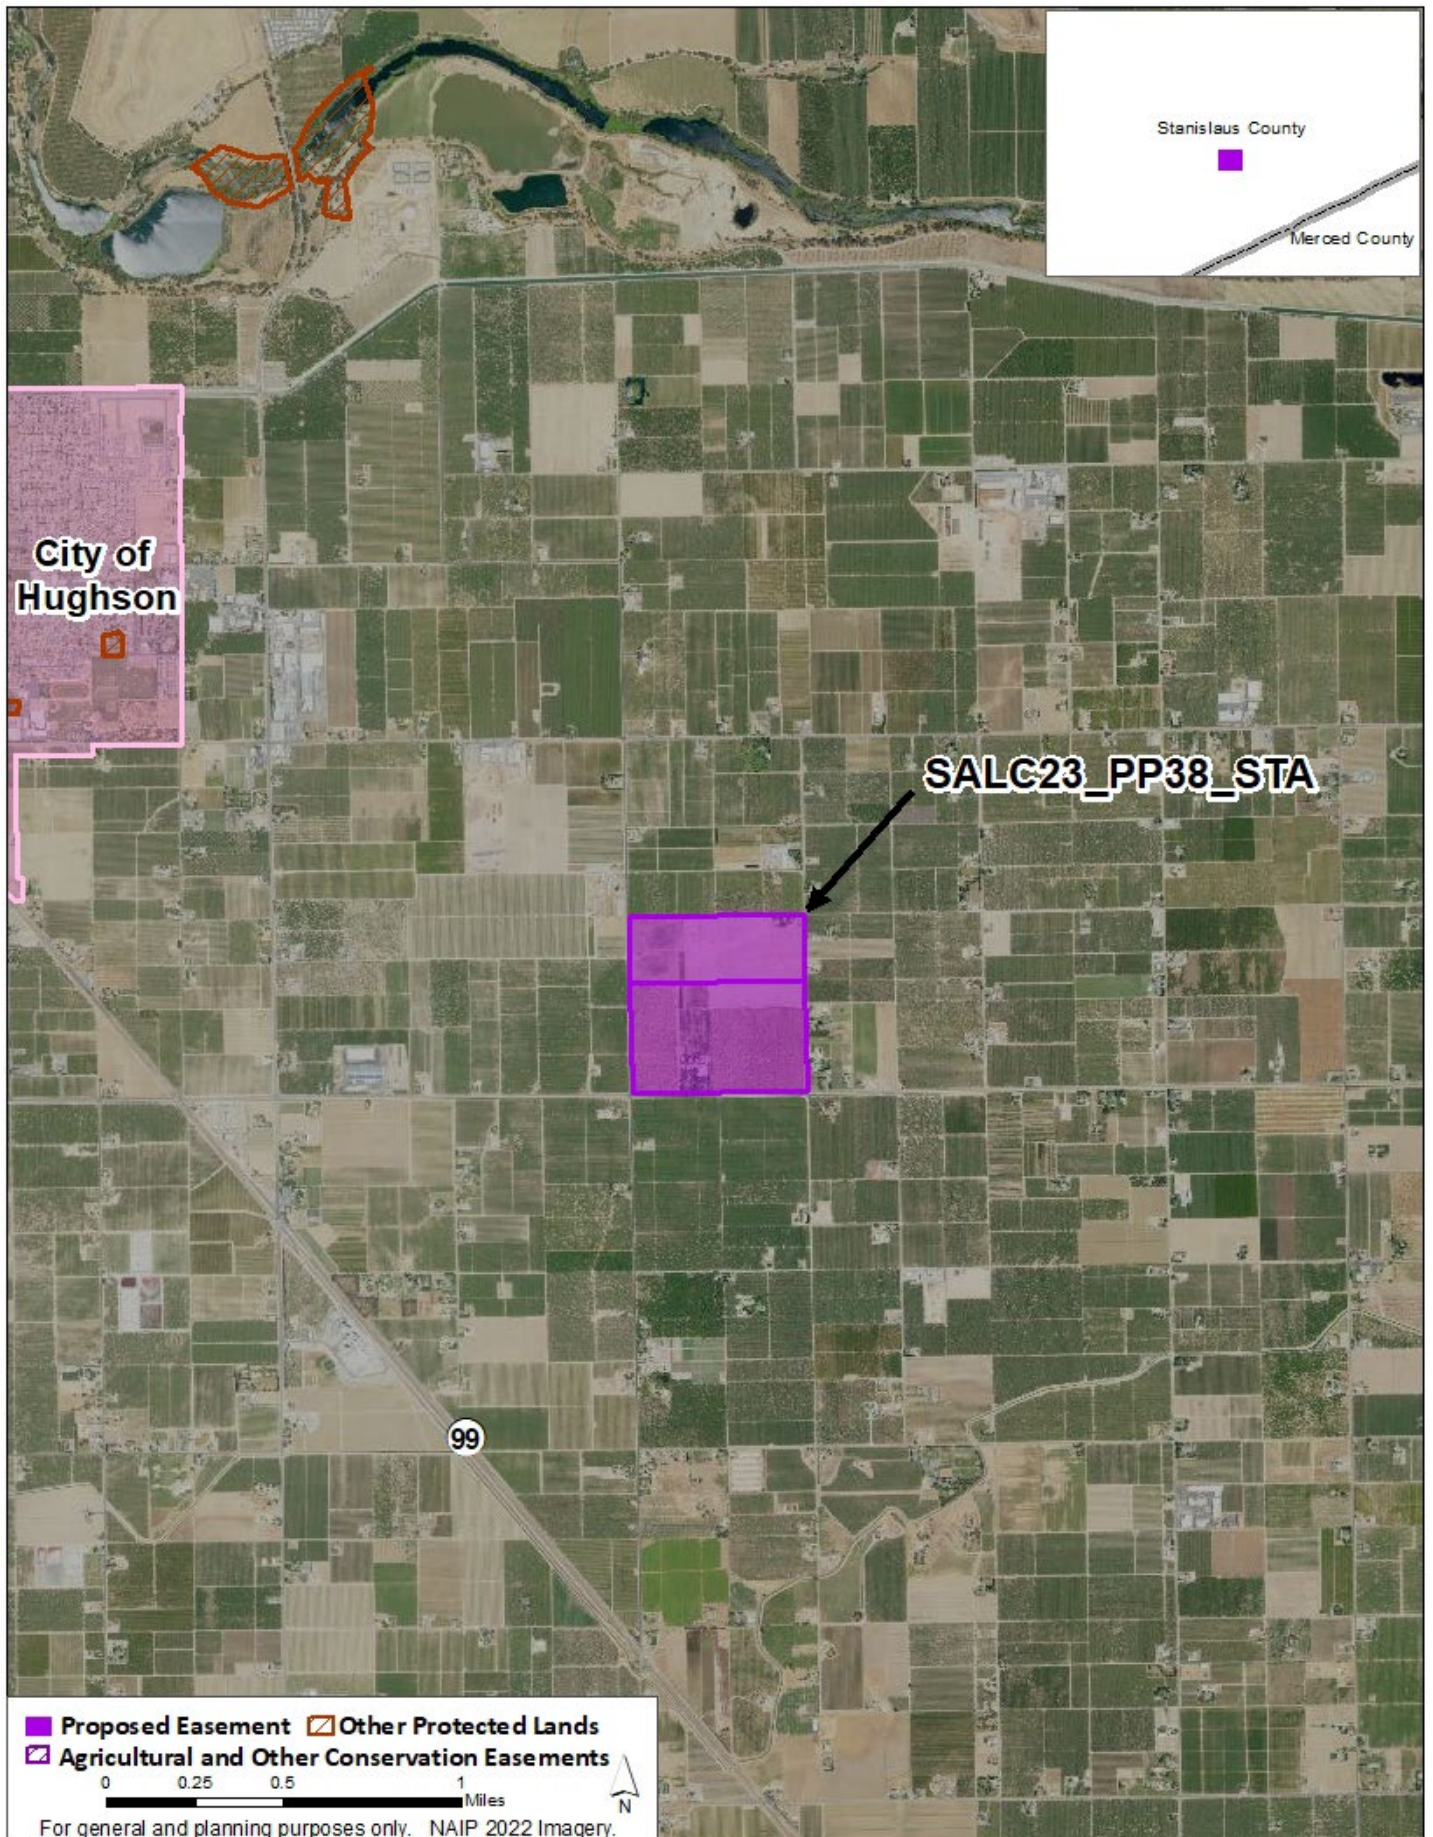

*Economic Sustainability and Food Security:* The project safeguards the State's economic sustainability and food security by providing unique agricultural employment opportunities, as well as providing a wide variety of healthy fruits and nuts to the all season long. Many of the varieties grown are culturally important to some groups and are not found elsewhere in the area. The operation's online direct-to-consumer market has grown significantly, and the property's dried fruits and nuts are shipped all across the country.

**Other Investment Targets**

None

**Project Description**

This conservation easement acquisition description is for ±69.2-acres of owner-operated irrigated farmland in the San Joaquin Basin of the mid Central Valley. The Farm is entirely planted with four varieties of almonds planted between 2006 and 2013.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* located between the growing unincorporated community of Delhi in Merced County and the City of Turlock in Stanislaus County

*Greenbelt/Community Separator:* Protection of this farm continues to build upon an existing greenbelt of working lands, safeguarding these productive lands from rapid development.

*Sustainable Agriculture Use*

*Soil quality:* 69% Farmland of Statewide Importance, 29% Prime Farmland, and 2% Unique Farmland. The landowner follows management practices which enhance soil health: Owl boxes reduce the need for chemical rodent control; annually applied compost reduces use of synthetic fertilizers; native plants throughout the farm create habitat and provide support for local pollinator populations.

*Water Management Practices:* The landowner uses micro drip irrigation via a soil moisture monitoring system for water use efficiency.

*Co-Benefits*

*Economic:* The Farm utilizes various local vendors and businesses to supply fertilizers, tools, and equipment; and employs local farmworkers.

*Biodiversity:* Hedgerows and cover crops with native plants contribute to pollinator habitat.

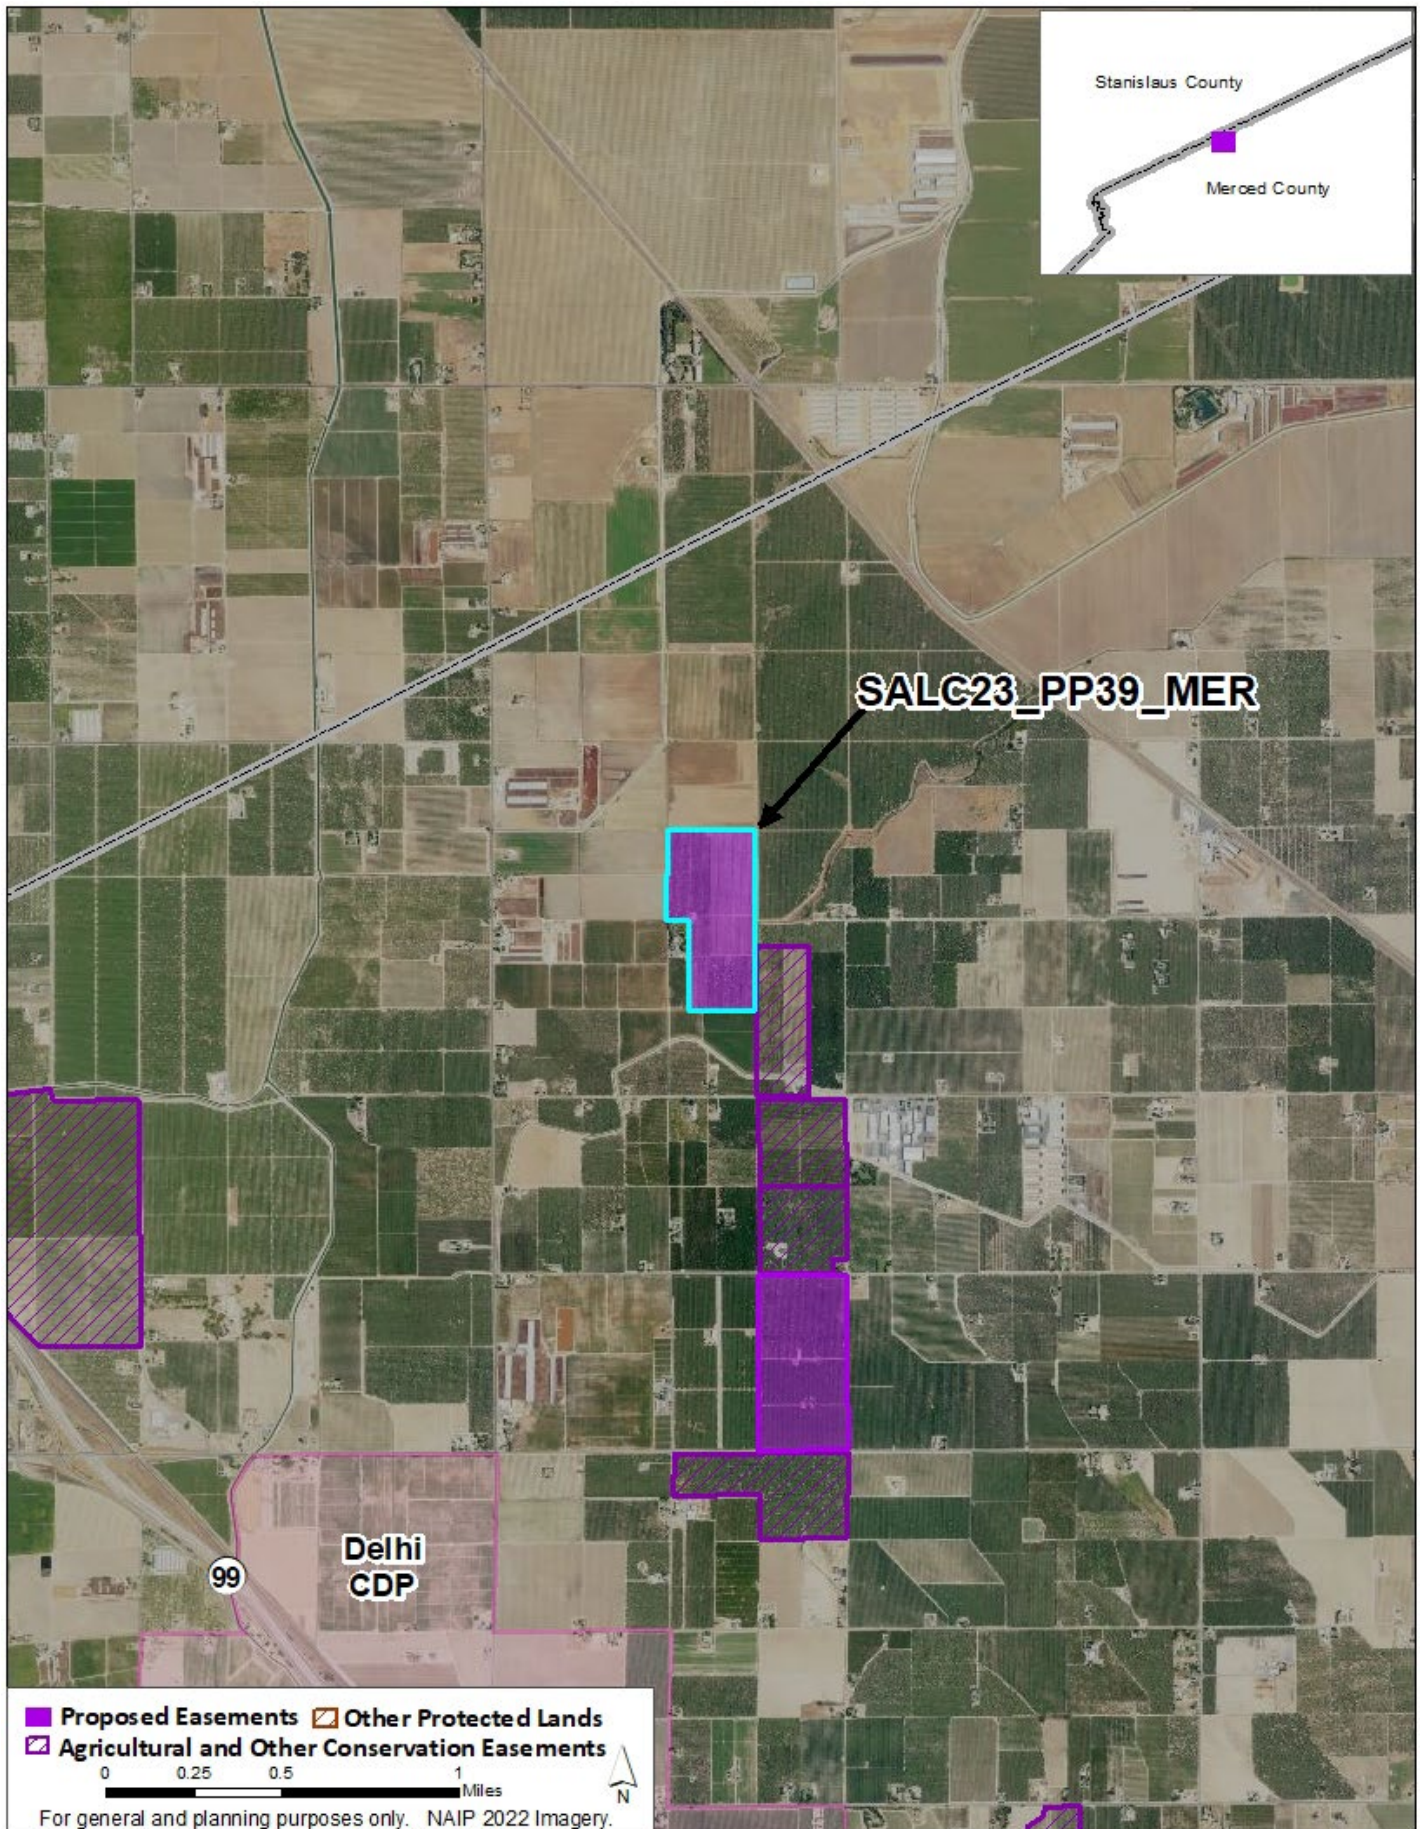

*Proximity to Protected Land:* This acquisition would contribute to a nearly two-mile-long greenbelt of protected properties to the northwest of the unincorporated community of Delhi.

**Project Description**

The project is a fee-title acquisition for a ± 79-acre property located in Humboldt County. The property contains culturally significant resources, such as native plants for the cultivation of traditional foods, herbal medicine, and fibers for basketry. The project will also support the continuation of the current cattle grazing operation. The project will support implementation of indigenous land management practices, preservation of cultural heritage, and utilization of traditional knowledge to steward the land.

**Strategic Value**

*Climate Resilience*

*Climate Smart Management Practices:* The project will support the implementation of a tidal wetland restoration plan for the property. The restoration of tidal wetlands will re-introduce native plant species specific to the region and increase biodiversity.

*Equity*

*Tribal Management & Access:* The project is led by a Tribe and will support secure land tenure for a California Native American Tribe.

*Co-Benefits*

*Biodiversity:* The property contains extensive wetlands and a coastal stream, providing riparian habitat for various species.

*Education:* The project will support partnerships with education institutions to host student capstone projects and graduate-level work, guided by Traditional Ecological Knowledge, for management and restoration.

**Notable Features**

Applied for Priority Populations Benefits.

**Project Description**

The project is for two easements spanning ±2,021 acres located 2 miles outside the town of Orcutt in Santa Barbara County. The ranch is leased for cattle grazing. The long-term lease holders maintain 90-100 head of cattle on the site year-round. Cattle are sold at auction in Santa Maria. Over 100 acres for future crop envelopes will be designated to accommodate agricultural intensification. These envelopes will be leased to local farmers. The property contains an adequate water supply to support the existing and future agricultural uses. An irrigation well located on the northern property provides water for both properties via formal water sharing agreement. Both properties also contain multiple water troughs and stock ponds.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is located 2 miles from Orcutt and is adjacent to the proposed Solomon Hills development plan, which may include approximately 4,000 residential units.

*Co-Benefits*

*Biodiversity:* The property contains approximately 2,000 acres of coastal shrub, annual grasslands, and coastal oak woodlands that serve as important wildlife habitat for species such as the California tiger salamander.

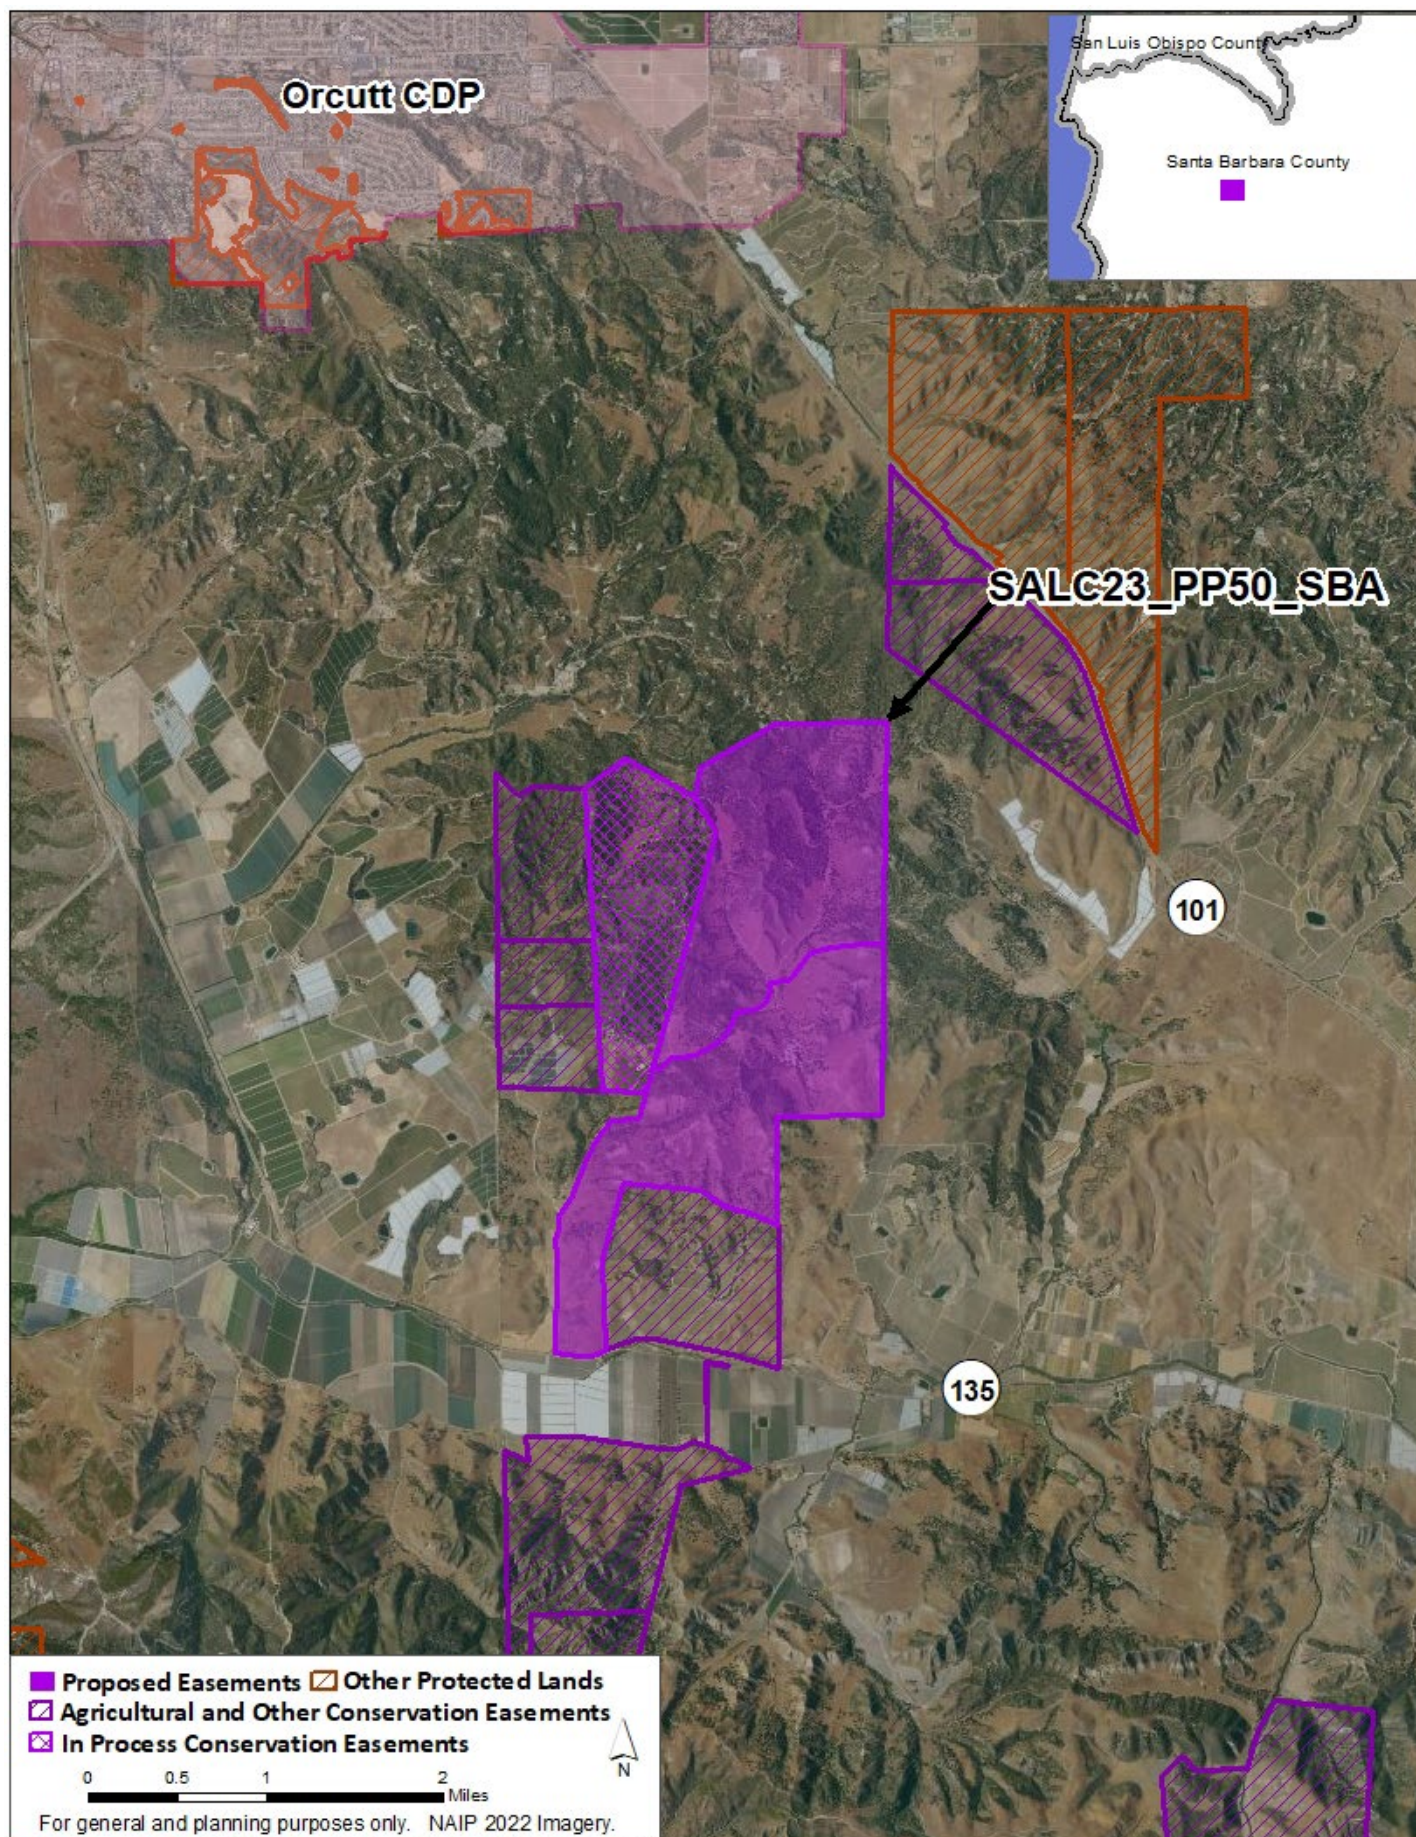

*Proximity to Protected Land:* Protection of the property would add to over 6,000 acres of protected land in this region.

**Project Description**

This project is for a ±412-acre easement acquisition located adjacent and partly within the City of Gilroy. The property contains ~400 acres of Prime Farmland and Farmland of Statewide Importance. The property is leased out to a long-time lessee who rotates crops on site as well as operates the land adjacent to the property. It is currently planted to corn, squash, garlic, peas, and more. Water is provided through 5 active wells. Products are sold to local and regional markets.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is adjacent and partly within the city boundary of Gilroy. The property could be subdivided into approximately 20 legal lots. Protection of the property would protect vital prime farmland in Gilroy from being developed into residential housing.

*Greenbelt/Community Separator:* The property would help build on the beginnings of a greenbelt between Gilroy and San Martin.

*Co-Benefits*

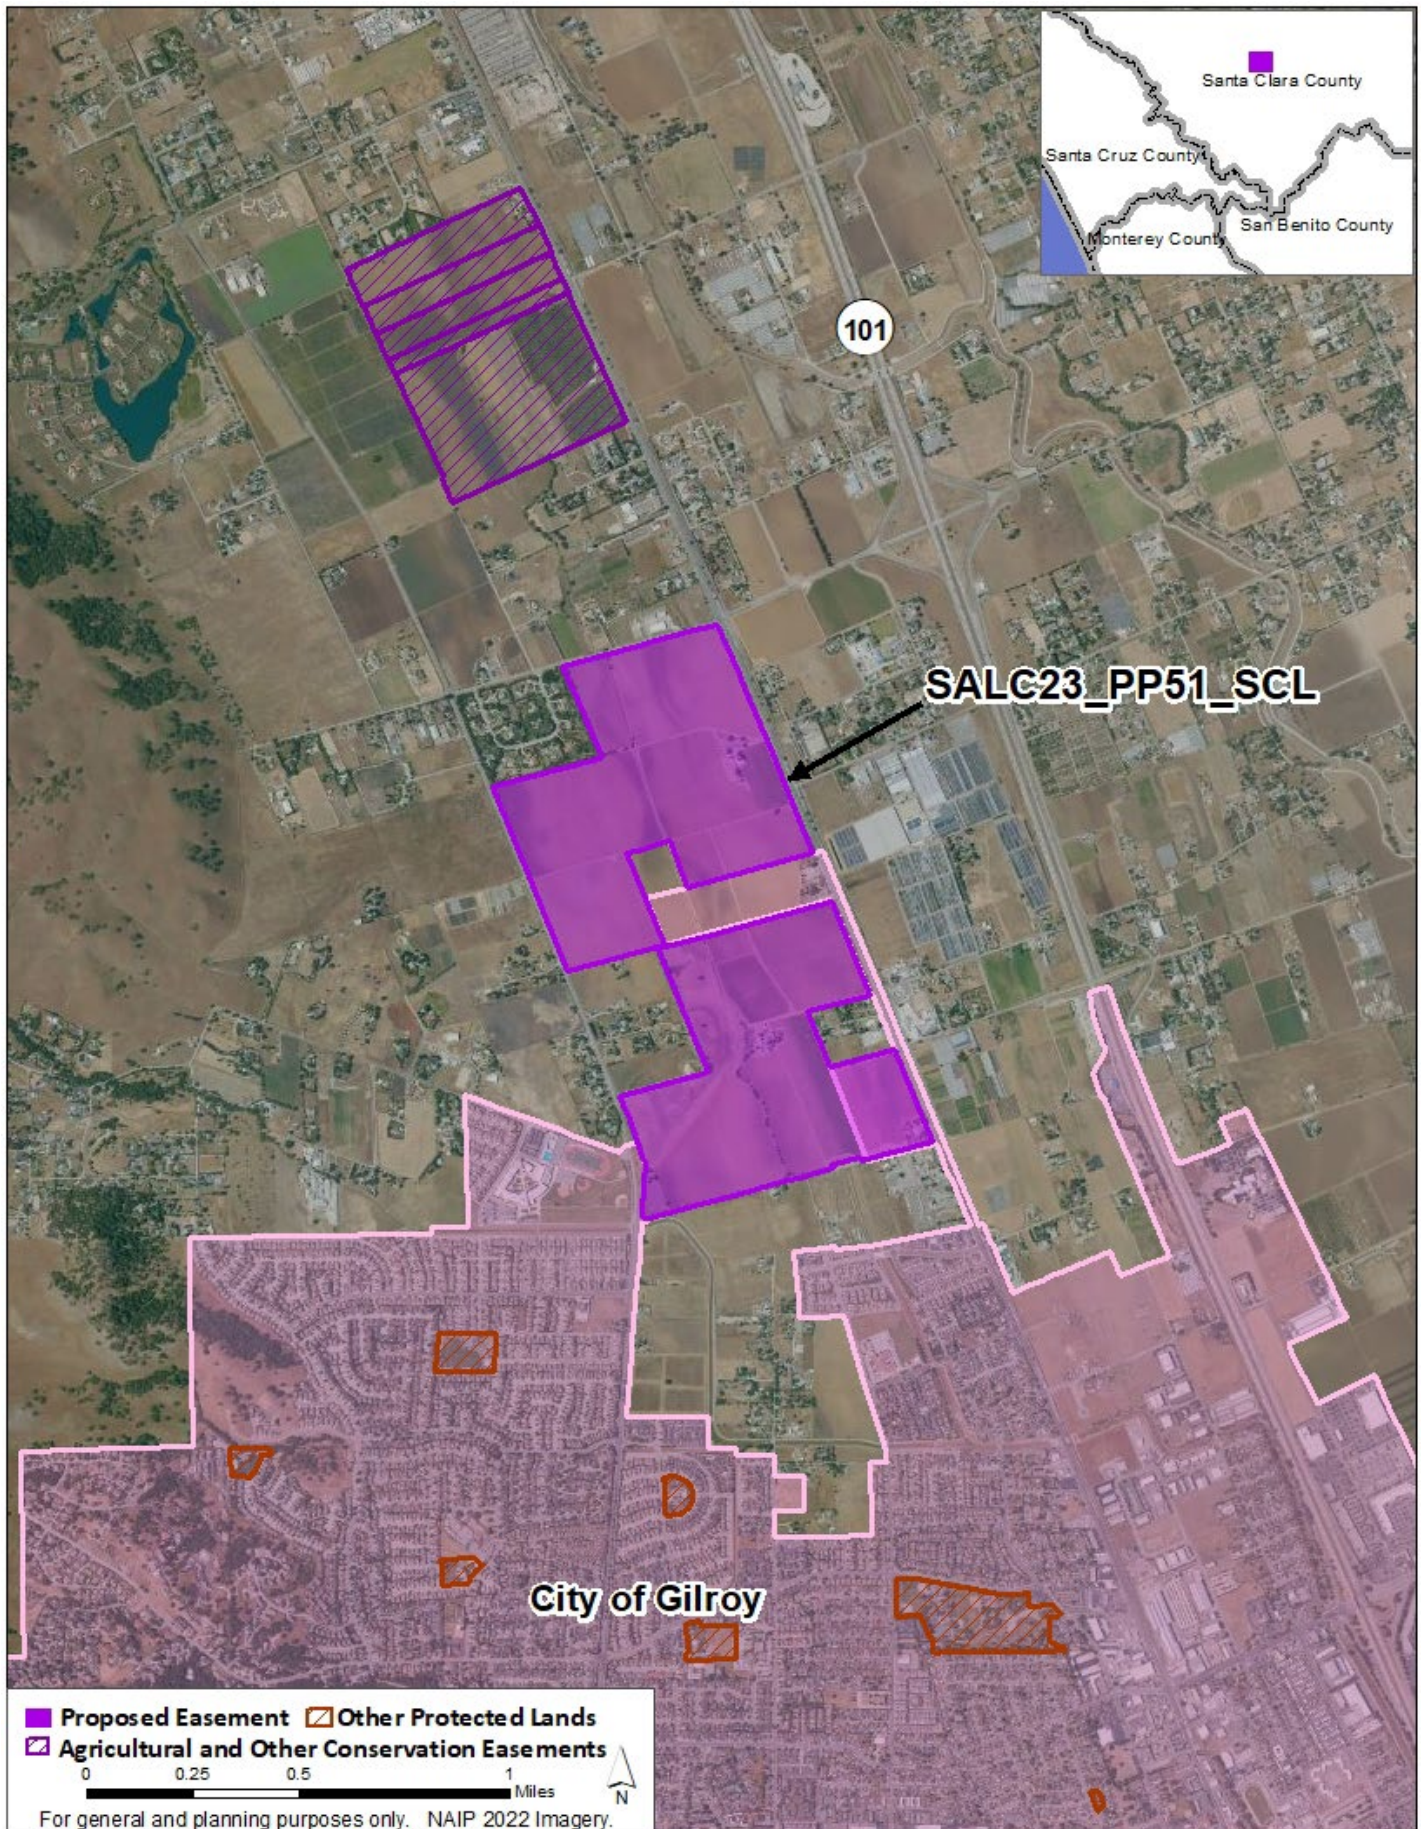

*Economic:* Protecting this land will help secure access to locally produced crops and help maintain agricultural viability.

**Notable Features**

Solar option agreement active on one parcel. If the option agreement is exercised, SALC will only cover 90% of the easement value for the remaining acres.

**Other Investment Targets**

Provides secure land tenure to a CA tribe

**Project Description**

Request for a fee acquisition by a California Native American Tribe for the purchase of a ±9,819-acre property in Monterey County. The property is a working cattle ranch with a year-round cow/calf operation of 350 to 450 pairs. The herd is raised as "all-natural, all-grass-fed beef", with calving in the fall. Stock is sold locally and via video market. The property also hosts approximately 6.9 acres of productive vineyard. The vineyard may be removed and replaced with culturally relevant agriculture or restoration. The Esselen Tribe of Monterey County intends to maintain current ranching activities and is in the process of developing a management plan for the property to ensure sustainable ranching practices alongside the cultural uses. In addition, potential plans for the property include agroforestry practices (including food forests), replanting traditional materials, tending culturally relevant species, and growing basketry materials.

**Strategic Value***Equity*

*Tribal Co-Management & Access:* In addition to tribal stewardship, the proposed project would include tribal burning and forest management to be led by tribal members as part of a work program.

*Secure Land Tenure:* The conservation of this property would secure land tenure to a California Native American tribe.

*Co-Benefits*

*Biodiversity:* The property hosts a variety of culturally significant features, flora and fauna to the tribe.

*Source Water Protection:* The property hosts the headwaters of two area watersheds and would ensure protection of both watersheds.

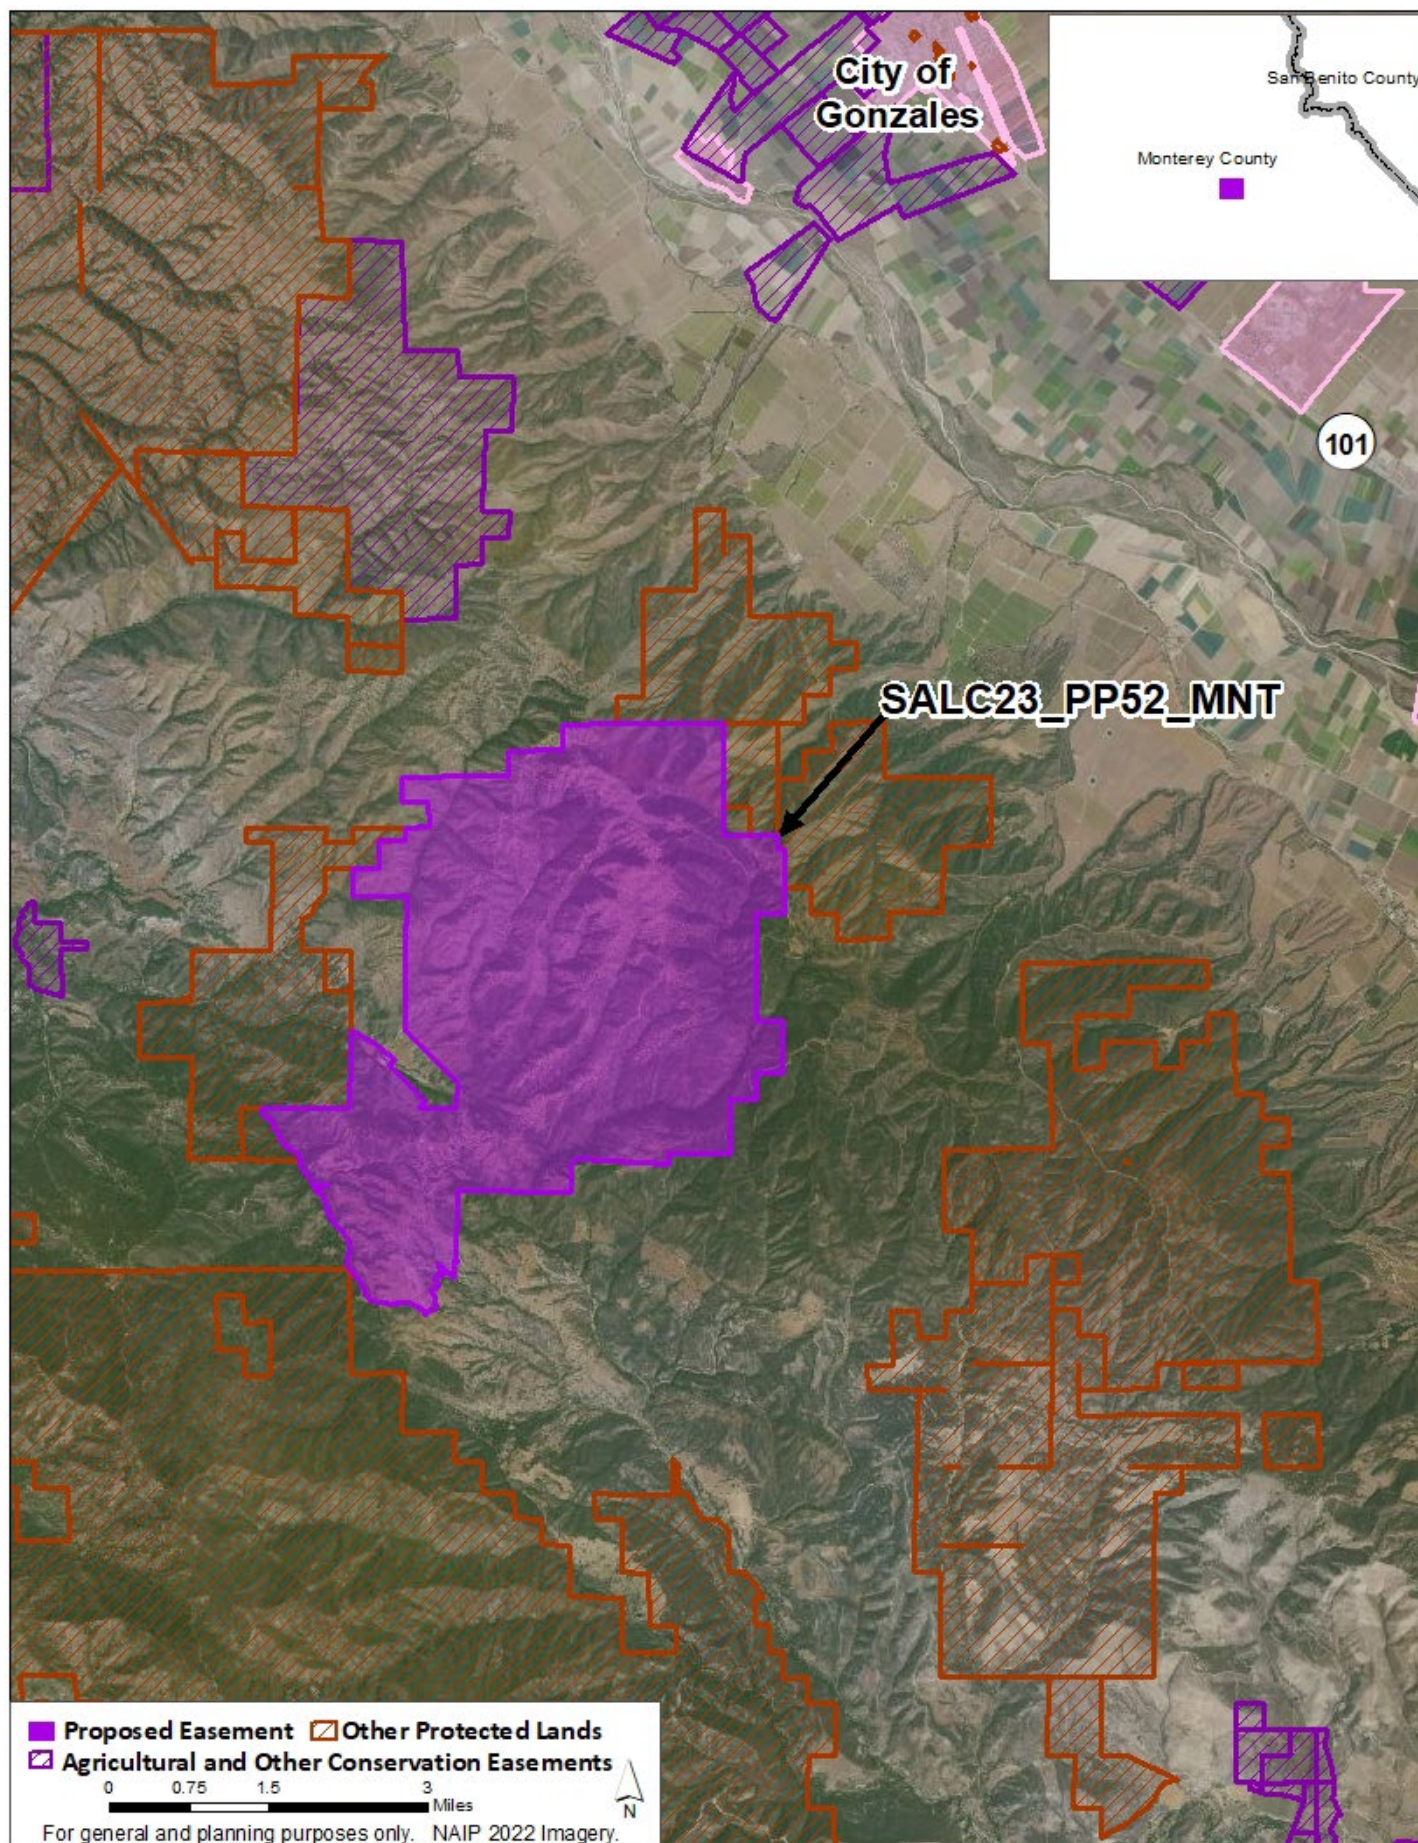

**Notable Features**

The project includes development and implementation of a SALC-funded management plan.

The property is comprised of 23 legal parcels with ability to develop up to 78 homesites. As proposed, acquisition of the property would extinguish 74 of these development rights.

**Other Investment Targets**

Provides secure land tenure  
to a farmer/rancher who is a  
Veteran

**Project Description**

This project is for the purchase of a conservation easement on a  
±16-acre property in San Luis Obispo County. The property is  
comprised of three 5-acre parcels and is less than 3 miles from the  
City of San Luis Obispo's city limit. The fertile soil and abundant  
water resources support the landowner's current cow/calf  
operation and have the potential to be used for row crops, wine  
grapes, orchards, or other specialty crop production. The property  
is part of a larger grazing operation in the region and hosts 10  
cow-calf pairs year-round.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* Conservation of the property will  
support infill and compact development within the City of San  
Luis Obispo and discourage residential sprawl into the  
agricultural community of Edna Valley.

*Greenbelt/Community Separator:* Conservation of the  
property will expand upon the City of San Luis Obispo's  
Greenbelt Protection Program.

*Co-Benefits*

*Economic:* Conservation of the property provides opportunity  
for affordable small agricultural acreage in an area with high  
land values due high value soils and proximity to agricultural  
markets.

**Notable Features**

Project will limit the size of the existing residence to not exceed  
2,000 square feet.

None

**Project Description**

This project is for the purchase of a conservation easement on a  
±199-acre property in San Luis Obispo County. The property is  
located less than 3 miles from the city limits of San Luis Obispo and  
contains soils classified as Prime Farmland and Farmland of  
Statewide Importance. The property is currently planted with  
avocados and provides forage for seasonal cattle grazing.  
Avocados from the property are marketed globally through major  
processors like Del Rey and Index Fresh. The avocados are prized  
locally and can be found at local farmers markets and grocery  
stores.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property's proximity to the  
City of San Luis Obispo and location within an existing  
agricultural corridor would make conservation valuable for  
supporting infill and avoiding sprawl into an agricultural area.

*Co-Benefits*

*Economic:* This project will help safeguard food security in San  
Luis Obispo County by ensuring that residents can continue to  
access fresh local produce. The project will support the  
economic sustainability of San Luis Obispo County agriculture  
by helping to maintain the economic viability of a productive  
agricultural property that would otherwise be a target for  
residential development.

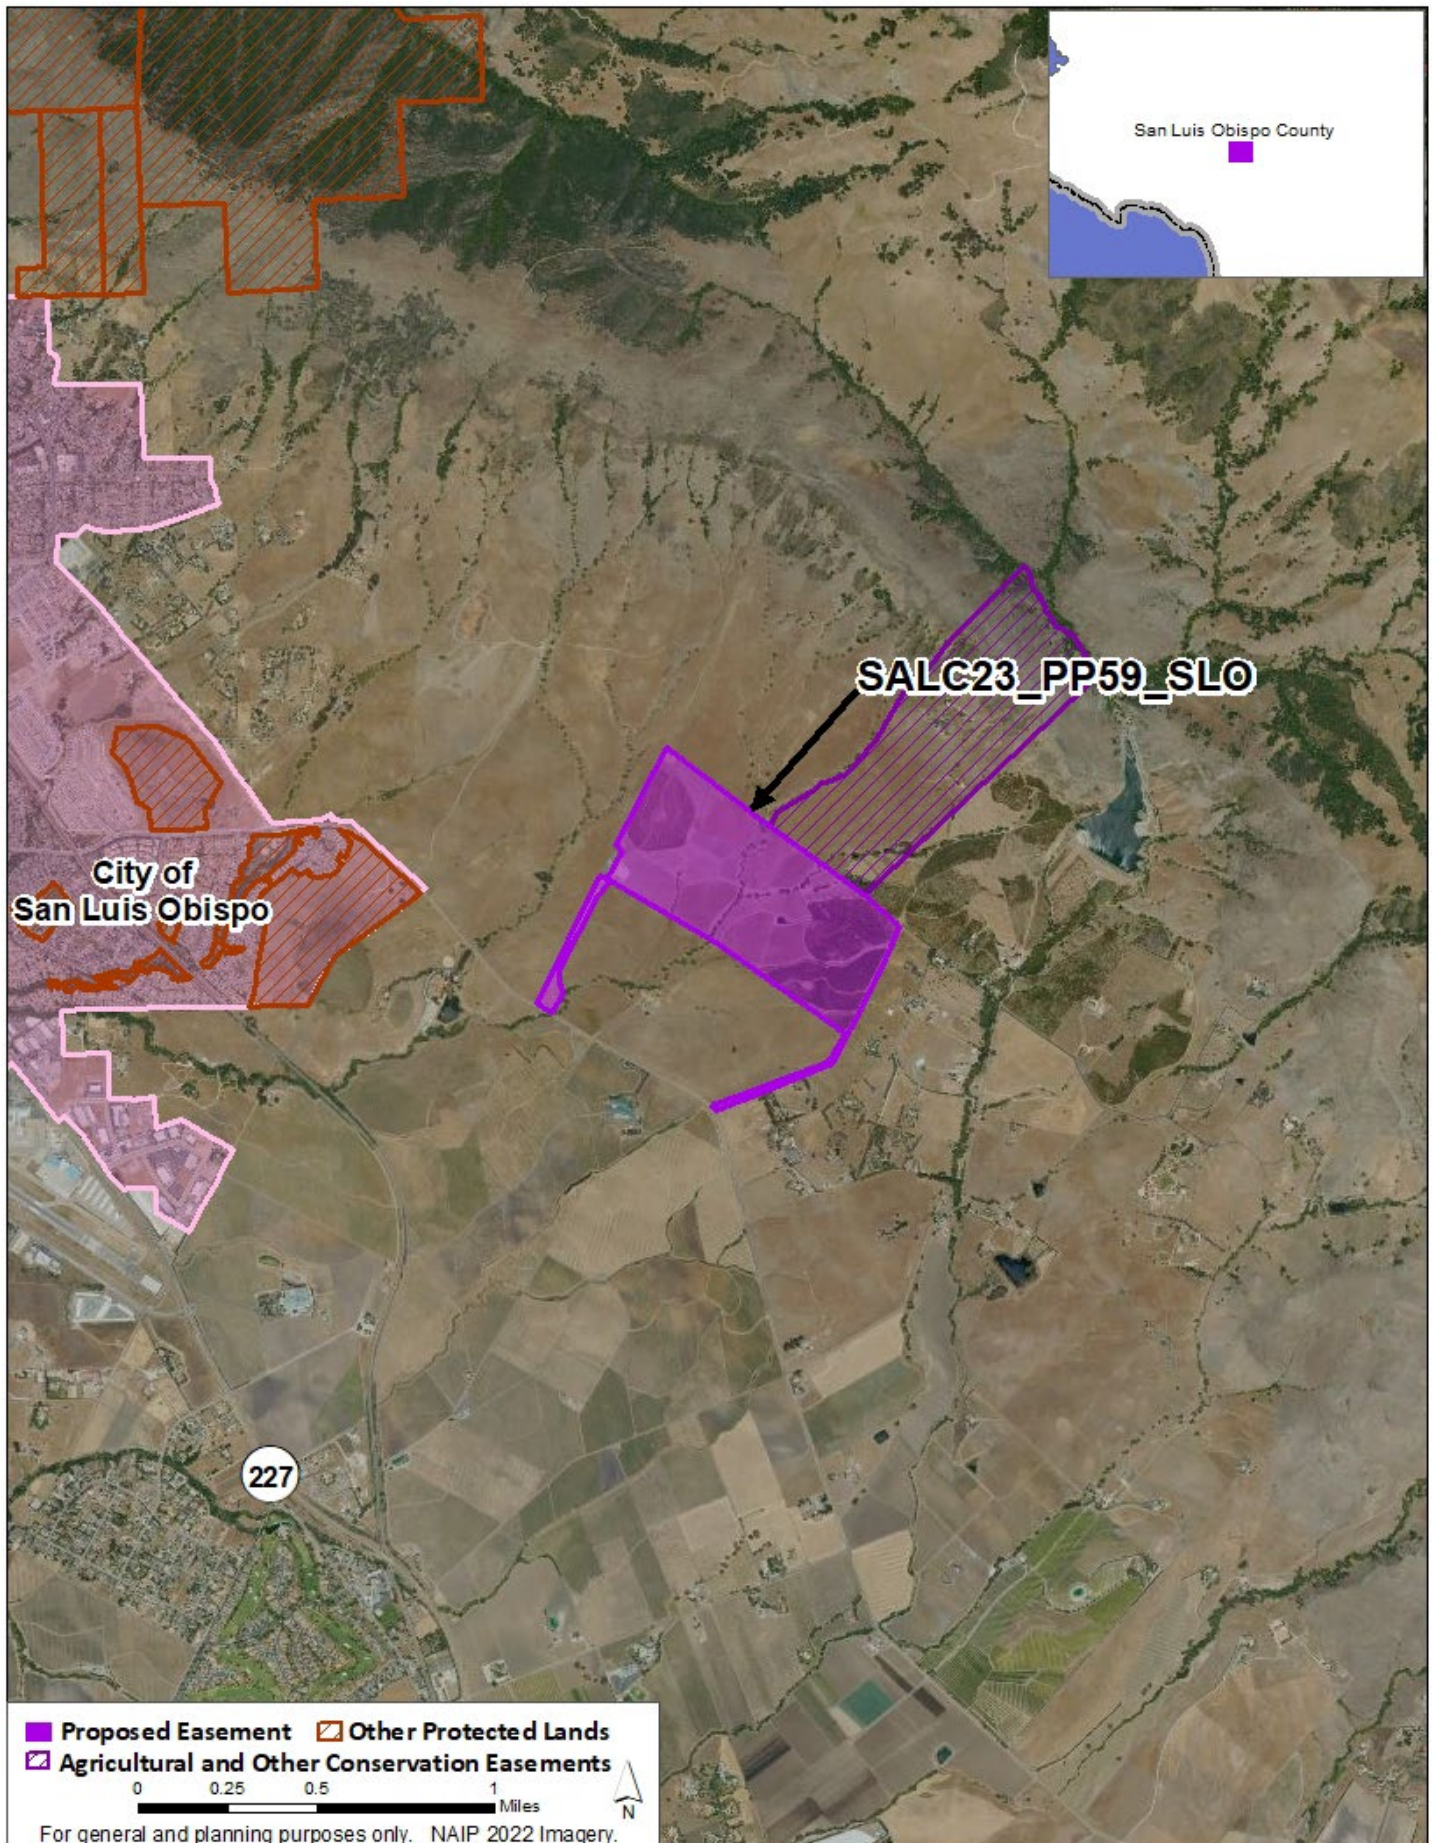

*Source Water Protection:* There are two seasonal streams that  
converge in the middle of the property that ultimately feed  
into San Luis Obispo Creek. The creek provides critical habitat  
for threatened South Central California Coast steelhead.

**Notable Features**

N/A

**Project Description**

This is an easement acquisition project for a ±1,191-acre property in Nevada County. The property is lessee-operated and provides year-round pasture for 3,000 goats and sheep. Products are sold directly to consumers, including through markets in the Bay Area. Livestock is sold at the market in Galt. Onsite wells provide ample water for the grazing operation.

**Strategic Value**

*Climate Resilience*

*Climate Smart Management Practices:* The Property is grazed at a low intensity using rotational and mob grazing techniques to enhance habitat, reduce vegetation, and improve fire safety by reducing fuel loads on the property.

*Co-Benefits*

*Biodiversity:* The property's oak woodlands and grasslands provide habitat for wildlife. The property also contains extensive frontage along the Yuba River and is located within a CDFW priority wildlife movement corridor.

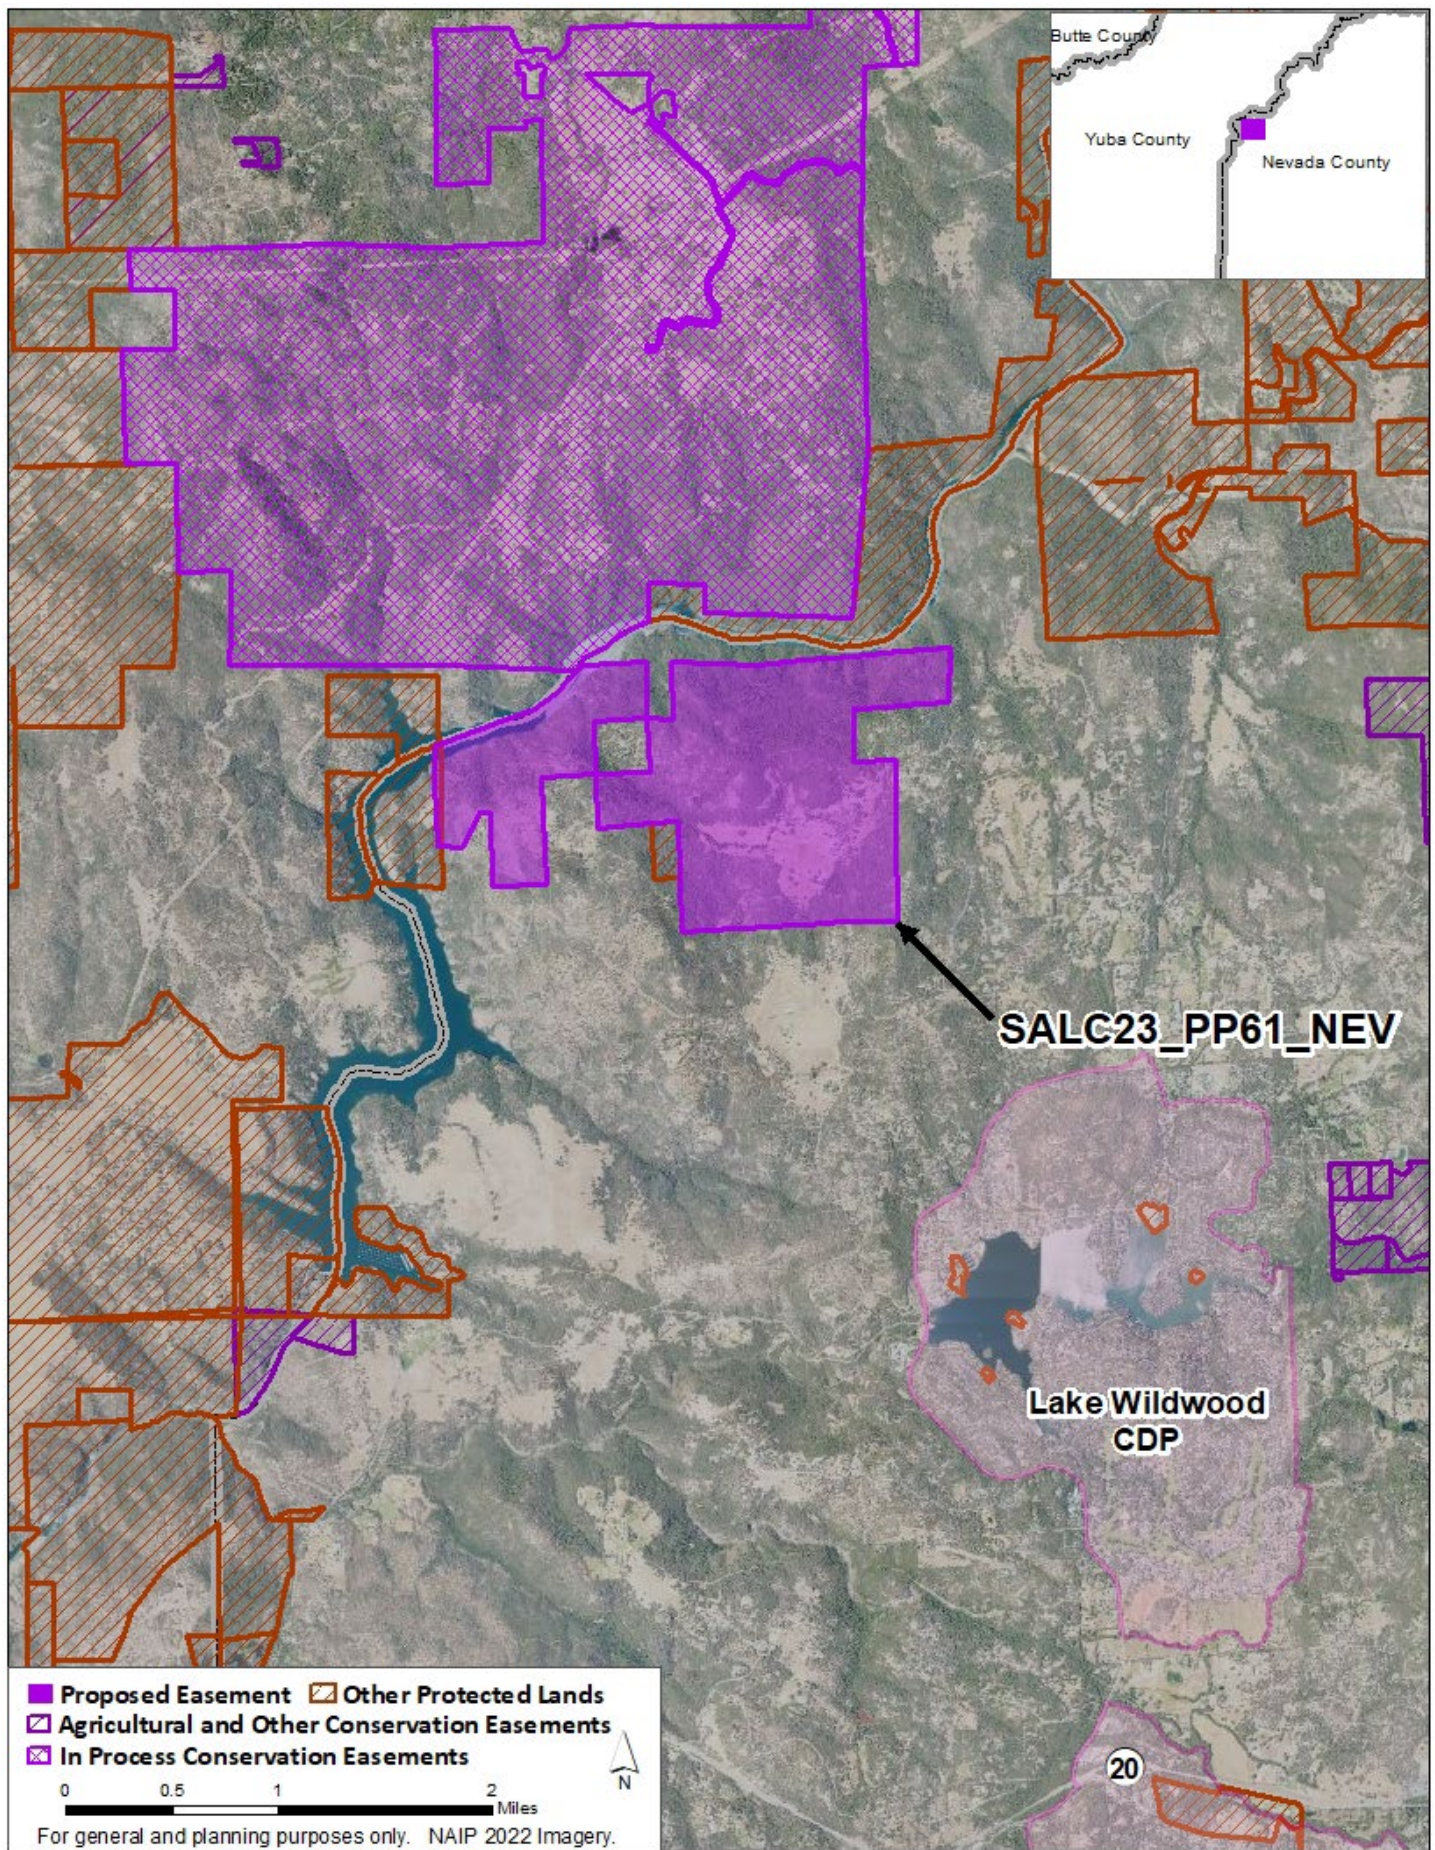

*Proximity to Protected Land:* The property is in proximity to public and protected lands owned by state and federal agencies.

**Notable Features**

The project includes development and implementation of a SALC-funded management plan.

**Other Investment Targets**

None

**Project Description**

This easement acquisition project is for a ± 2,616.48-acre property located in Mariposa County. The property is utilized by two different cattle grazing operations. In total, the property supports approximately 175 cow/calf pairs year-round and an additional 200-300 yearlings seasonally. The cattle are sold at the Turlock Livestock Auction Yard, and through online auctions and direct sales. The operation has ample and reliable water provided from on-site wells, water storage tanks, troughs, stock ponds, and seasonal creeks.

**Strategic Value**

*Climate Resilience*

*Climate Smart Management Practices:* Grazing on the property reduces the risk of catastrophic wildfire by reducing fuel loads on the property.

*Co-Benefits*

*Biodiversity:* The property contains annual grasslands, wetlands, blue oak savannah, oak woodlands and foothill pine, and riparian areas that provide habitat for various species. The property is classified by CDFW as Irreplaceable and Essential Corridors and Conservation Planning Linkages.

*Proximity to Protected Land:* The Property lies within a 20-mile corridor that starts in the lower grasslands and vernal pools of the San Joaquin Valley spanning the Sierra National Forest and Yosemite National Park. The property is adjacent to other protected lands held under easement by Sierra Foothill Conservancy and other conservation organizations, contributing to protection of grazing lands in perpetuity along with a significant wildlife linkage.

*Viewshed:* The project will preserve a viewshed along Highway 140.

*Source Water Protection:* The Property includes valuable water resources, with over 12.5 miles of ephemeral streams including 1.5 miles of Bear Creek, four ponds, and multiple developed and undeveloped springs within the Corbet Creek – Bear Creek (HUC12) watershed, which supplies the Bear Reservoir, a main water supply source for Merced County within the critically over-drafted Merced Groundwater Basin.

**Notable Features**

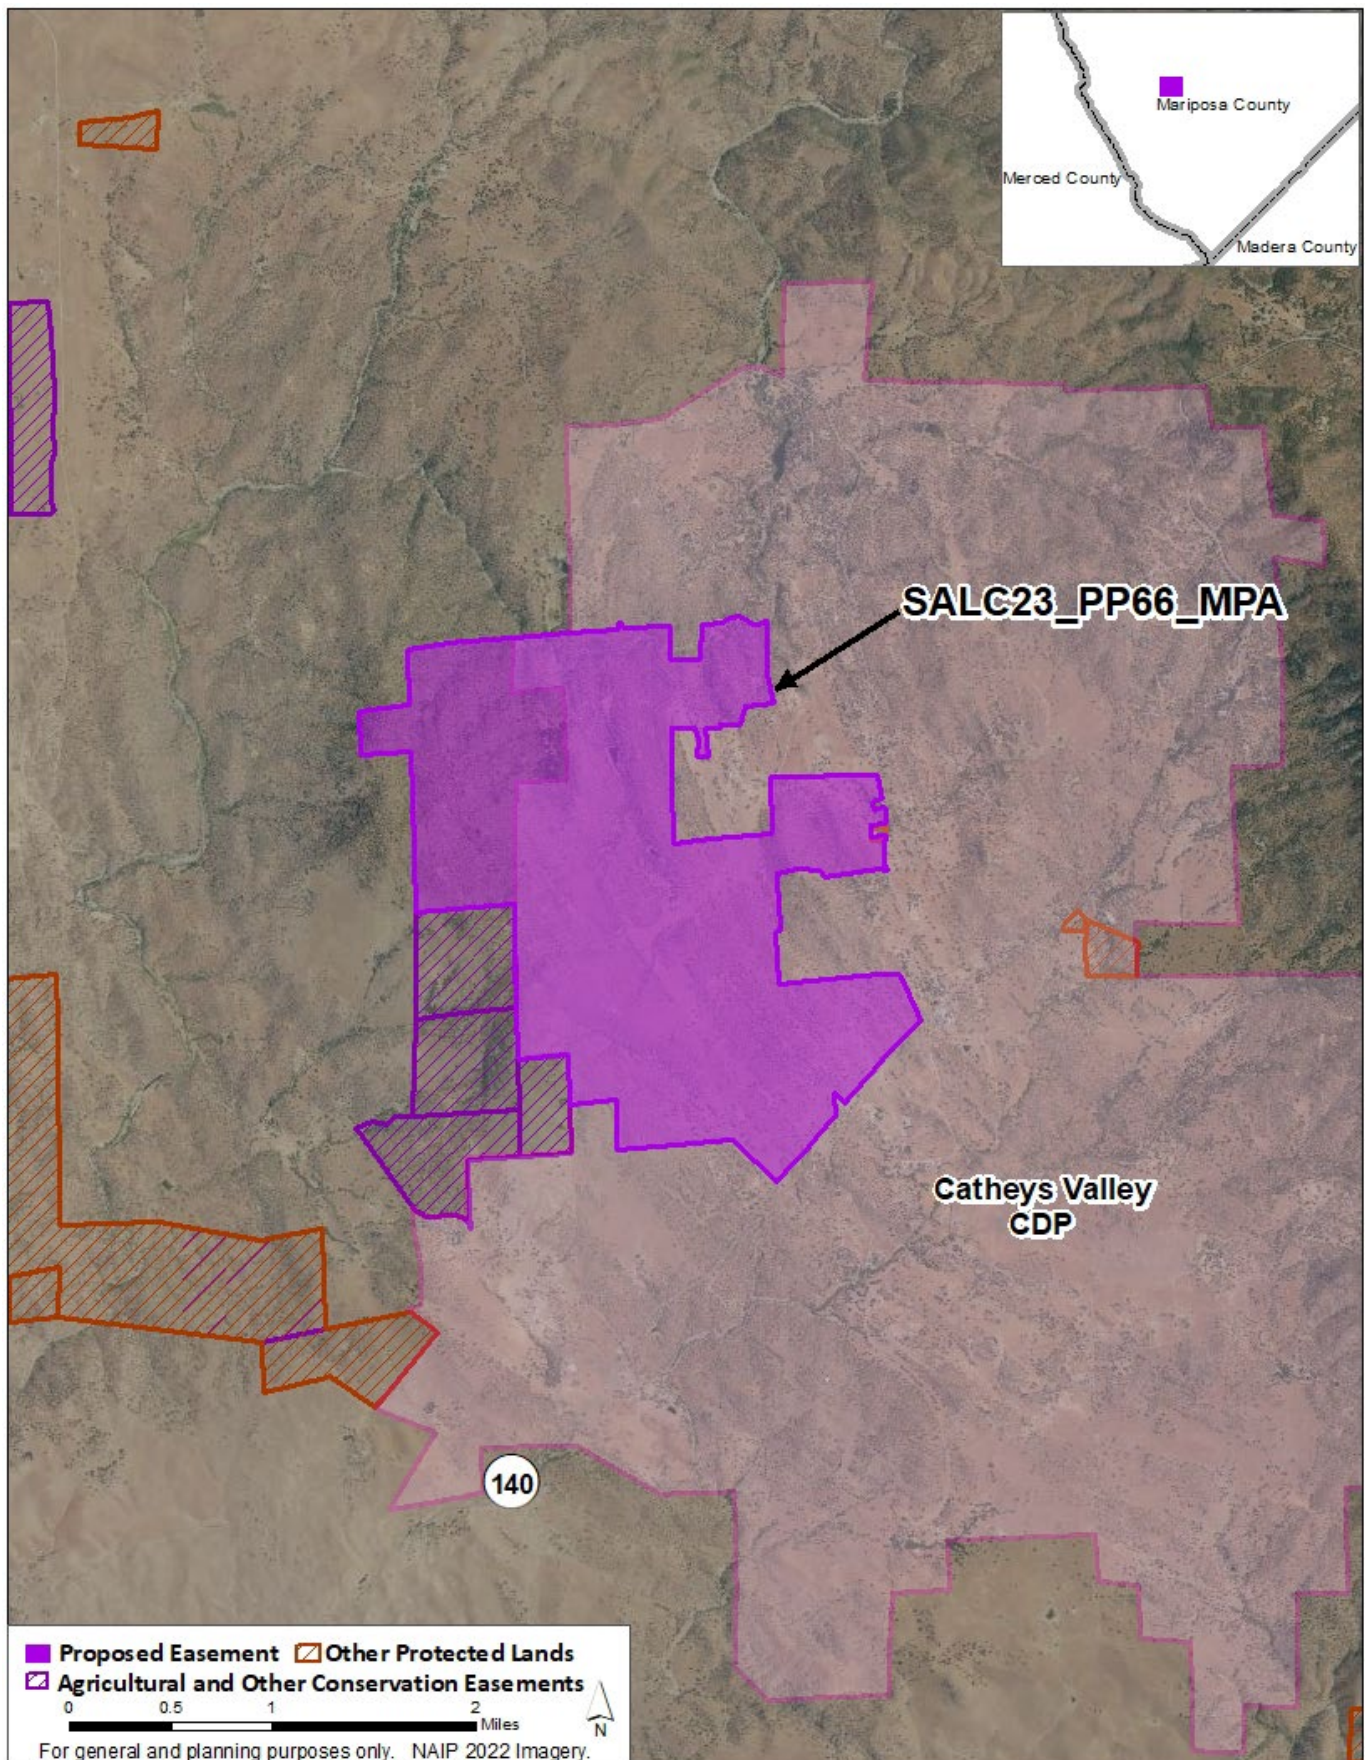

Applicant applied for Priority Populations Benefits.

The conservation easement will restrict agricultural intensification.

The project includes development and implementation of a SALC funded management plan.

**Project Description**

This project is for the purchase of a conservation easement on a ±395-acre property located approximately 0.46 miles from the City of San Juan Bautista. The property produces certified organic crops, such as spinach, lettuce, cilantro, broccoli, cauliflower, celery, mustards, green beans, and cabbages. Nearly the entire property is in active production, with 3 building envelopes reserved for agricultural infrastructure and housing.

**Strategic Value**

*Sustainable Agriculture Use*

*Soil quality:* Conservation of the property will protect over 378 acres of prime soils that are in organic production.

*Co-Benefits*

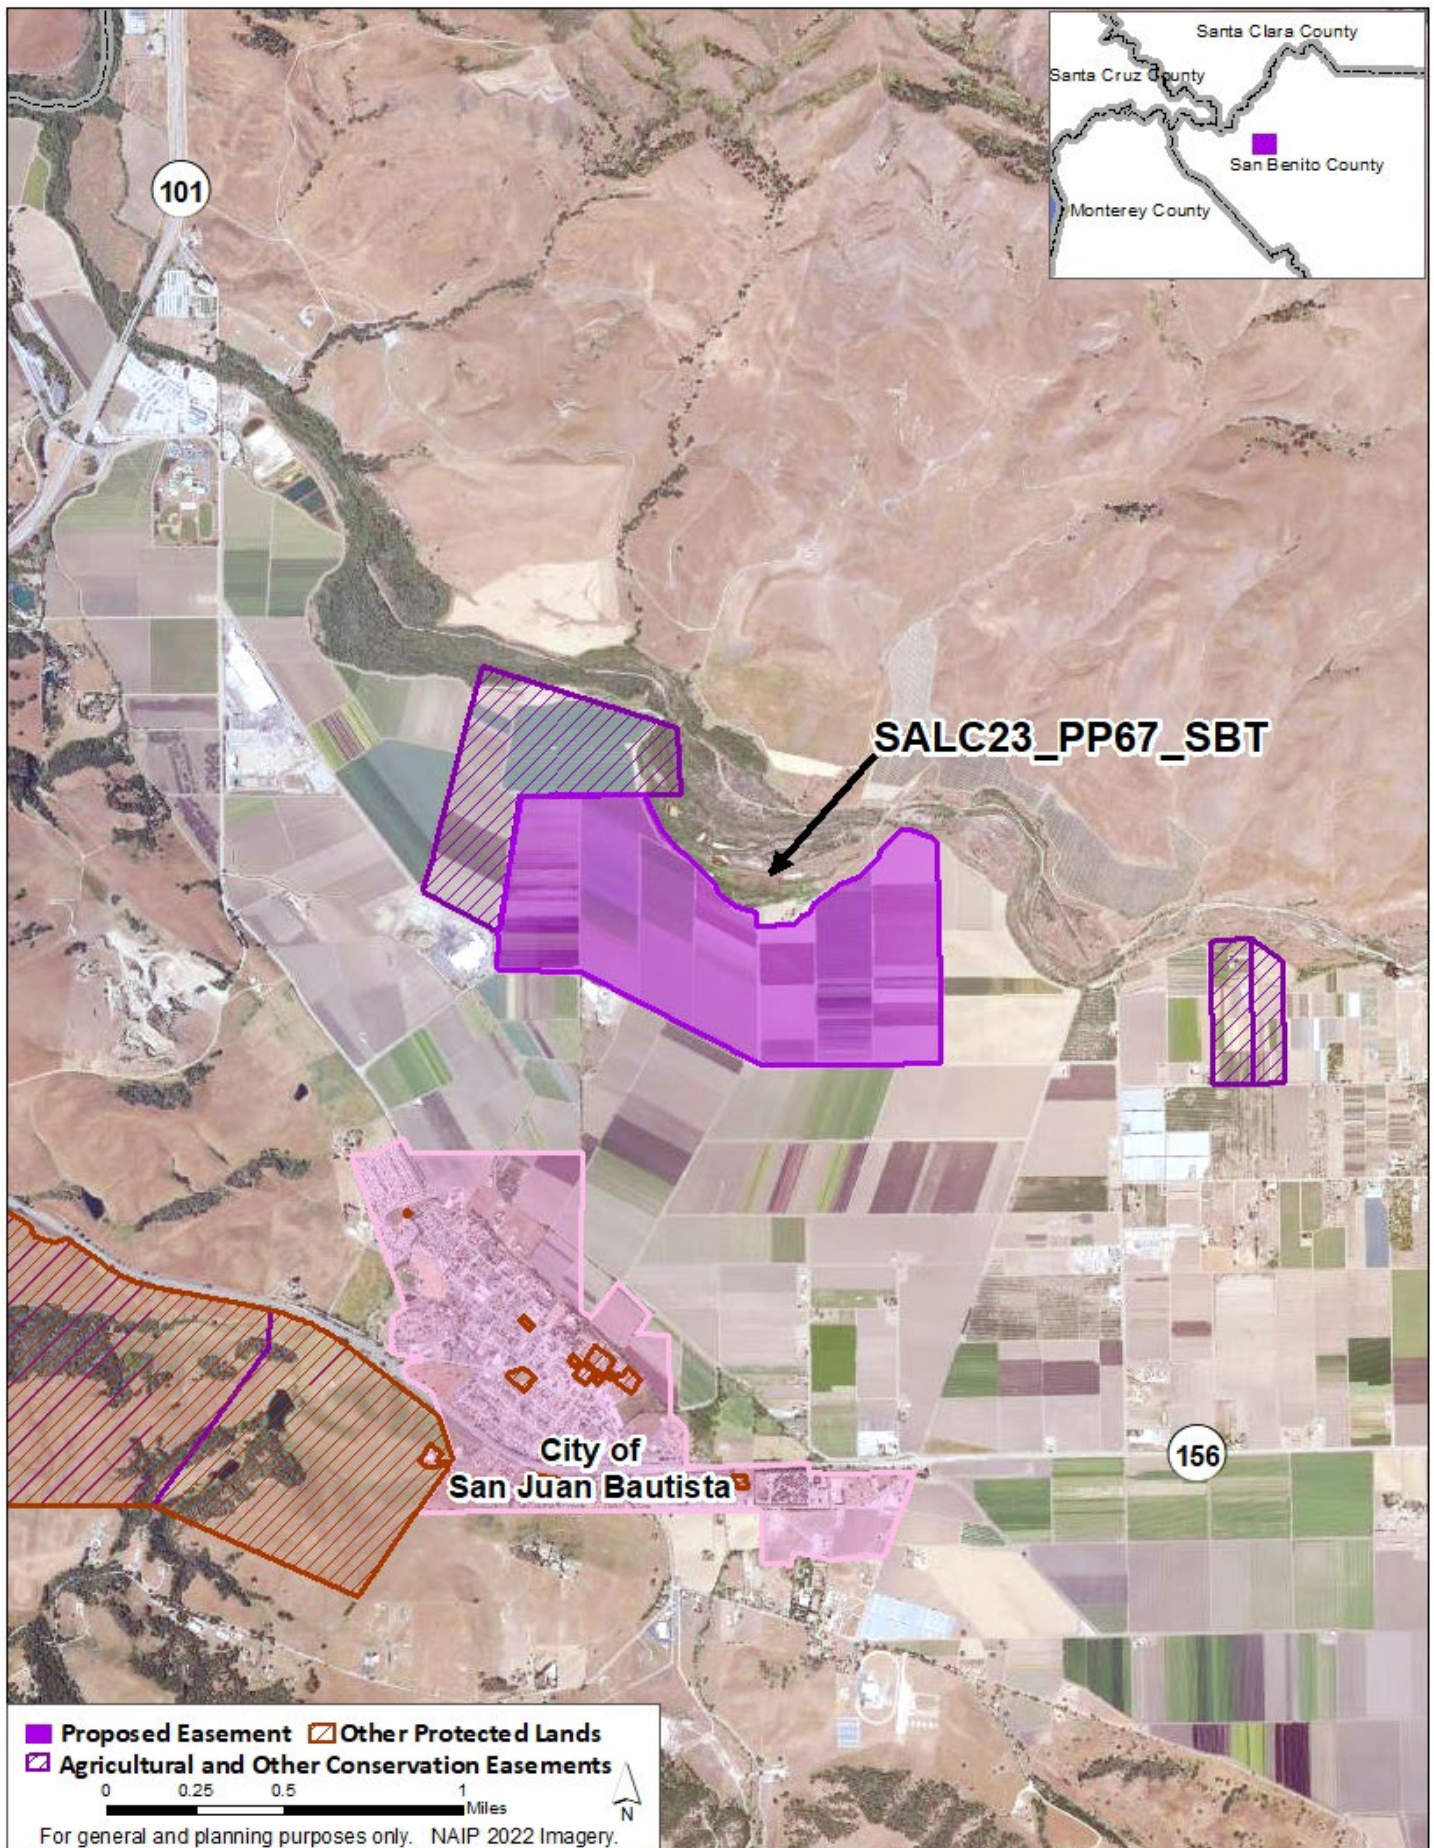

*Source Water Protection:* The project will provide a protected buffer to the San Benito River, which is located to the north of the property.

**Notable Features**

**Project Description**

This easement acquisition project is for a ±155-acre irrigated orchard property located near the City of Modesto in Stanislaus County. The property is distinguished by high-quality soils utilized for growing almonds since 2008. The orchard is flood irrigated with water provided by the Turlock Irrigation District. The property also has an irrigation well. The landowner implements regenerative practices to improve soil structure and retain soil moisture.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is located 3 miles from the City of Modesto's Sphere of Influence and the City of Ceres. Both cities are expanding to meet housing goals.

*Sustainable Agriculture Use*

*Soil quality:* The property has Prime Farmland and Farmland of Statewide Importance that are managed through a range of sustainable practices.

*Water Management Practices:* The orchard is flood irrigated every two weeks to manage water efficiently and sustain the production of almonds.

*Co-Benefits*

*Economic:* The agricultural operation utilizes local agricultural infrastructure and supports local agricultural businesses. The operation employs approximately 20 full-time employees and 100 seasonal laborers from local communities.

*Biodiversity:* The landowner focuses on improving soil health by planting cover crops between the rows and applying compost annually which improves both the soil structure and insect diversity.

**Notable Features**

The project includes development and implementation of a SALC-funded management plan.

Applicant applied for Priority Populations Benefits.

**Other Investment Targets**

Provides secure land tenure  
to a CA tribe

**Project Description**

This fee title project is for a ±560-acre property in Lake County. The tribe will reintroduce traditional practices, such as cultural burns and community gardens featuring native plants. The tribe will also continue grazing the property. Not only will this project provide a reliable, culturally significant food source, but it will also strengthen the community's connection to its traditional practices and the land.

**Strategic Value***Infill and Compact Development*

*Infill/Compact Development:* This project would prevent rural residential development and would support infill in the nearby community of Middletown.

*Climate Resilience*

*Climate Smart Management Practices:* The project will involve the development of a comprehensive agricultural and rangeland management plan in collaboration with tribal elders, agricultural experts, and relevant agencies. This plan will also incorporate TEK practices.

*Equity*

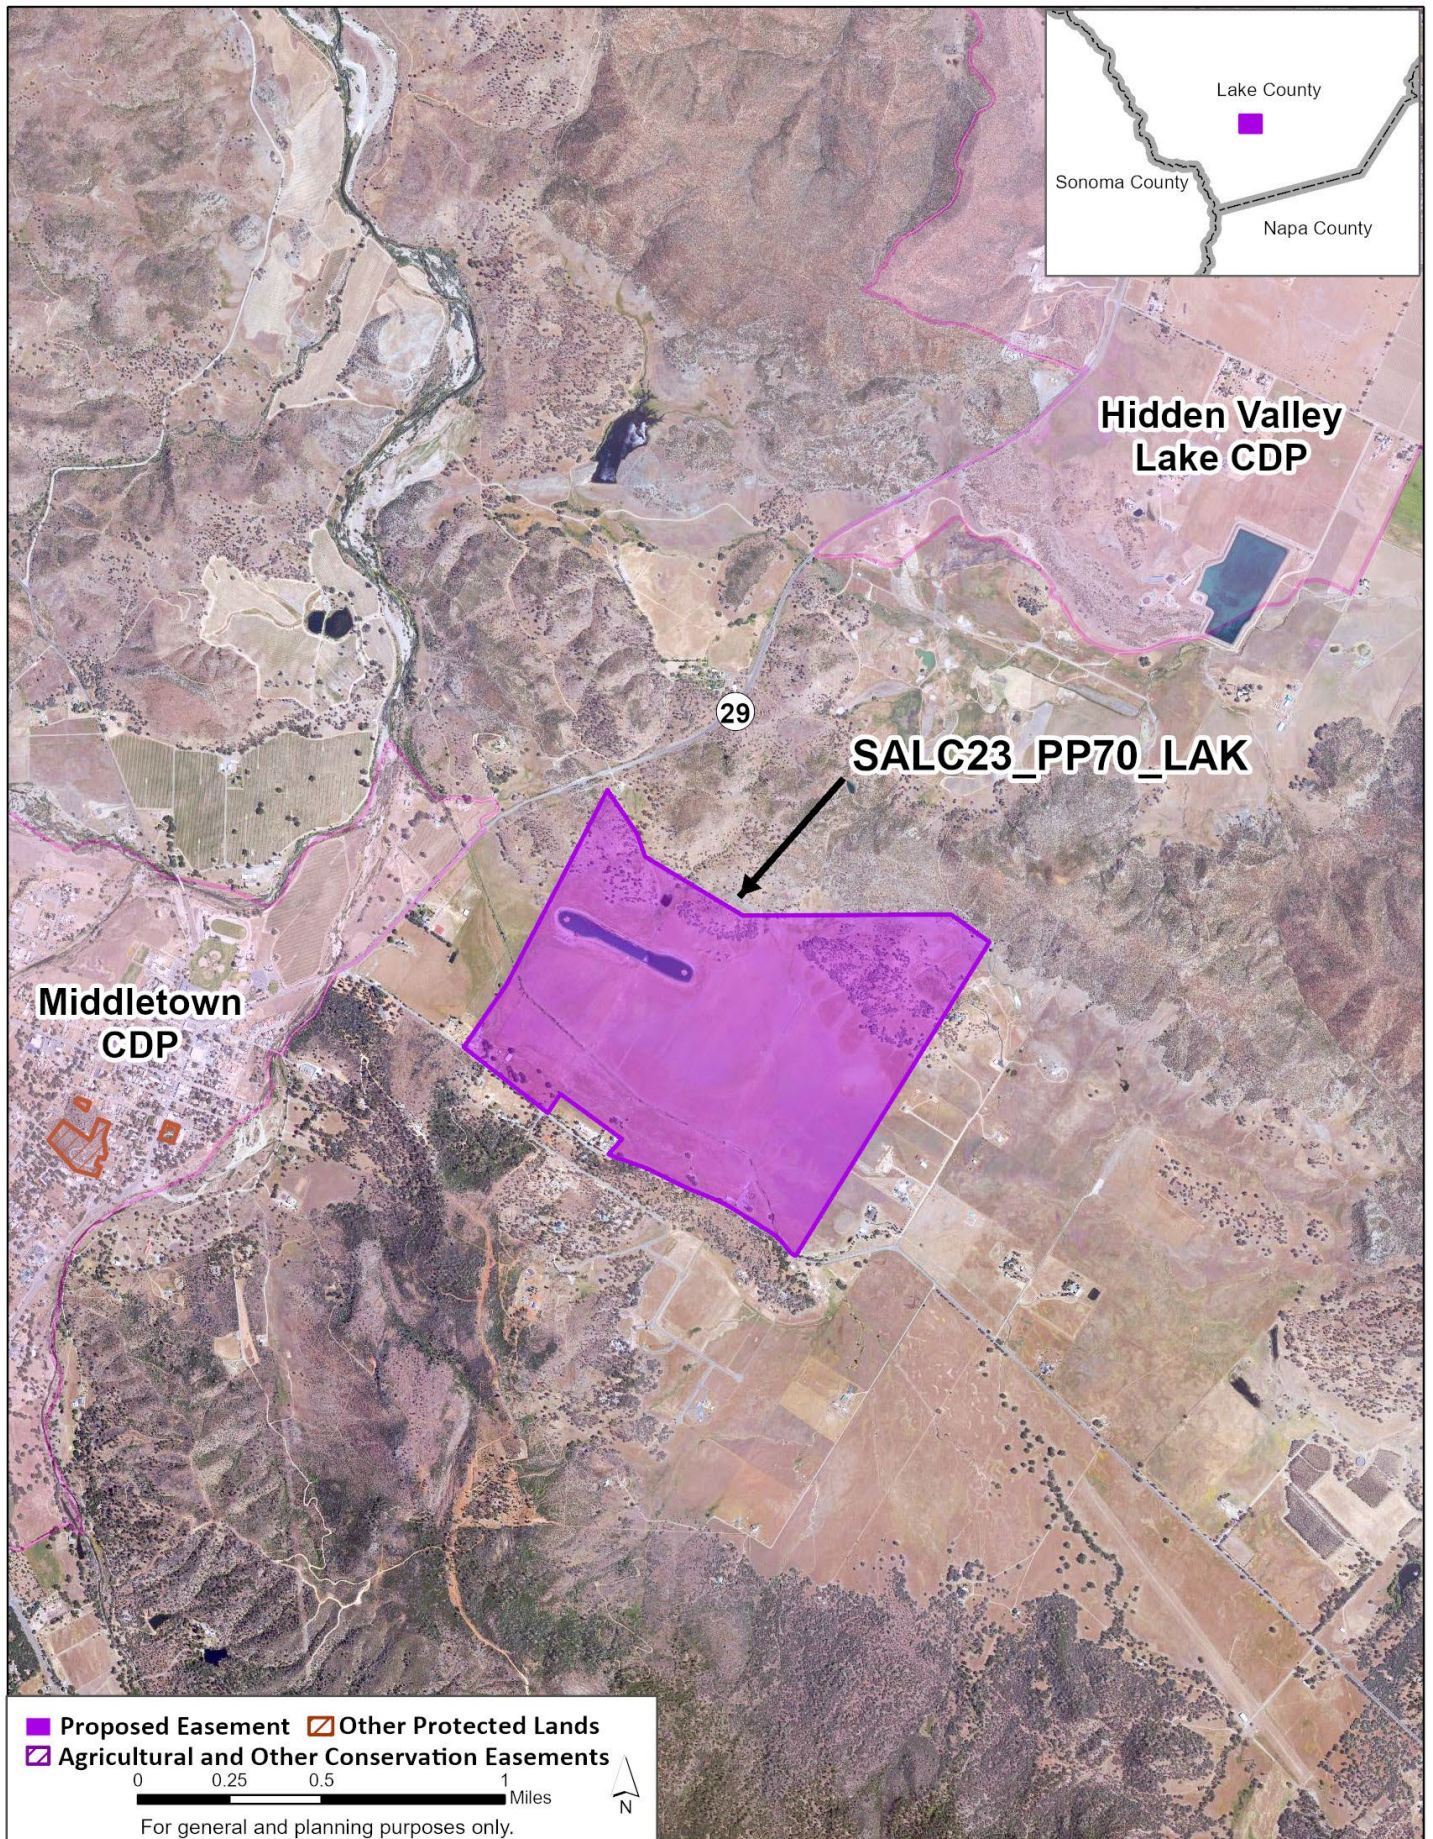

*Tribal Co-Management & Access:* This project is led by a tribal non-profit that secures land access for the tribe.

**Notable Features**

The project includes the development and implementation of a SALC-funded management.

**Project Description**

This conservation easement acquisition description is for 78.91 acres of multi-generational, owner-operated irrigated farmland in the San Joaquin Basin of the mid Central Valley. The Farm is entirely planted with almonds planted between 2014 and 2016

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* located between the growing unincorporated community of Delhi in Merced County and the City of Turlock in Stanislaus County.

*Greenbelt/Community Separator:* Protection of this farm continues to build upon an existing greenbelt of working lands, including an adjacent 59-acre property conserved by the same landowner in 2023. Safeguarding these productive lands from rapid development.

*Sustainable Agriculture Use*

*Soil quality:* 54 acres Prime Farmland, and 24 acres Farmland of Statewide Importance. On farm practices include no-till farming, cover cropping, incorporating orchard pruning and shredding to promote soil organic matter, and natural compost applications.

*Water Management Practices:* Landowner utilizes soil moisture technology for timely and water-efficient irrigation. The landowner has been involved with FloodMAR, a management strategy that utilizes high flood flows to spread water onto agricultural lands in winter; recharging aquifers and groundwater-dependent ecosystems when the orchard is dormant.

*Co-Benefits*

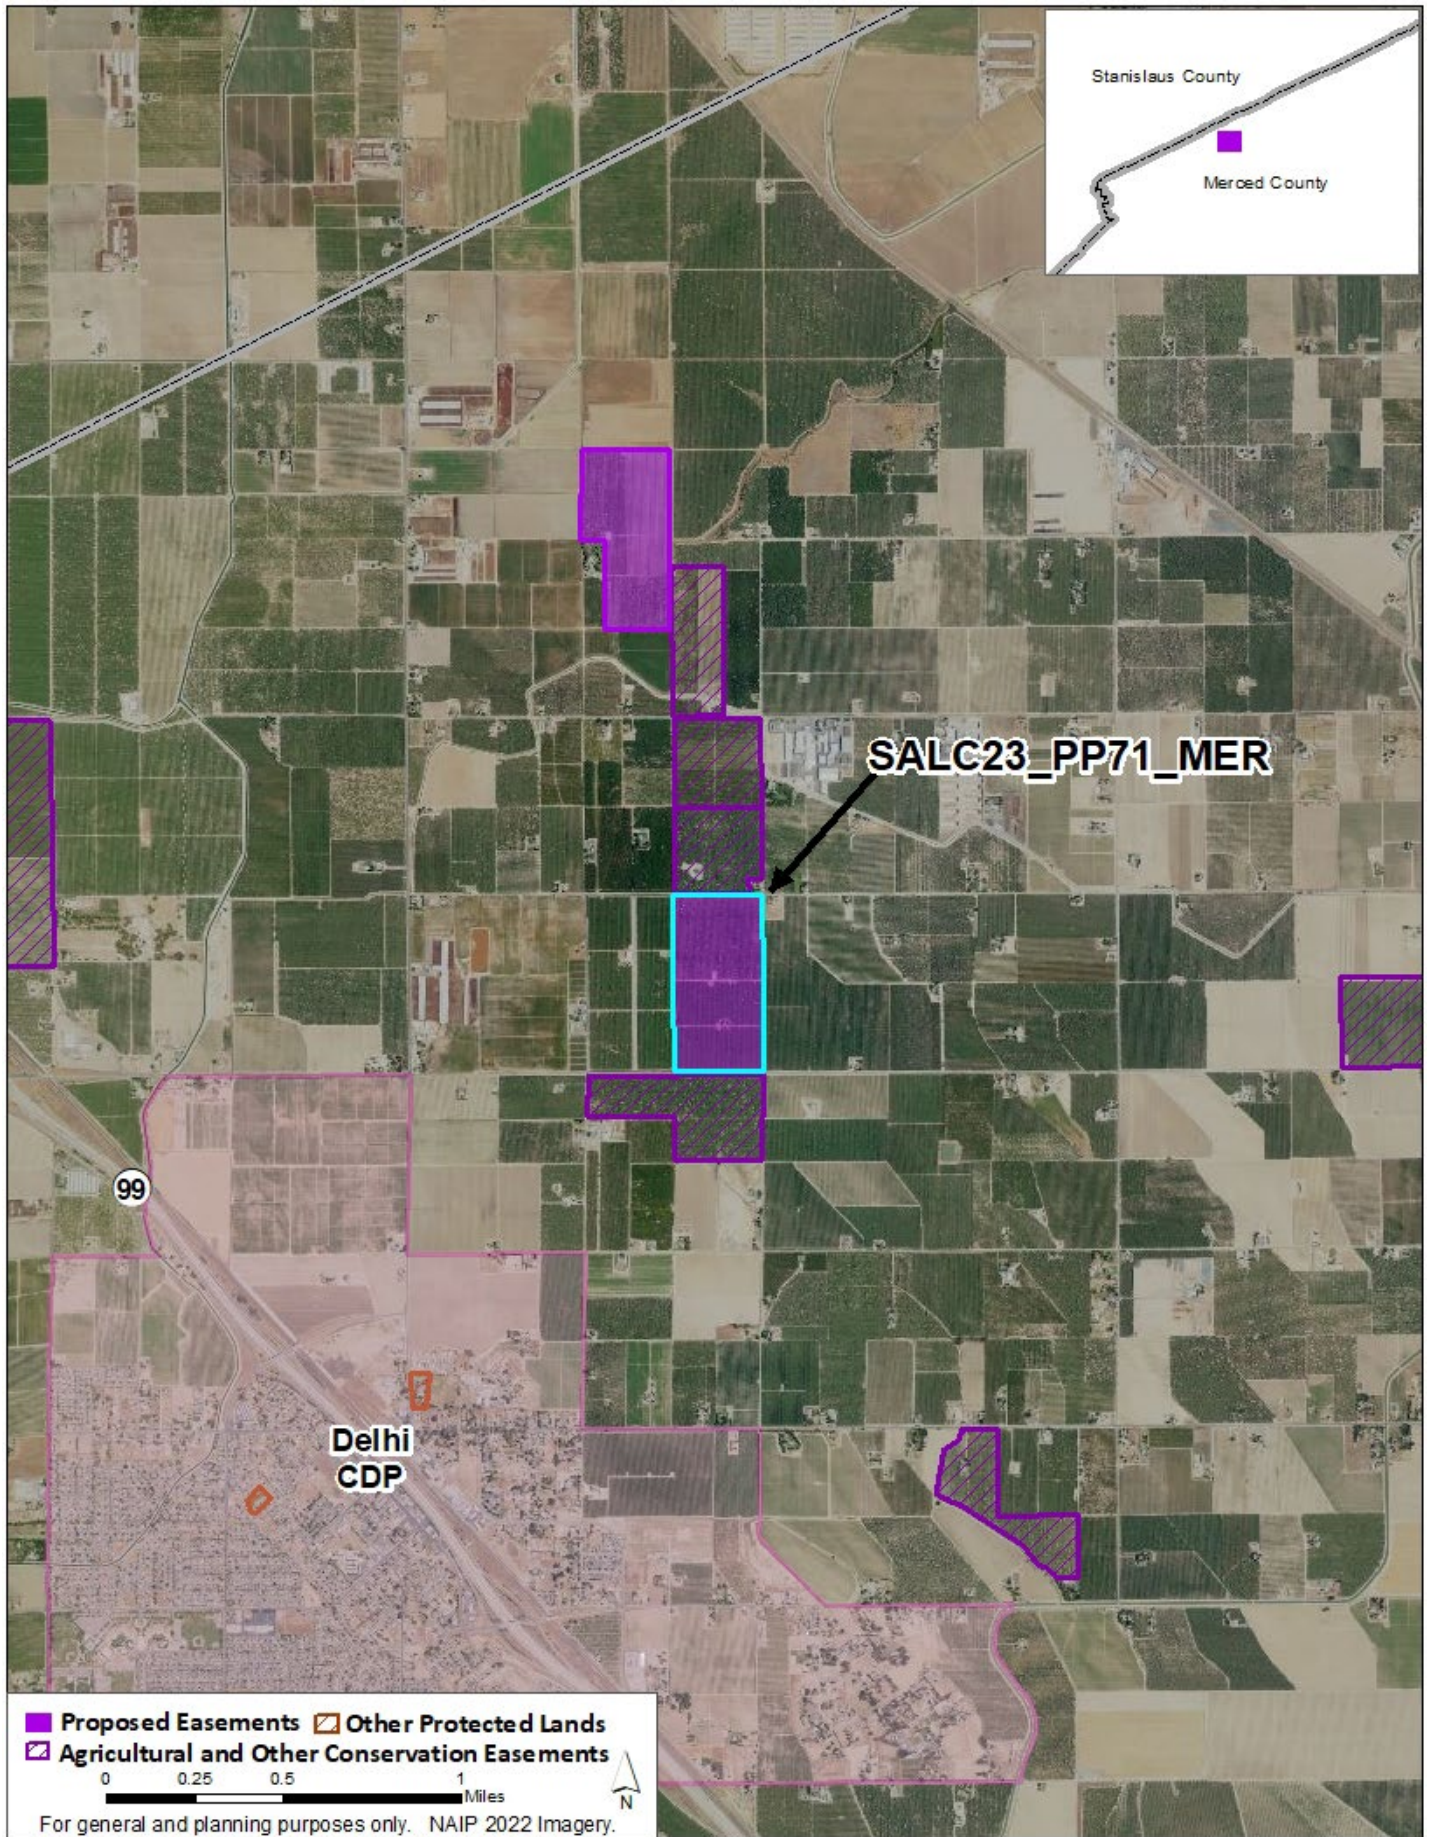

*Economic:* The operation utilizes a local processing facility (Select Harvest in Turlock) and other local businesses for supplies and equipment; and employs local farmworkers sold locally for hulling and processing.

**Project Description**

The project is for the purchase of a conservation easement on a ±74-acre property located near the City of Winters in Solano County. The property is planted to 20-acres of Chandler and 50-acres of Hartley walnut trees. There is an active irrigation well that provides ground water to the property and a second inactive irrigation well that could be repaired if needed. The property is accessible from county roads and has useable farm roads for operations.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The City of Winters is located 1.36 miles from the property. Interstate 505 is within 5 minutes. Conservation of the property would support infill in the nearby job centers.

*Climate Resilience*

*Climate Smart Management Practices:* Cover cropping maximizes water retention and deters pests and weeds.

*Sustainable Agriculture Use*

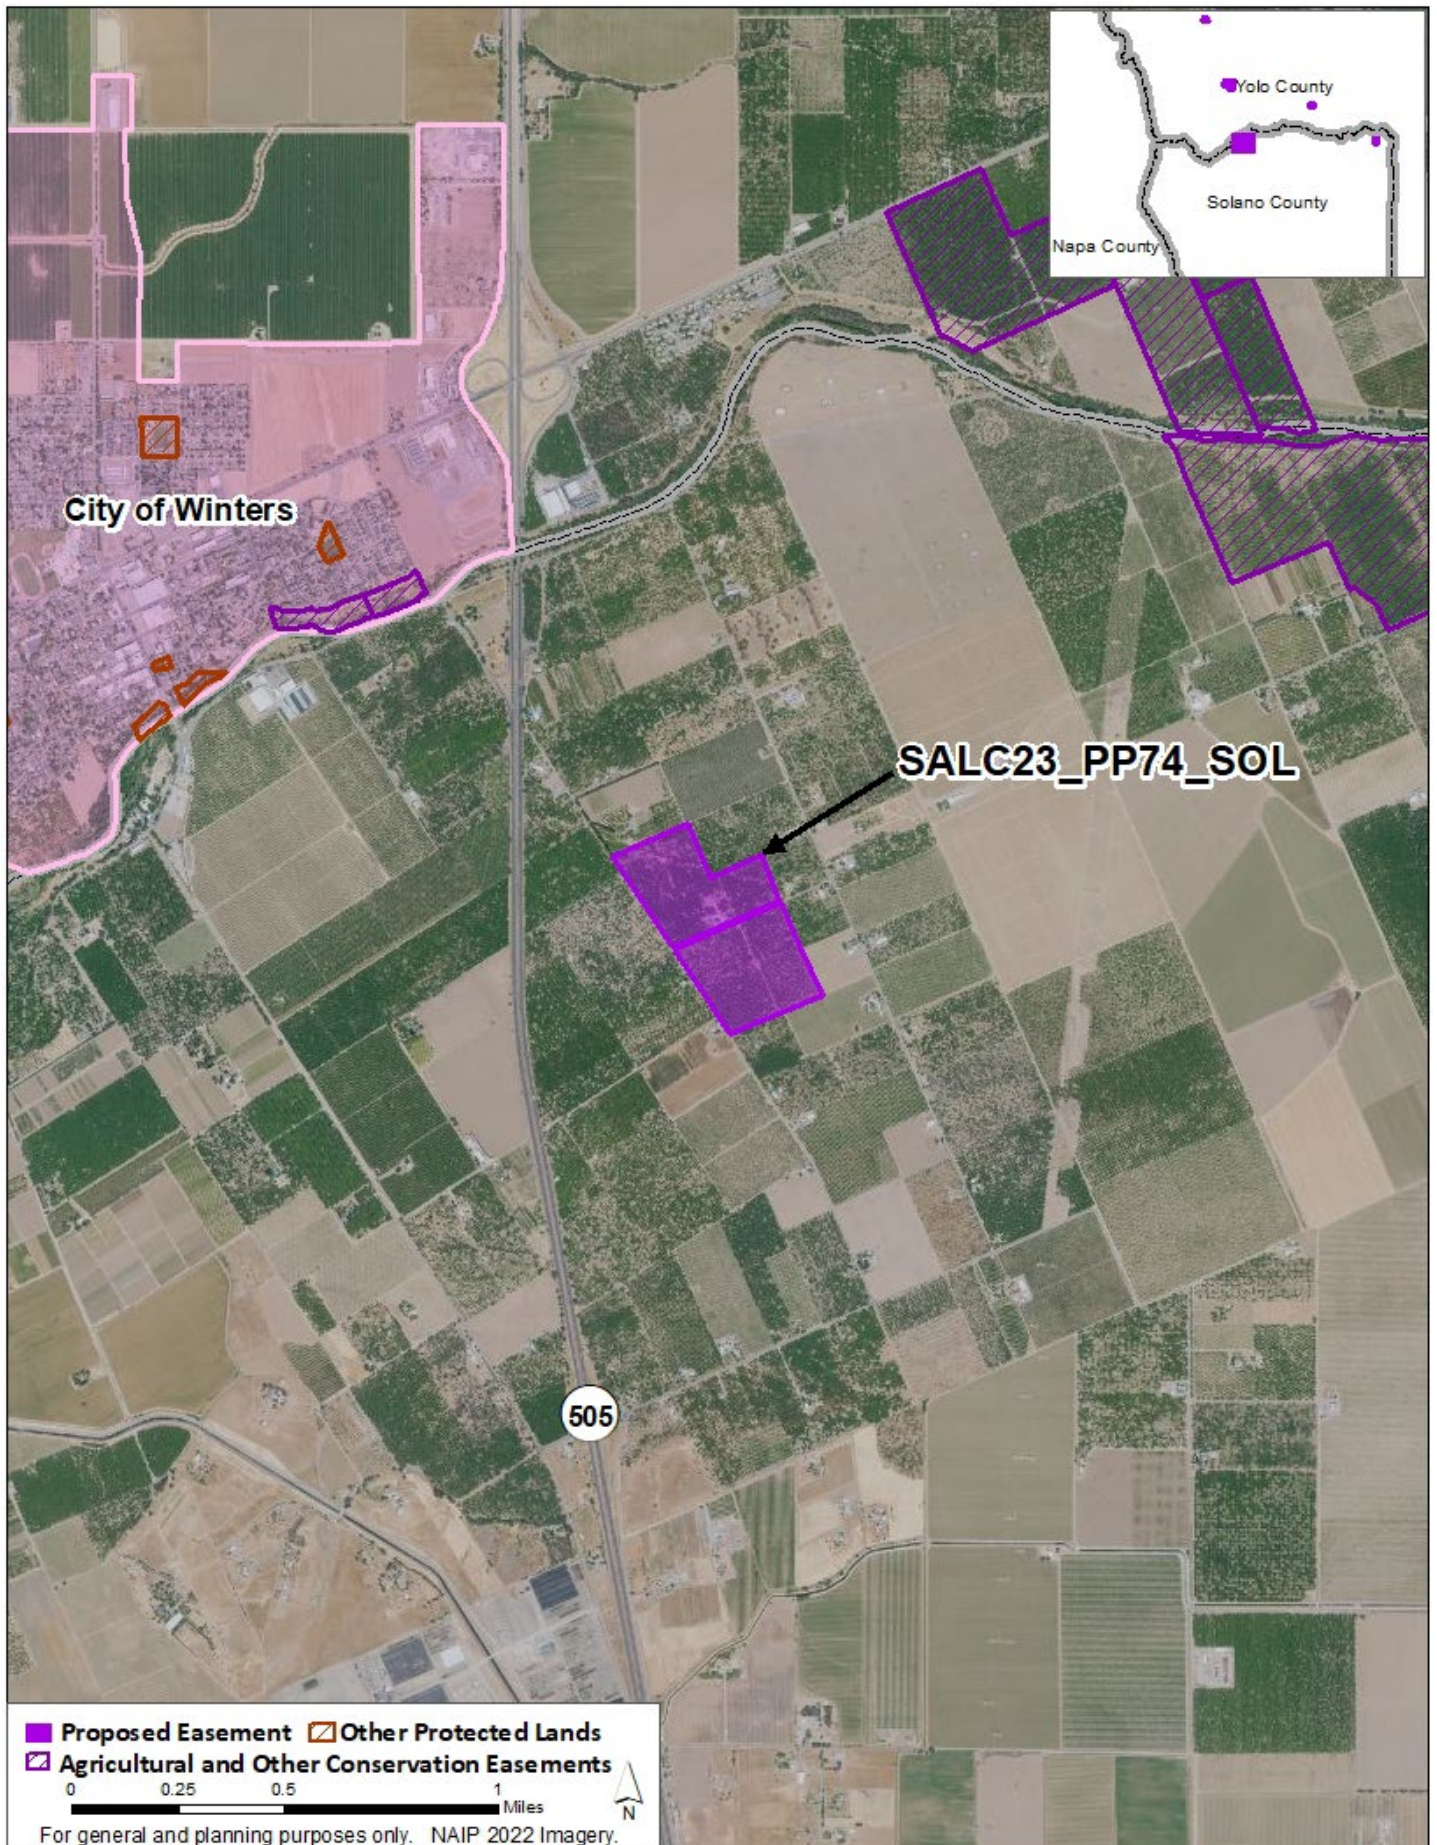

*Water Management Practices:* The property utilizes drip irrigation to reduce water use.

**Notable Features**

**Project Description**

This project is for the acquisition of two conservation easements on ±1,677 acres in Yuba County. The soils are classified as Prime Farmland, Farmland of Statewide Importance, and Unique Farmland. The property is lessee operated and is utilized for the year-round cultivation of various crops, including rice, walnuts, and almonds. Multiple on-site wells, a reservoir, and access to surface water provide adequate irrigation water for agricultural purposes.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property directly borders the City of Wheatland's Sphere of Influence and the Beale Air Force Base.

*Climate Resilience*

*Climate Smart Management Practices:* Soil health and carbon sequestration is enhanced through the incorporation of compost sourced from the county's green waste facility, winter cover cropping, reduced tillage, and the use of alternative inputs such as rice ash and almond hulls, thereby reducing reliance on synthetic fertilizers.

*Co-Benefits*

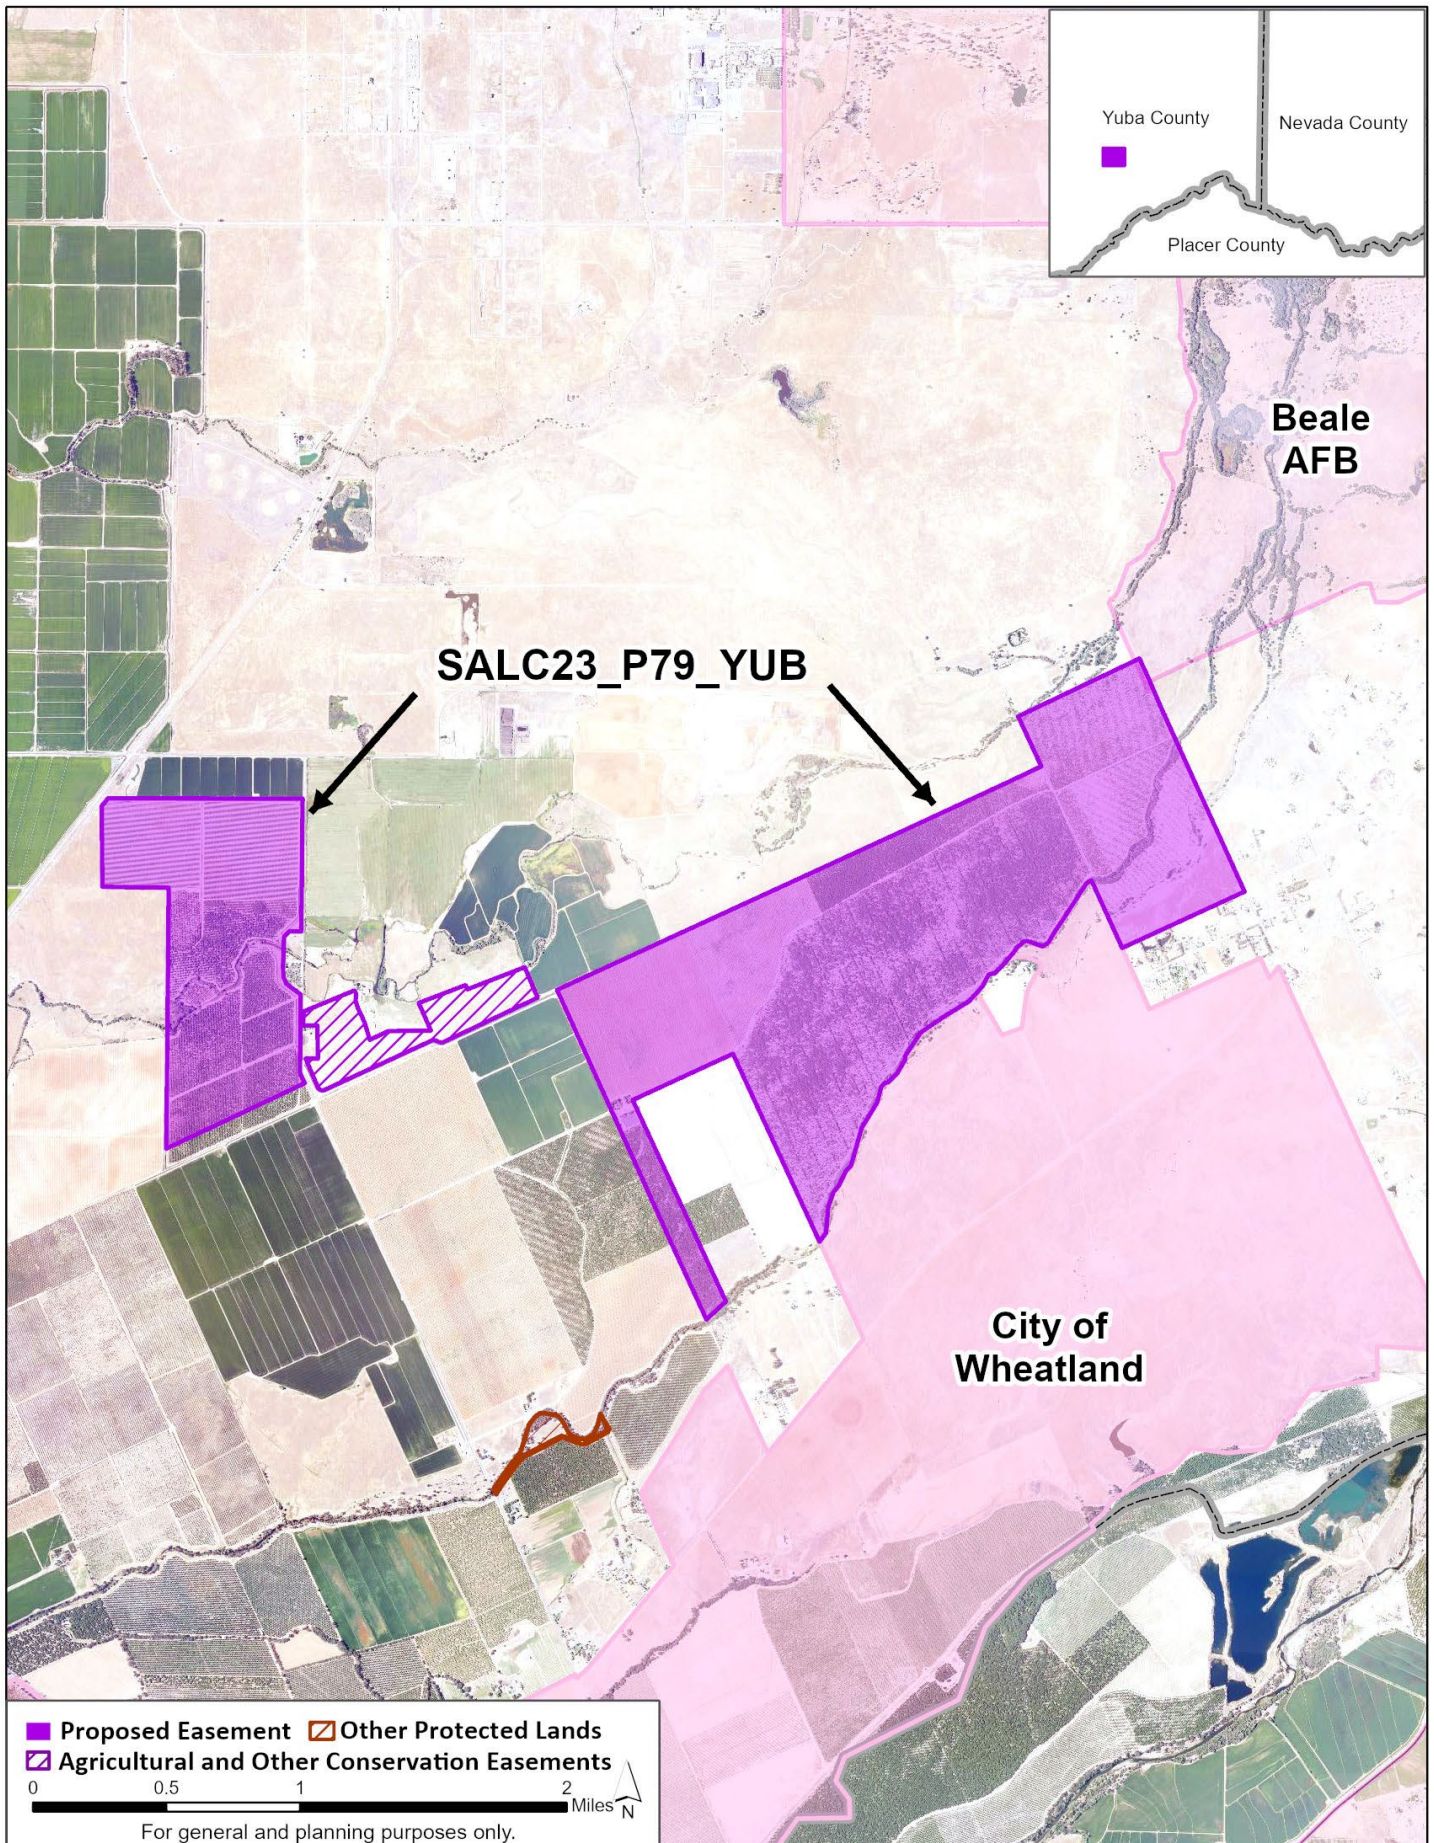

*Biodiversity:* The property has frontage along the Dry Creek and Best Slough, which provide habitat connectivity and a wildlife corridor.

**Notable Features**

Staff recommends funding the \$105,000 requested for associated costs to compensate for the work to complete two conservation easements for the property. Program guidelines permit applicants to request more than \$60,000 if the costs "are commensurate with the work needed to complete the project."

Provides secure land tenure  
to a farmer/rancher who is a  
member of a CA tribe

**Project Description**

This easement acquisition project is for a ±137-acre property located in Tehama County. The property is utilized for cattle grazing and is part of a larger local cattle operation. The property provides pasture from June to December and supports 40 cow/calf pairs, 50 yearling heifers, and steers of purebred Bonsmara cattle for summer breeding. The grazing operation is supported by ample and reliable water provided from on-site wells and surface water delivery.

**Strategic Value***Climate Resilience*

*Climate Smart Management Practices:* Property engages in regenerative grazing, invasive species control, and restoration of native plant communities. Grazing occurs at optimal intervals to prevent overgrazing. Grazing charts are used to plan pasture management and to facilitate an adaptive rotational grazing system.

*Co-Benefits*

*Biodiversity:* Native plants and trees planted to support priority bird species and pollinators.

*Proximity to Protected Land:* The property is in proximity to the Sacramento River National Wildlife Refuge and The Nature Conservancy's Dye Creek Preserve.

**Notable Features**

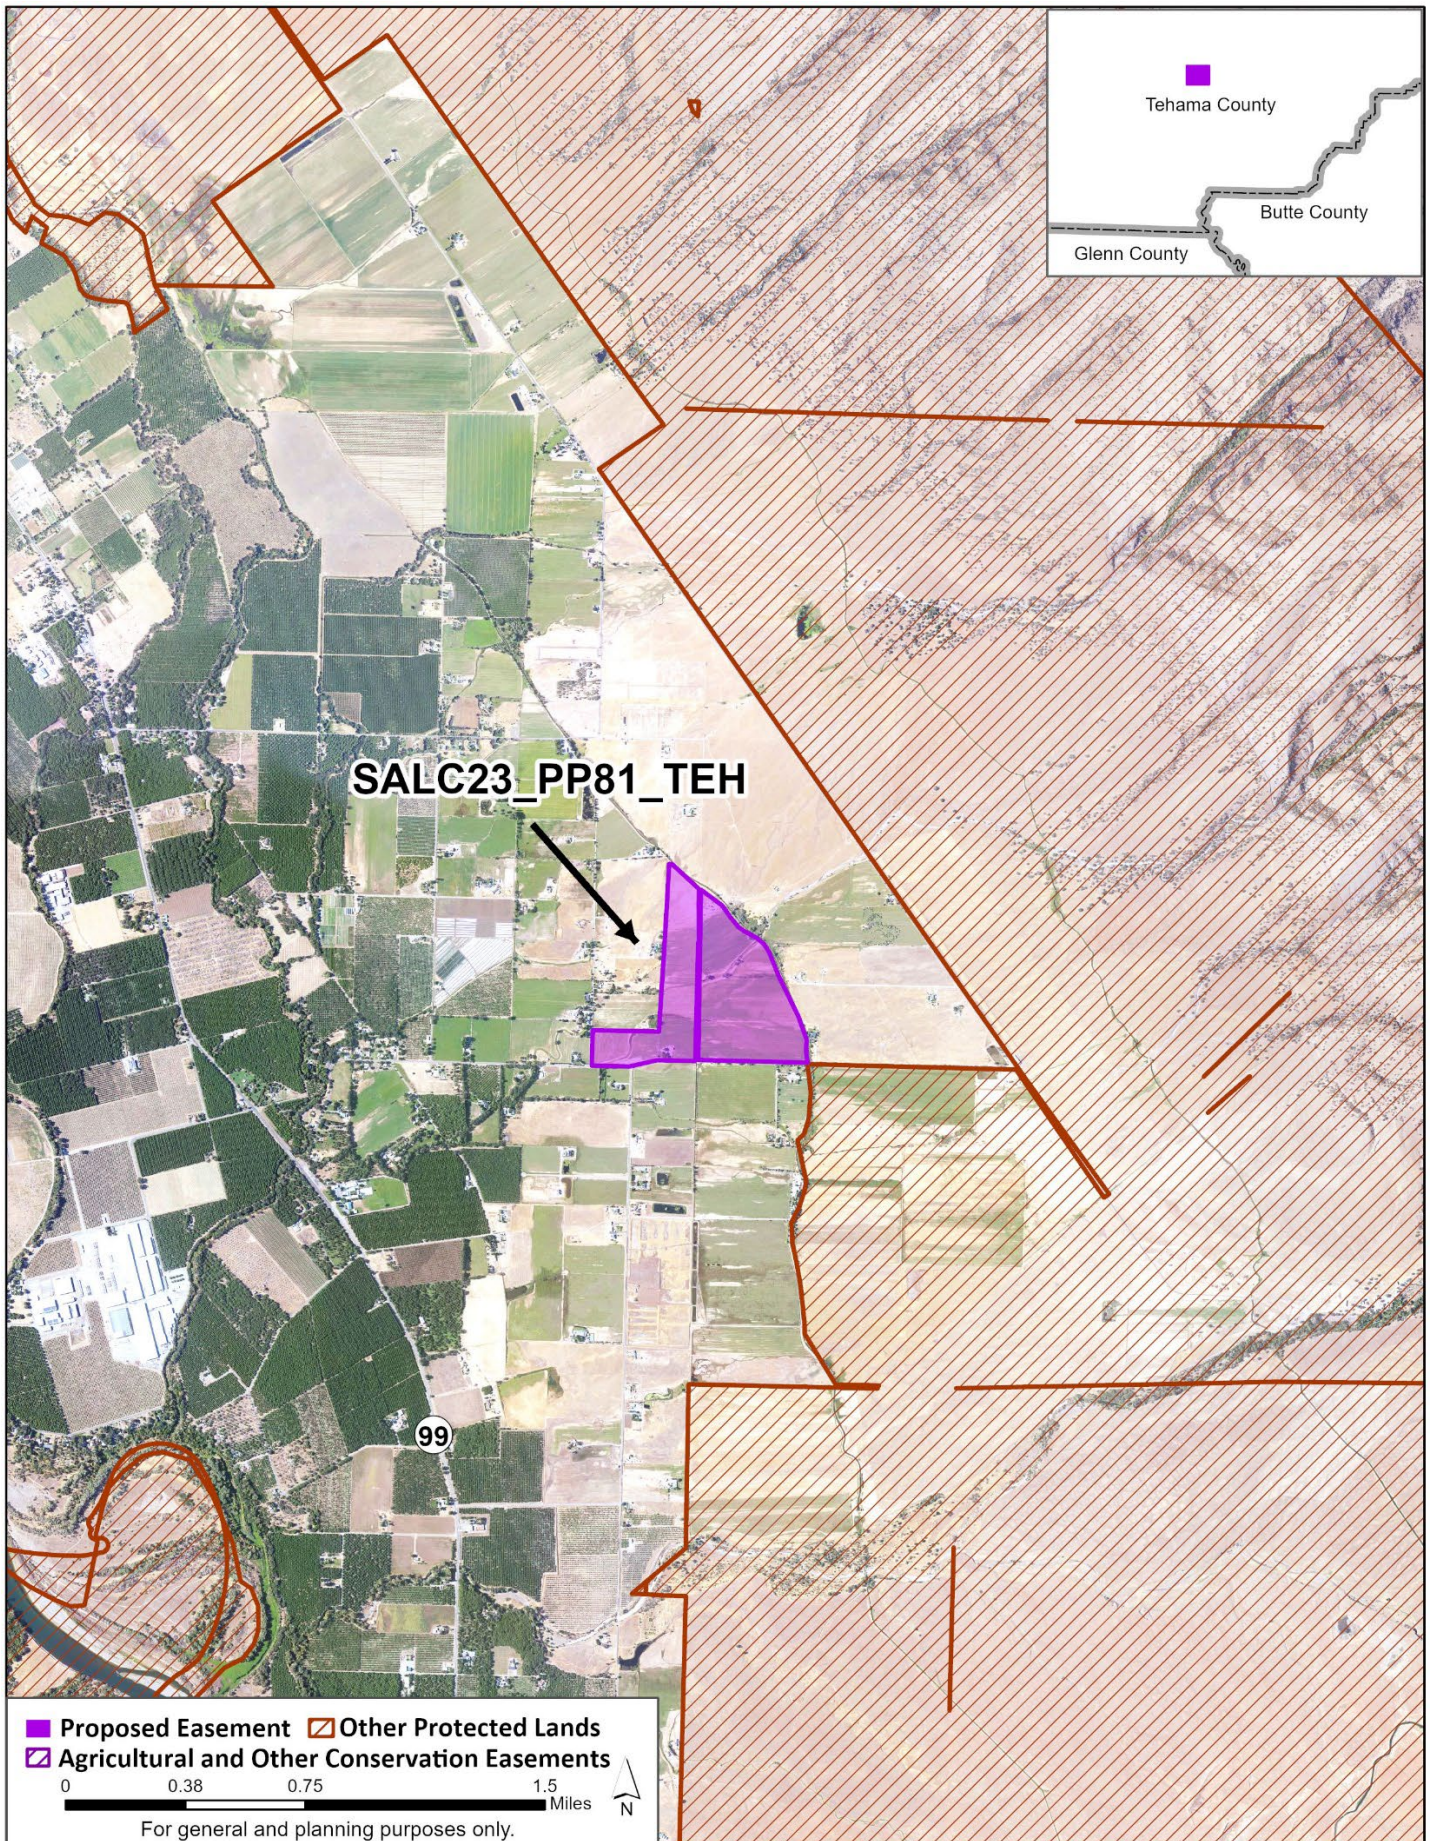

Applicant applied for, and does not meet criteria to qualify for, Priority Population Benefits.

The conservation easement will limit agricultural cultivation to a designated agricultural area.

The project includes development and implementation of a SALC-funded management.

**Project Description**

This project is for an easement acquisition on a ±176.7-acre property in the Salinas Valley of Monterey County. The soils are classified as Prime Farmland. Pura Ranch is landowner-operated, and the entire property is cultivated year round for a variety of row crop vegetables including lettuce, cauliflower, and broccoli. The property has four residences serving as on-site farmworker housing, and various agricultural structures.

**Strategic Value***Infill and Compact Development*

*Infill/Compact Development:* The community of Gonzalez is one of several along Route 101, south and east of the City of Salinas, which has grown rapidly in the last 20 years. Protecting this property will limit sprawl along this corridor while protecting critical prime farmlands and buffering the Salinas River.

*Greenbelt/Community Separator:* Pura Ranch is part of a greenbelt of protected prime farmlands north and west of Gonzalez that prevents sprawl along Highway 101.

*Sustainable Agriculture Use*

*Soil quality:* The entire property overlays Prime agricultural soils.

*Water Management Practices:* The Ranch employs efficient water management systems, like onsite sprinkler irrigation, to conserve precious groundwater resources.

*Co-Benefits*

*Economic:* Located in the highly productive Salinas Valley, known as the Salad Bowl of the World, the farm operation contributes to economic and food security. The property contains a solar array system that regularly provides more than 50% of power to the property.

*Proximity to Protected Land:* ALT holds several strategically located agricultural conservation easements proximate to the Pura Ranch.

**Project Description**

This fee title acquisition of ± 420 acres in Yuba County will permanently return ancestral lands to the Nevada City Rancheria Nisenan Tribe. The tribe will implement sustainable land management practices that integrate Indigenous Traditional Ecological Knowledge (ITEK) with contemporary conservation methods both through their established Tribally-led Fire and Forestry Crew, and the continuation of an in-place cattle grazing agreement. The agricultural operation includes existing infrastructure such as perimeter and interior fencing, corrals, and access to water sources.

**Strategic Value***Infill and Compact Development*

*Infill/Compact Development:* Protection of the property will support infill and compact development based on historic development patterns surrounding Yuba City and urbanizing suburbs to the east of these lands.

*Equity*

The acquisition significantly advances equity by supporting California Native American Tribal ownership of ancestral lands and Indigenous cultural resources.

*Tribal Co-Management & Access:* The lands will be owned, managed and used by, and for the benefit of, the Nevada City Rancheria Nisenan Tribe.

*Climate Resilience*

*Climate Smart Management Practices:* Reduction of fire risk by preserving critical watershed functions along Dempsey Creek and supporting natural fire management through traditional burning practices.

*Co-Benefits*

*Biodiversity:* The project protects essential wildlife habitat connectivity between the 420-acre Ranch and the adjacent 12,000-acre Spenceville Wildlife Area, maintaining movement corridors within the blue oak woodland ecosystem while preventing habitat fragmentation.

*Proximity to Protected Land:* The lands are adjacent to the 12,000-acre Spenceville Wildlife Area.

*Source Water Protection:*

**Notable Features**

The project includes development and implementation of a SALC funded management plan integrating cultural resource protection with sustainable land stewardship practices, including culturally informed land management to promote traditional foods, medicines, and materials cultivation.

**Project Description**

This proposed fee title acquisition is for a ± 34-acre property located in Humboldt County. The property contains a mature redwood forest and culturally significant resources, such as native plants for the cultivation of traditional foods, herbal medicine, and fibers for basketry. The acquisition will support implementation of indigenous land management practices, preservation of cultural heritage, utilization of traditional knowledge to steward the land, and sustainable timber management.

**Strategic Value***Climate Resilience*

*Carbon Neutrality:* The project will allow the continued carbon sequestration via the mature redwood forest.

*Climate Smart Management Practices:* The property would be incorporated into the Tribe's existing Forest Management Plan.

*Equity*

*Tribal Co-Management & Access:* The project is led by a Tribe and will support secure land tenure for a California Native American tribe.

*Co-Benefits*

*Biodiversity:* The property contains mature redwood forest that provides habitat for numerous bird and amphibian species.

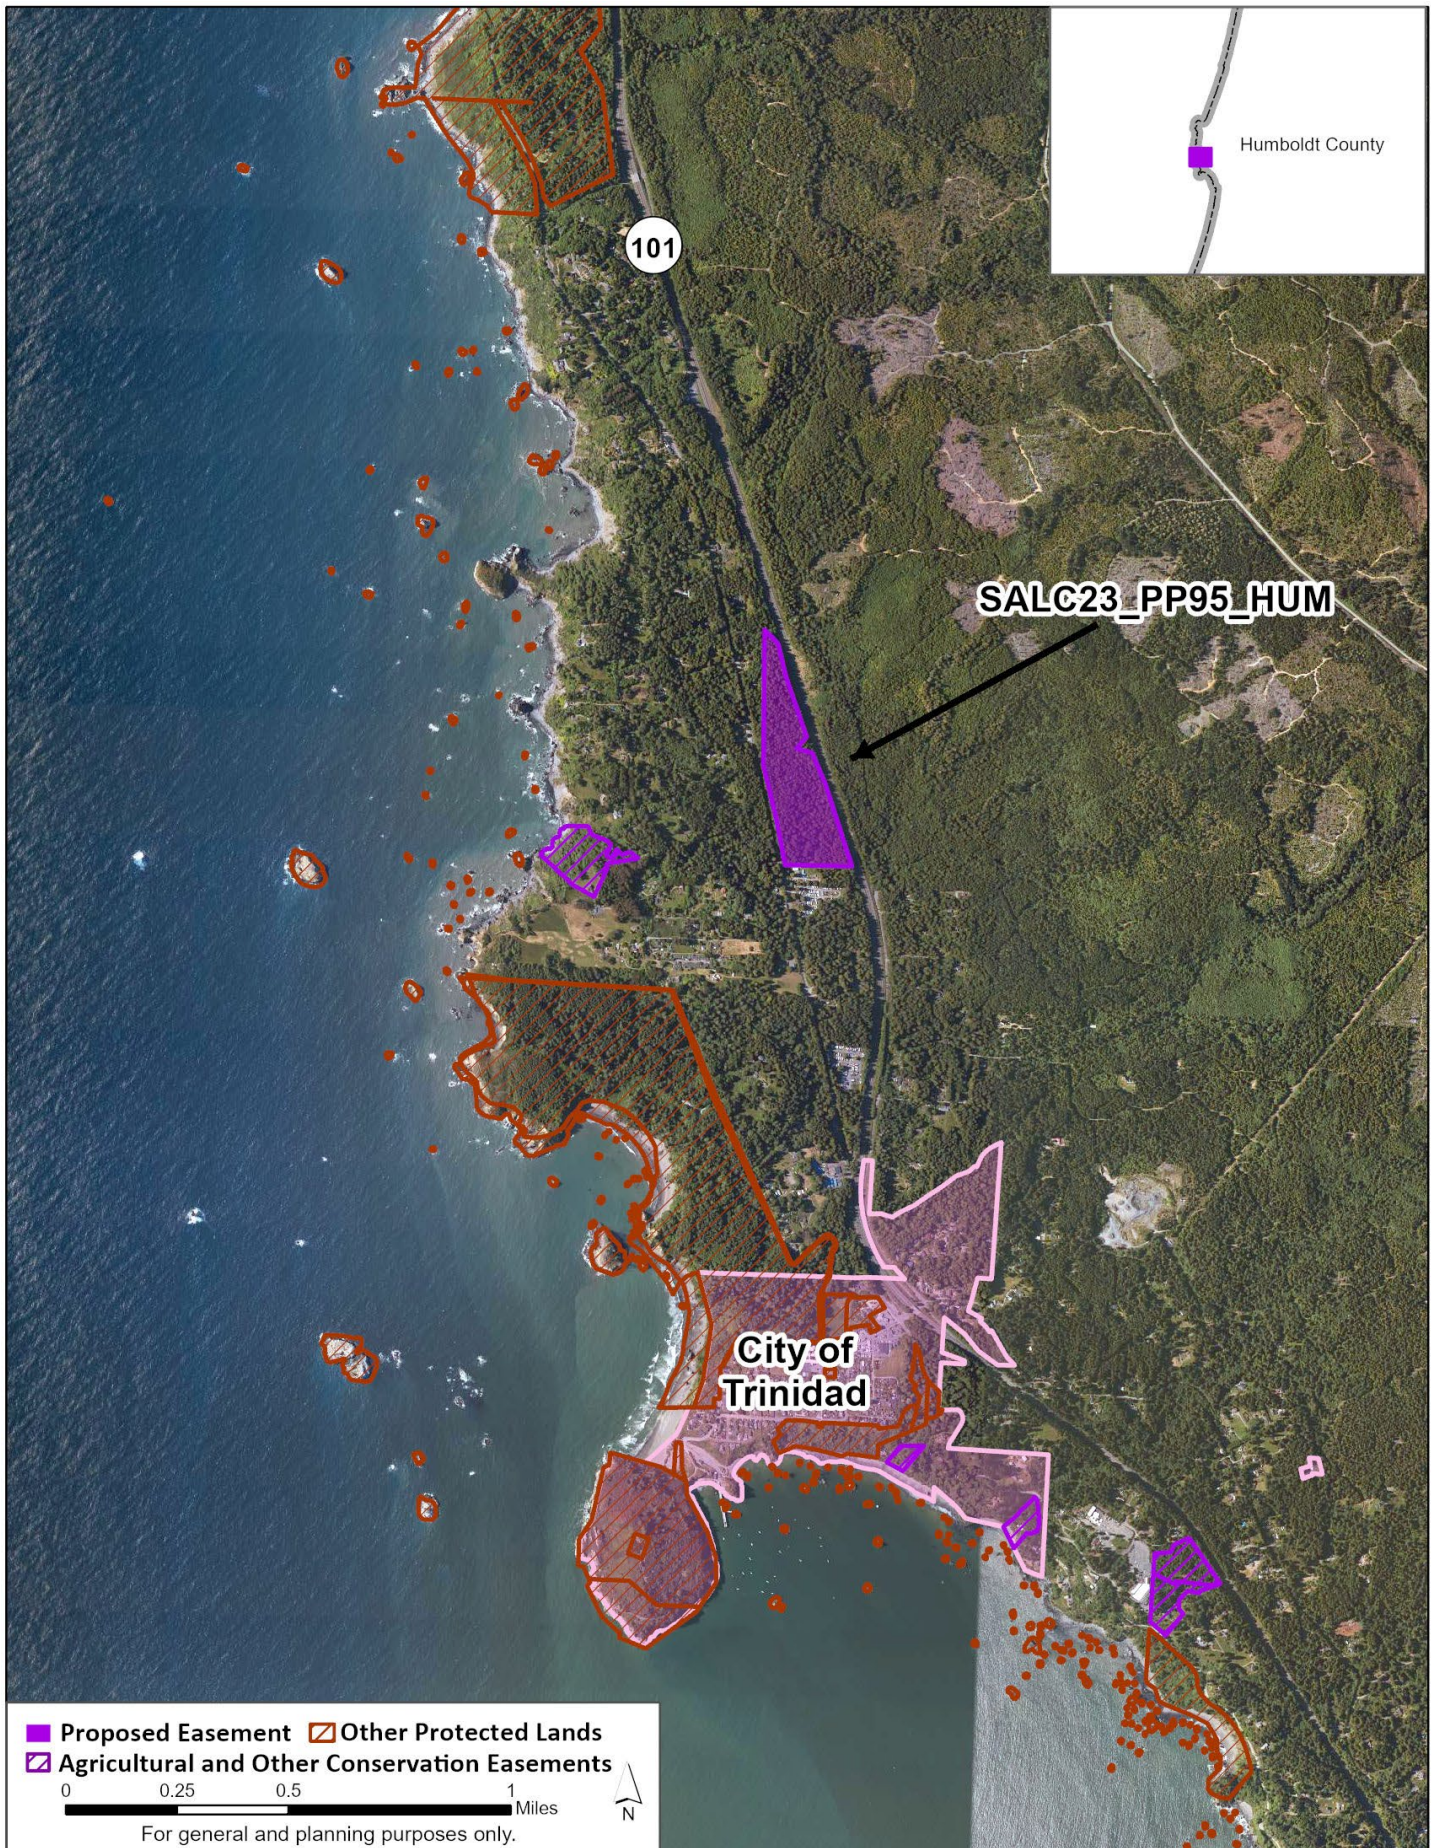

*Proximity to Protected Land:* The property is in proximity to the Trinidad State Beach Park and other protected lands.

**Notable Features**

The project includes development and implementation of a SALC-funded management plan

**Project Description**

This project is for an easement acquisition on a ±54-acre property in Fresno County. The soils are classified as Prime Farmland. The property is landowner operated and utilized for the year-round cultivation of various organic stone fruits, citrus, and pomegranates. The property has ample and adequate water for agricultural purposes provided by on-site groundwater wells.

**Strategic Value**

*Climate Resilience*

*Climate Smart Management Practices:* The property employs no-till practices and uses organic soil amendments to improve soil fertility and to sequester carbon. The property's tree crops also help to sequester carbon. All fruit grown on the property is certified organic by the California Certified Organic Farmers organization.

*Economic Sustainability & Food Security:* The agricultural operation provides employment and provides a variety of fruits for human consumption. A majority of the fruit grown on the property is sold locally at farmers' markets in the area. The fruit is also sold directly to stores, restaurants, and online.

**Notable Features**

Applicant applied for, and does not meet criteria to qualify for, Priority Population Benefits.

**Other Investment Targets**

A CA tribe is the applicant

**Project Description**

This project is for a fee title transaction for a tribe to acquire a ±154-acre property bordering the City of San Jose. The property is intended to be used for the restoration and cultivation of traditional foods, medicines, and basketry materials. The land will be used for cultural purposes including ceremonial practices.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is located in the foothills of East San Jose. The area hosts large lot estates and scenic views of the Bay Area. The property could be subdivided into 5-acre parcels. Protection of the property for cultural purposes would encourage development within city boundaries and away from the hills.

*Climate Resilience*

*Climate Smart Management Practices:* The property will be used primarily for cultural purposes. The tribe will manage the land using TEK, cultural burning, polyculture systems, and supplemental grazing. The community is actively engaged in efforts to restore degraded landscapes. With ownership of this land, the tribe is empowered to undertake restoration activities, such as reviving native plants, wildlife habitat conservation, and protecting ecologically sensitive areas. These efforts will benefit the environment and contribute to climate resilience and biodiversity.

*Equity*

*Priority Populations Benefits:* The tribe is committed to donating any surplus of the foods harvested to local food banks for low-income community members of East San Jose.

**Notable Features**

A portion of the property may be excluded.

The project includes development and implementation of a SALC funded cultural management / land stewardship plan.

**Project Description**

This easement acquisition project is for a ±597-acre cattle operation two miles outside of the City of San Luis Obispo. The rolling hills, grasslands, and mixed oak woodlands provide adequate forage for sustainable agricultural production while numerous troughs and year-round springs and creeks provide water for livestock and wildlife.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is located less than 2 miles from the City of San Luis Obispo and is bisected by Highway 101. Protection of the property would encourage development closer to existing infrastructure.

*Co-Benefits*

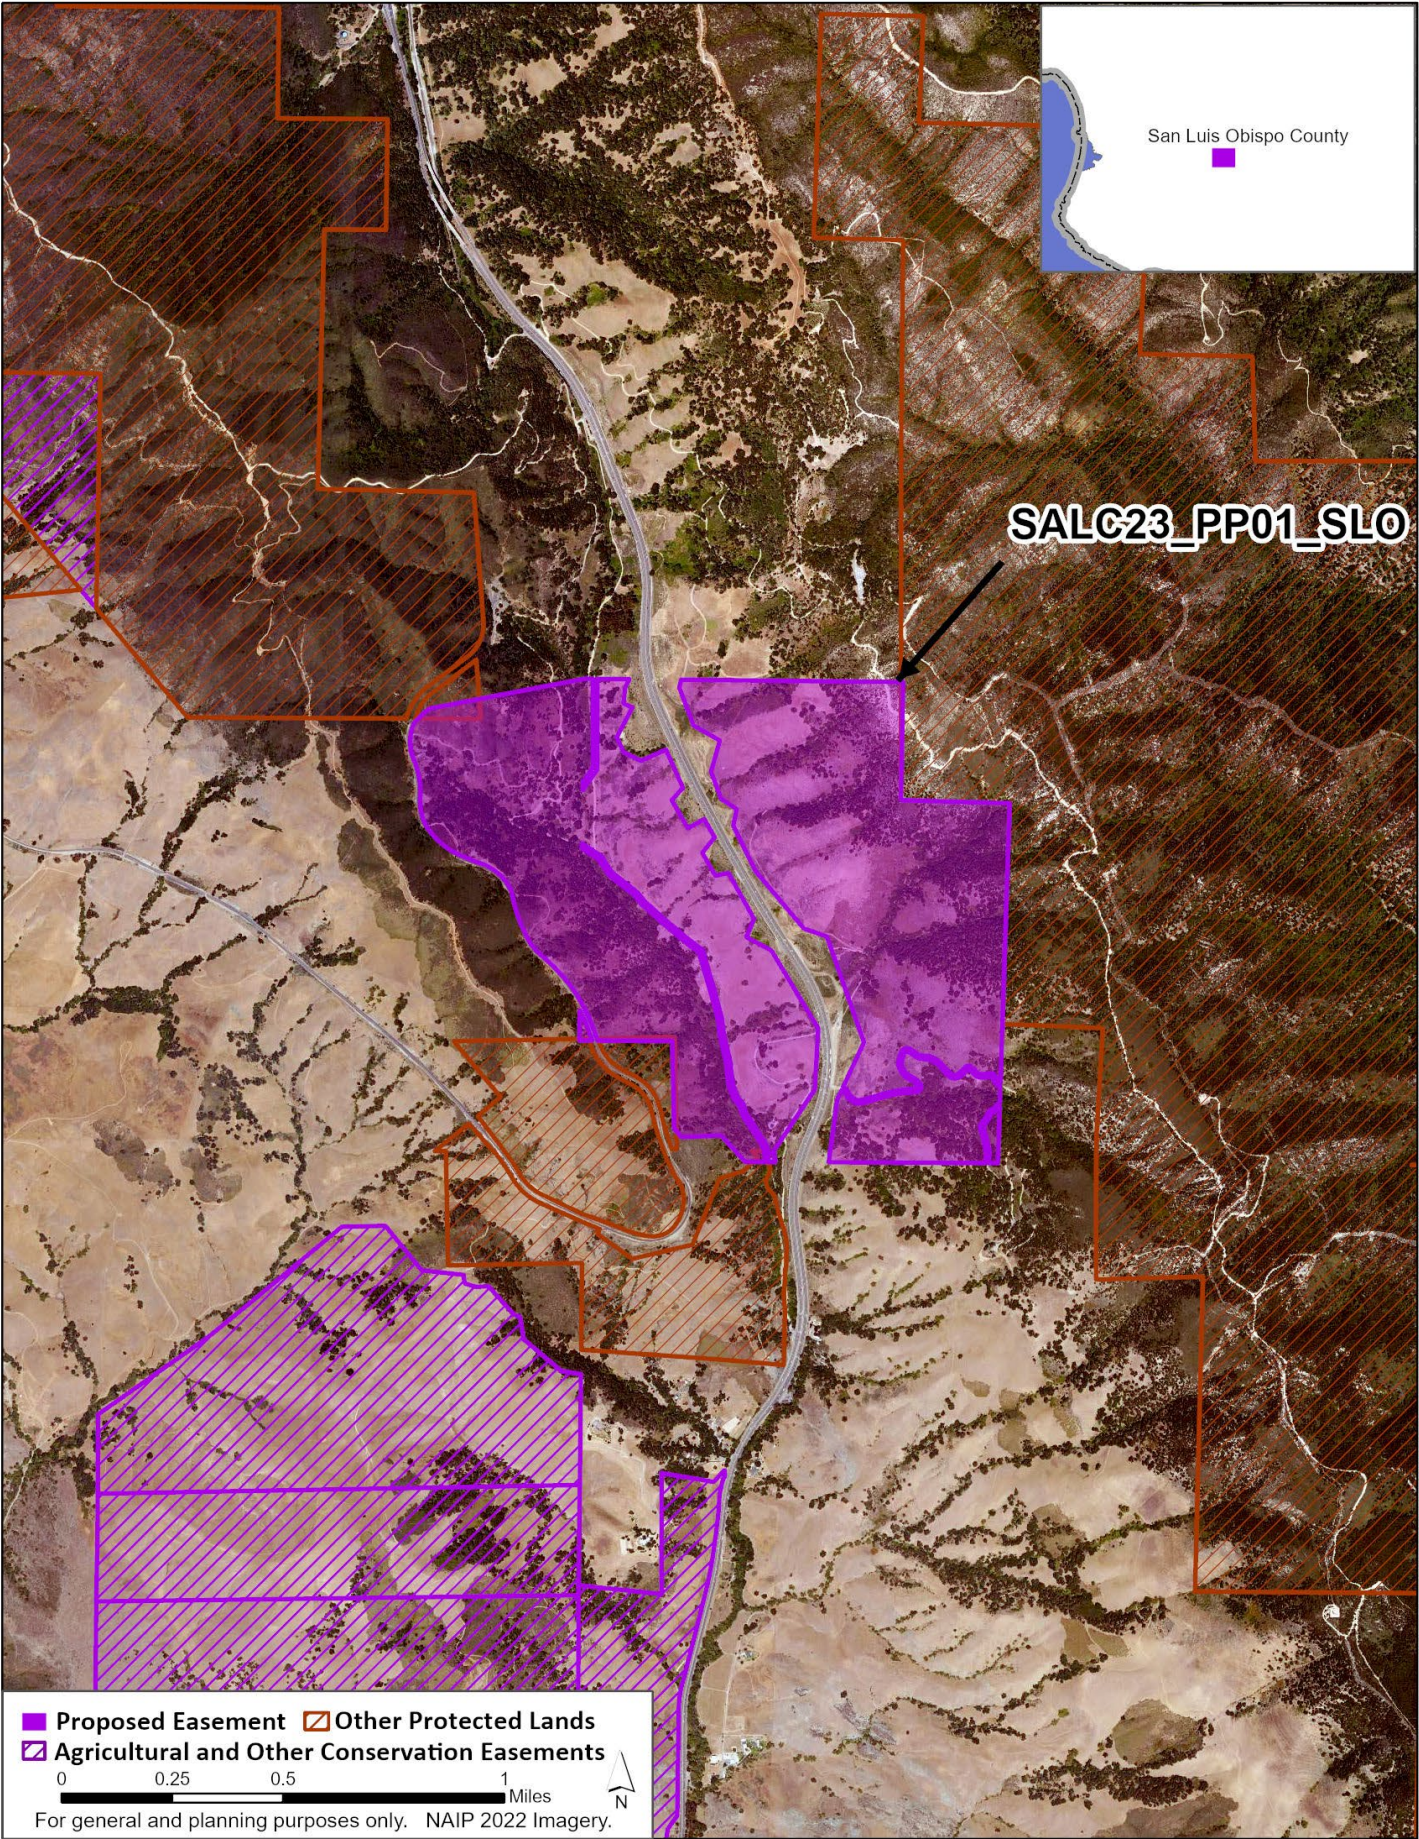

*Biodiversity and habitat connectivity:* The property includes a wide range of special status flora and fauna, including species dependent on serpentine soils. The easement area lies within red-legged frog habitat and the south-central California coast steelhead has been documented on the property by CDFW. Per CDFW, the property is designated as an "irreplaceable and essential corridor" and is adjacent to the conserved Miossi Open Space property. The wildlife-safe undercrossing beneath Highway 101 facilitates habitat connectivity.

**Project Description**

This easement acquisition project is for a ±2,750-acre property in Monterey County. The property is lessee operated and supports a multi-generational, year-round cow/calf grazing operation with 100 cow/calf pairs. A portion of the property has no-till dryland farming that produces grains for the grazing operation. Onsite wells and a year-round spring produce ample water supply for the grazing operation.

**Strategic Value**

*Climate Resilience*

*Climate Smart Management Practices:* Grazing reduces the risk of catastrophic wildfire by reducing fuel loads on the property.

*Co-Benefits*

*Biodiversity:* The property serves as a wildlife linkage with the southern coast mountain range. The property's grasslands and oak woodlands provide habitat for wildlife.

*Viewshed:* The property is visible from Highway 101.

*Proximity to Other Protected Lands:* The property is in proximity to land owned by the Bureau of Land Management.

**Notable Features**

The conservation easement will restrict agricultural intensification.

\$1,920,000

**Match Funding**

Match Funding Approved from two (2) sources,  
– CA Natural Resources Agency Environmental Enhancement and Mitigation (EEM) Program; and  
– El Dorado County Oak Mitigation Program.

**Priority Populations Benefits**

No

**Other Investment Targets**

None

**Project Description**

This conservation easement acquisition project is for a ± 1,005-acre property in El Dorado County. Most recently, the easement area has supported approximately 20 head of cattle on 170 acres for dryland grazing, November through June/July. Upwards of 580 acres of land are available for grazing as the landowner clears shrublands as a component of fuels reduction work with the NRCS, Cal Fire and the El Dorado-Georgetown RCD. Additionally, the property supports about 20 irrigated acres of walnuts and an acre-and-a-half of lavender; all grown for on-site uses.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is in proximity to urbanizing communities between Sacramento and Auburn along the Route 80 corridor north and west of the property and between Folsom and Placerville south of the subject property

*Sustainable Agriculture Use*

*Soil quality:* the property overlays 51 acres of Farmland of Local Importance.

*Co-Benefits*

*Biodiversity:* 607 acres of the Ranch are identified as a "Priority Conservation Area" per El Dorado County's General Plan and the Oak Resources Management Plan Addendum, a designation that identifies contiguous areas of important oak woodland habitats. Creeks on the Ranch drain directly into the South Fork American River protecting aquatic habitat.

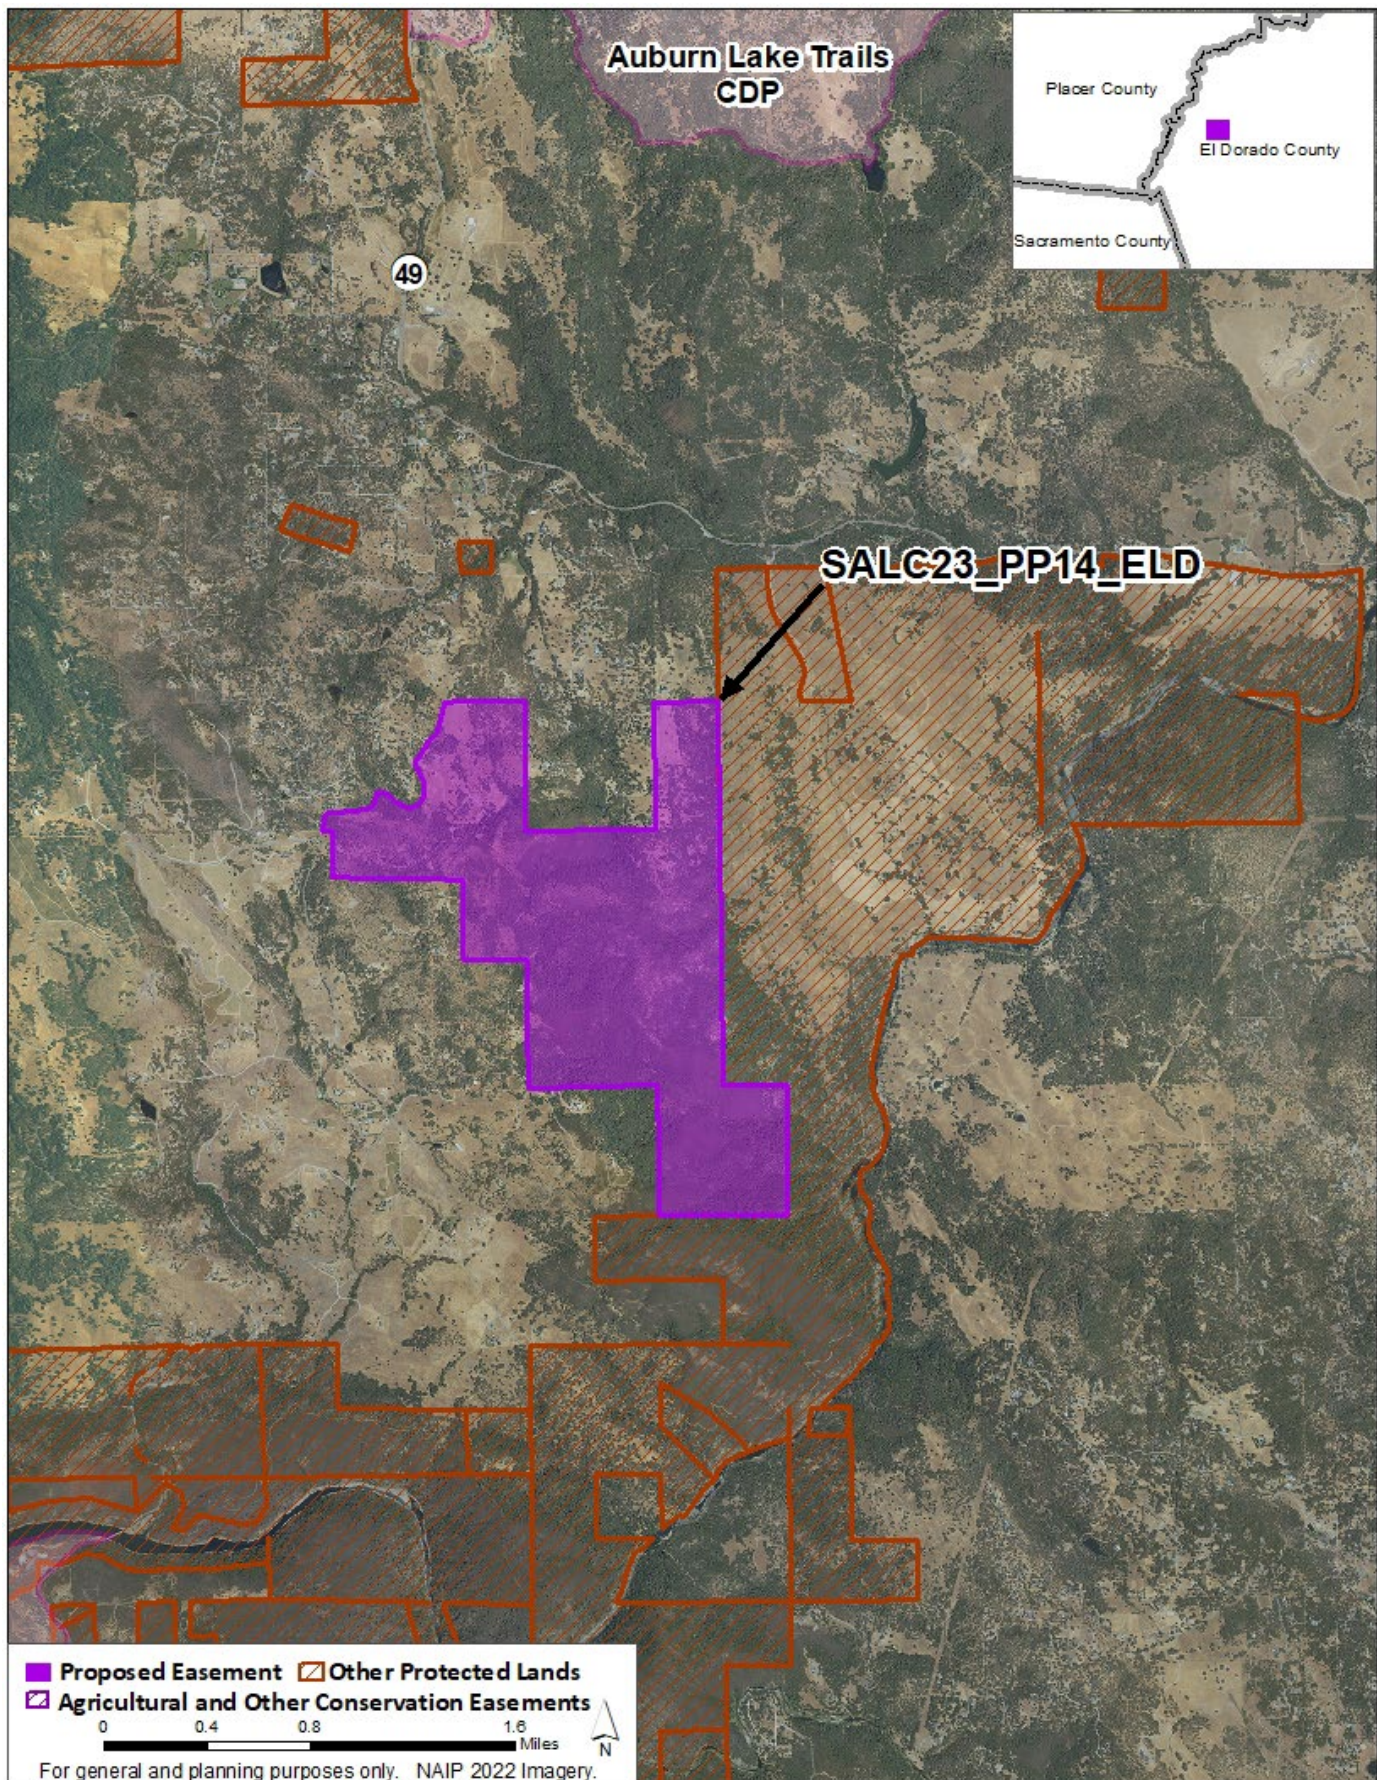

*Source Water Protection:* This project contributes to the protection of the South Fork American River, an important water source for the Folsom Lake Reservoir and eventually the Sacramento-San Joaquin Delta. Protection of the Ranch's intact oak woodland, riparian, grassland, and wetland habitats slow down the movement of water and in the process prevents erosion, filters nutrients and contaminants, improves groundwater recharge, and ultimately improves the quality of water flowing downstream.

**Notable Features**

The project includes development and implementation of a SALC funded management/carbon farm plan.

**Project Description**

This fee-title project is for a ± 869-acre property located in Monterey County. The property is lessee operated and supports both a grazing operation and a farming operation. Approximately 35 head of cattle are grazed year-round. A regenerative farming operation grows various organic row crops on approximately 68 acres. A 2-acre area is leased for a seasonal, locally operated pumpkin patch. Onsite wells provide ample water supply to the agricultural operation.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is in proximity to the City of Salinas and adjacent to the communities of Serra Village, Ambler Park, and San Benancio.

*Co-Benefits*

*Biodiversity:* The property hosts native grasslands and oak woodlands that provide habitat for various native plants and animals, including mountain lions, the California red-legged frog, and the American badger. The property also serves as a wildlife linkage between Fort Ord National Monument, the Sierra de Salinas, the Santa Lucia Mountain Range, the Los Padres National Forest, and the Ventana Wilderness.

*Viewshed:* The property provides scenic views along Highway 68.

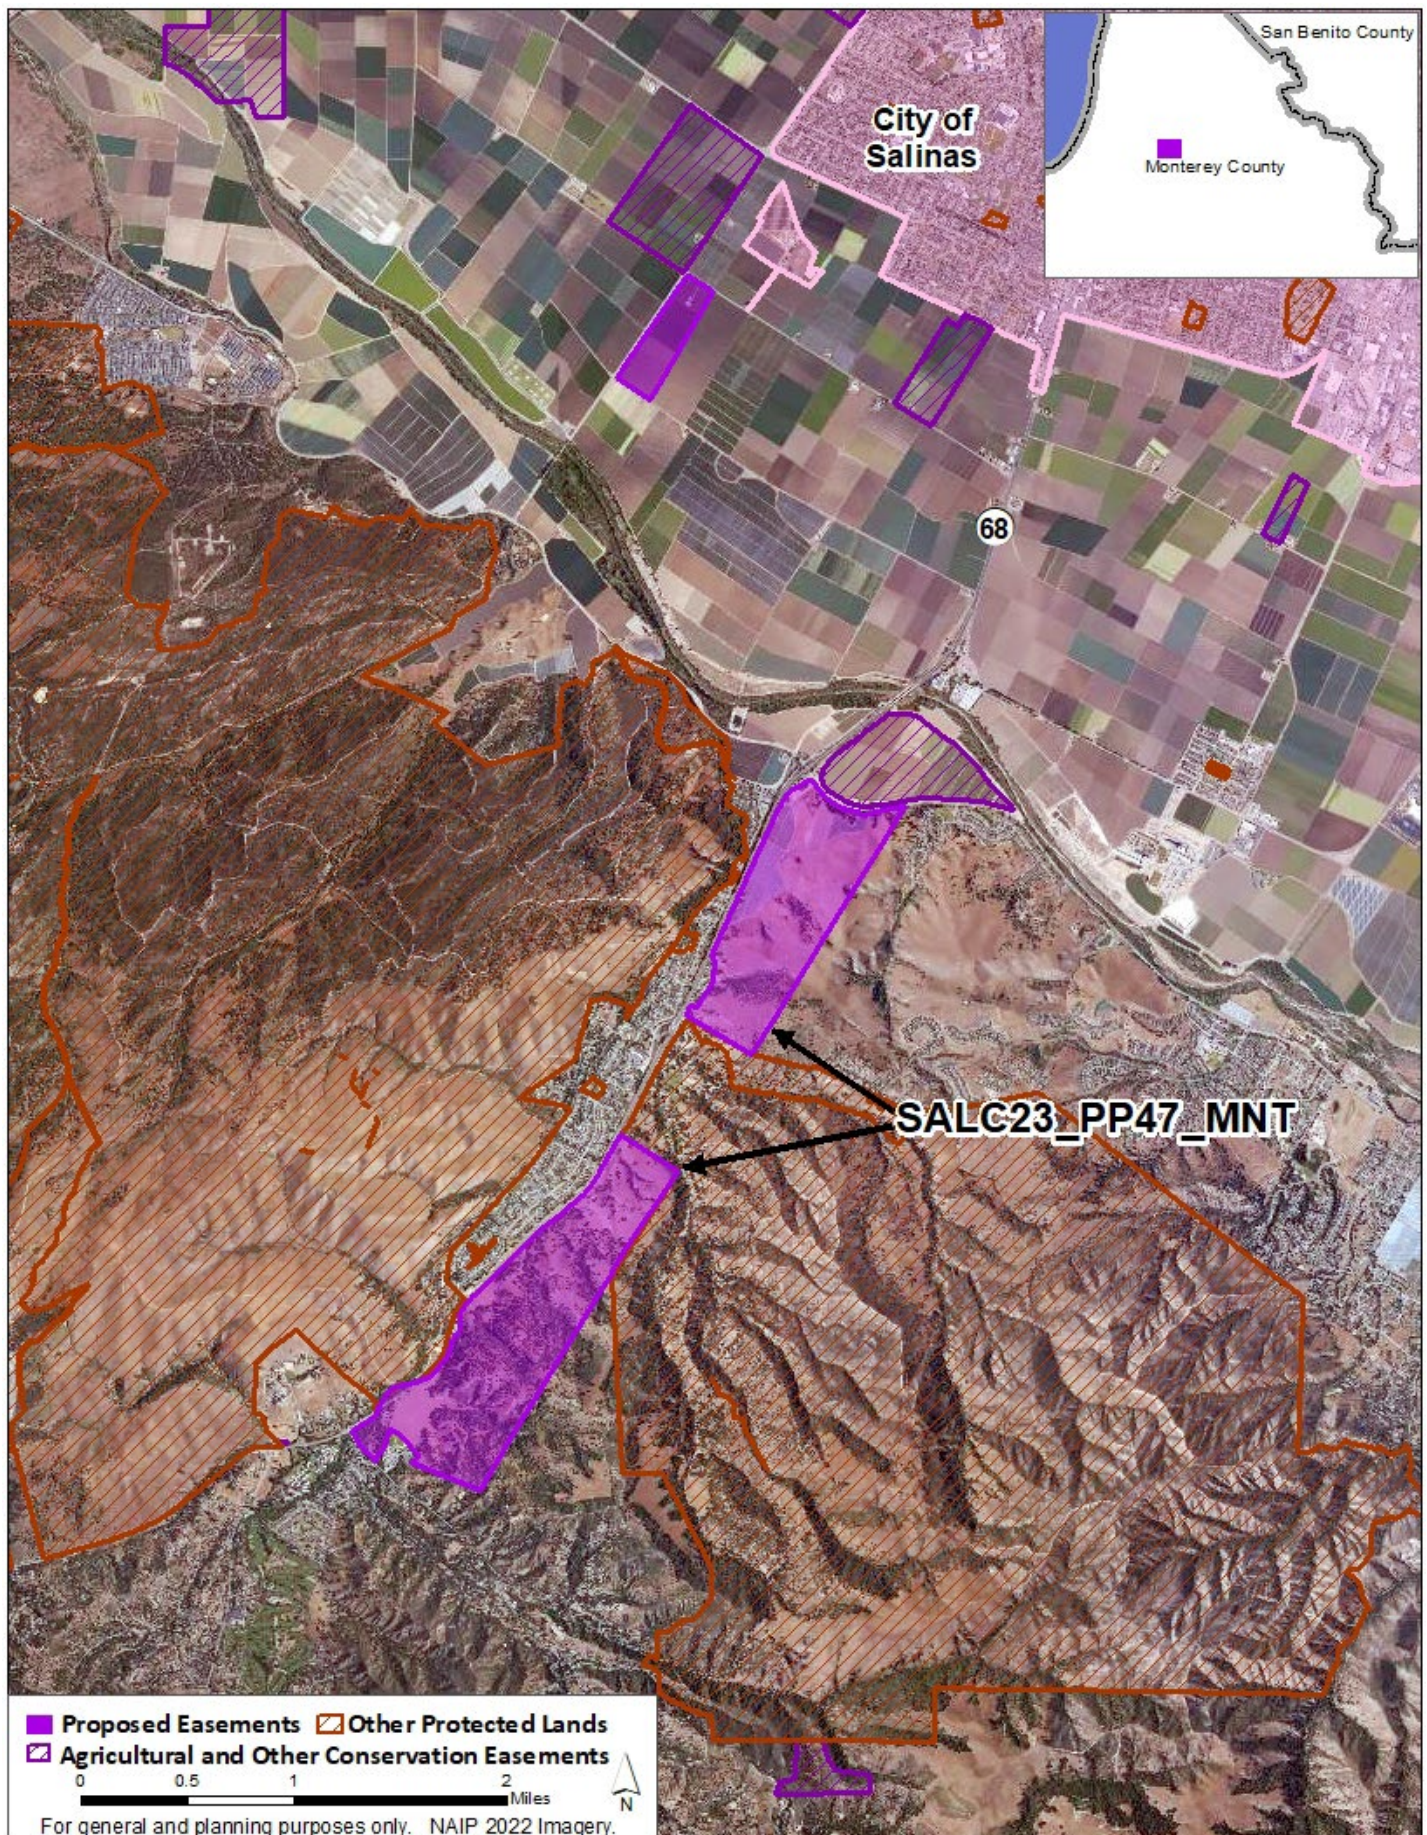

*Proximity to Protected Land:* The property borders Toro Regional Park and Mark's Ranch, a fee-title property held by Big Sur Land Trust. The property is also in proximity to Fort Ord National Monument.

**Notable Features**

Agricultural cultivation will be restricted to designated agricultural areas.

**Other Investment Targets**

Provides secure land tenure to beginning ranchers

**Project Description**

This easement acquisition project is for a ±244-acre ranch located in the foothills of eastern Madera County. The ranch includes grasslands, mixed oak and conifer woodlands, and riparian areas along Fine Gold Creek. The owners purchased the ranch in 2021 and have since established a free-range, organic grass-fed beef operation that is marketed directly to consumers. The ranch currently supports 15 cow/calf pairs.

**Strategic Value**

*Climate Resilience*

*Climate Smart Management Practices:* The landowners have dramatically reduced the property's fuel load through mastication. Grazing the property will help maintain the reduced fuel load and thereby reduce the risk of catastrophic wildfire on the property and the surrounding community.

*Sustainable Land Management:* Acquisition of a conservation easement will include the development of a forest and rangeland management plan developed by a Certified Rangeland Manager. Among other things, the plan will help protect the watershed integrity of Fine Gold Creek.

*Co-Benefits*

*Biodiversity:* The ranch falls within an area designated by the Sierra Nevada Foothills Wildlife Connectivity Project as "Irreplaceable and Essential Corridor". Applicant notes that RePlan identifies the ranch as very high in terrestrial intactness.

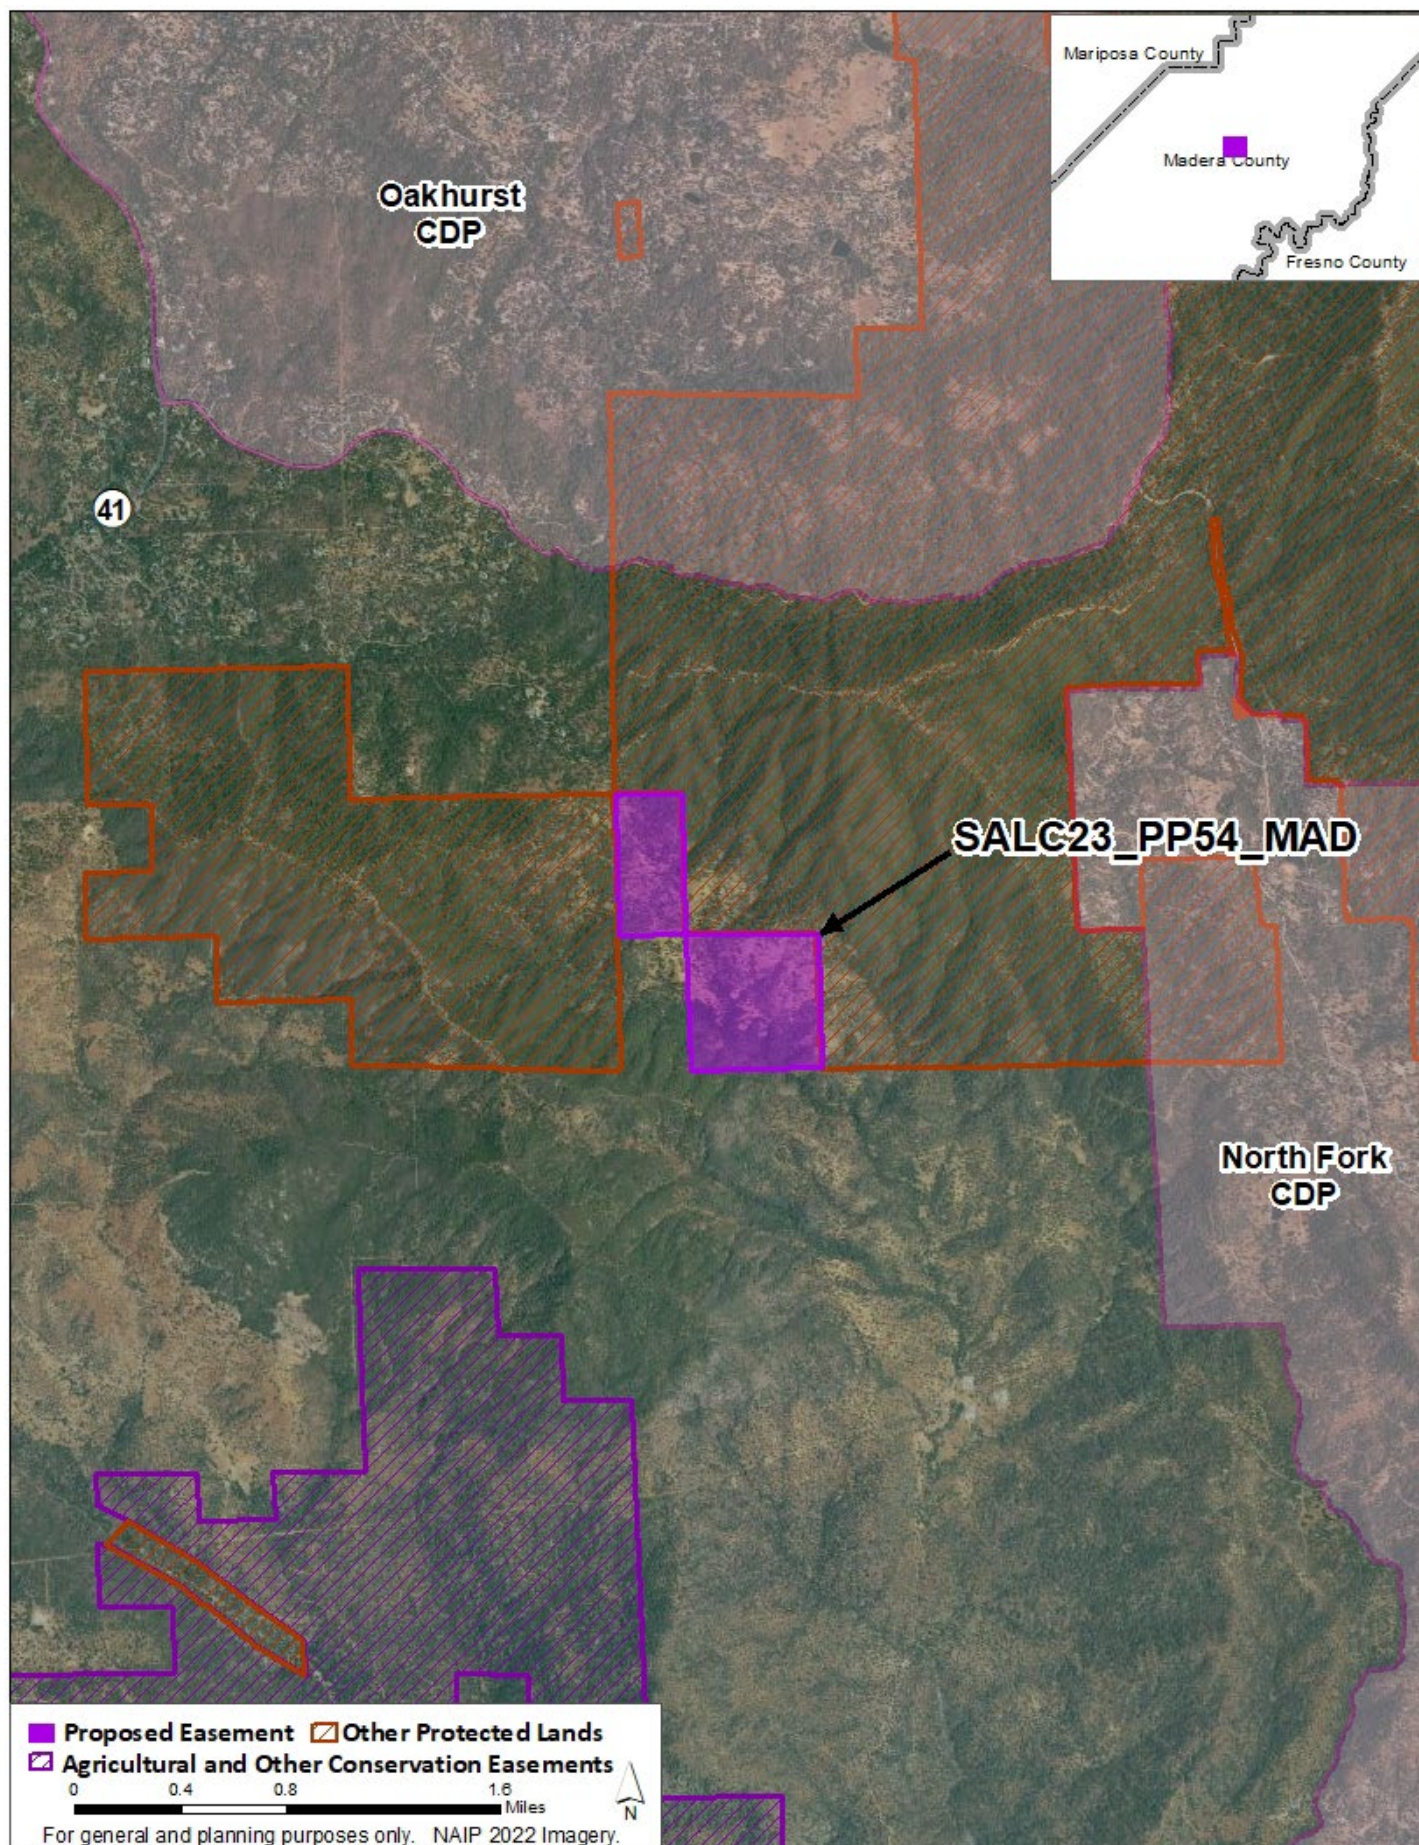

*Economic:* Supports the growth of entrepreneurship opportunities and the local economy through a direct-to-consumer business model.

**Notable Features**

The conservation easement will restrict agricultural intensification to a maximum of 10% of the ranch.

applicant

**Project Description**

The project is for a fee title acquisition of a ±345-acre property located in San Luis Obispo County. The property contains an aquaculture facility and culturally significant resources. The acquisition will support the cultivation and stewardship of traditional foods, the implementation of indigenous land management practices, the preservation of cultural heritage, and the utilization of traditional knowledge to steward the land.

**Strategic Value**

*Climate Resilience*

*Climate Smart Management Practices:* The project would include the implementation of a 3-year stewardship plan and restoration efforts focused on the Villa Creek estuary and riparian corridor.

*Equity*

*Tribal Co-management & Access:* This project is led by a tribal non-profit and will support secure land tenure for a California Native American Tribe.

*Co-Benefits*

*Biodiversity:* Villa Creek runs through property. It is an important coastal watershed for steelhead trout and serves as a wildlife corridor and habitat connector.

*Proximity to Protected Land:* The property is situated between Estero Bluffs State Park and Harmony Headlands State Park.

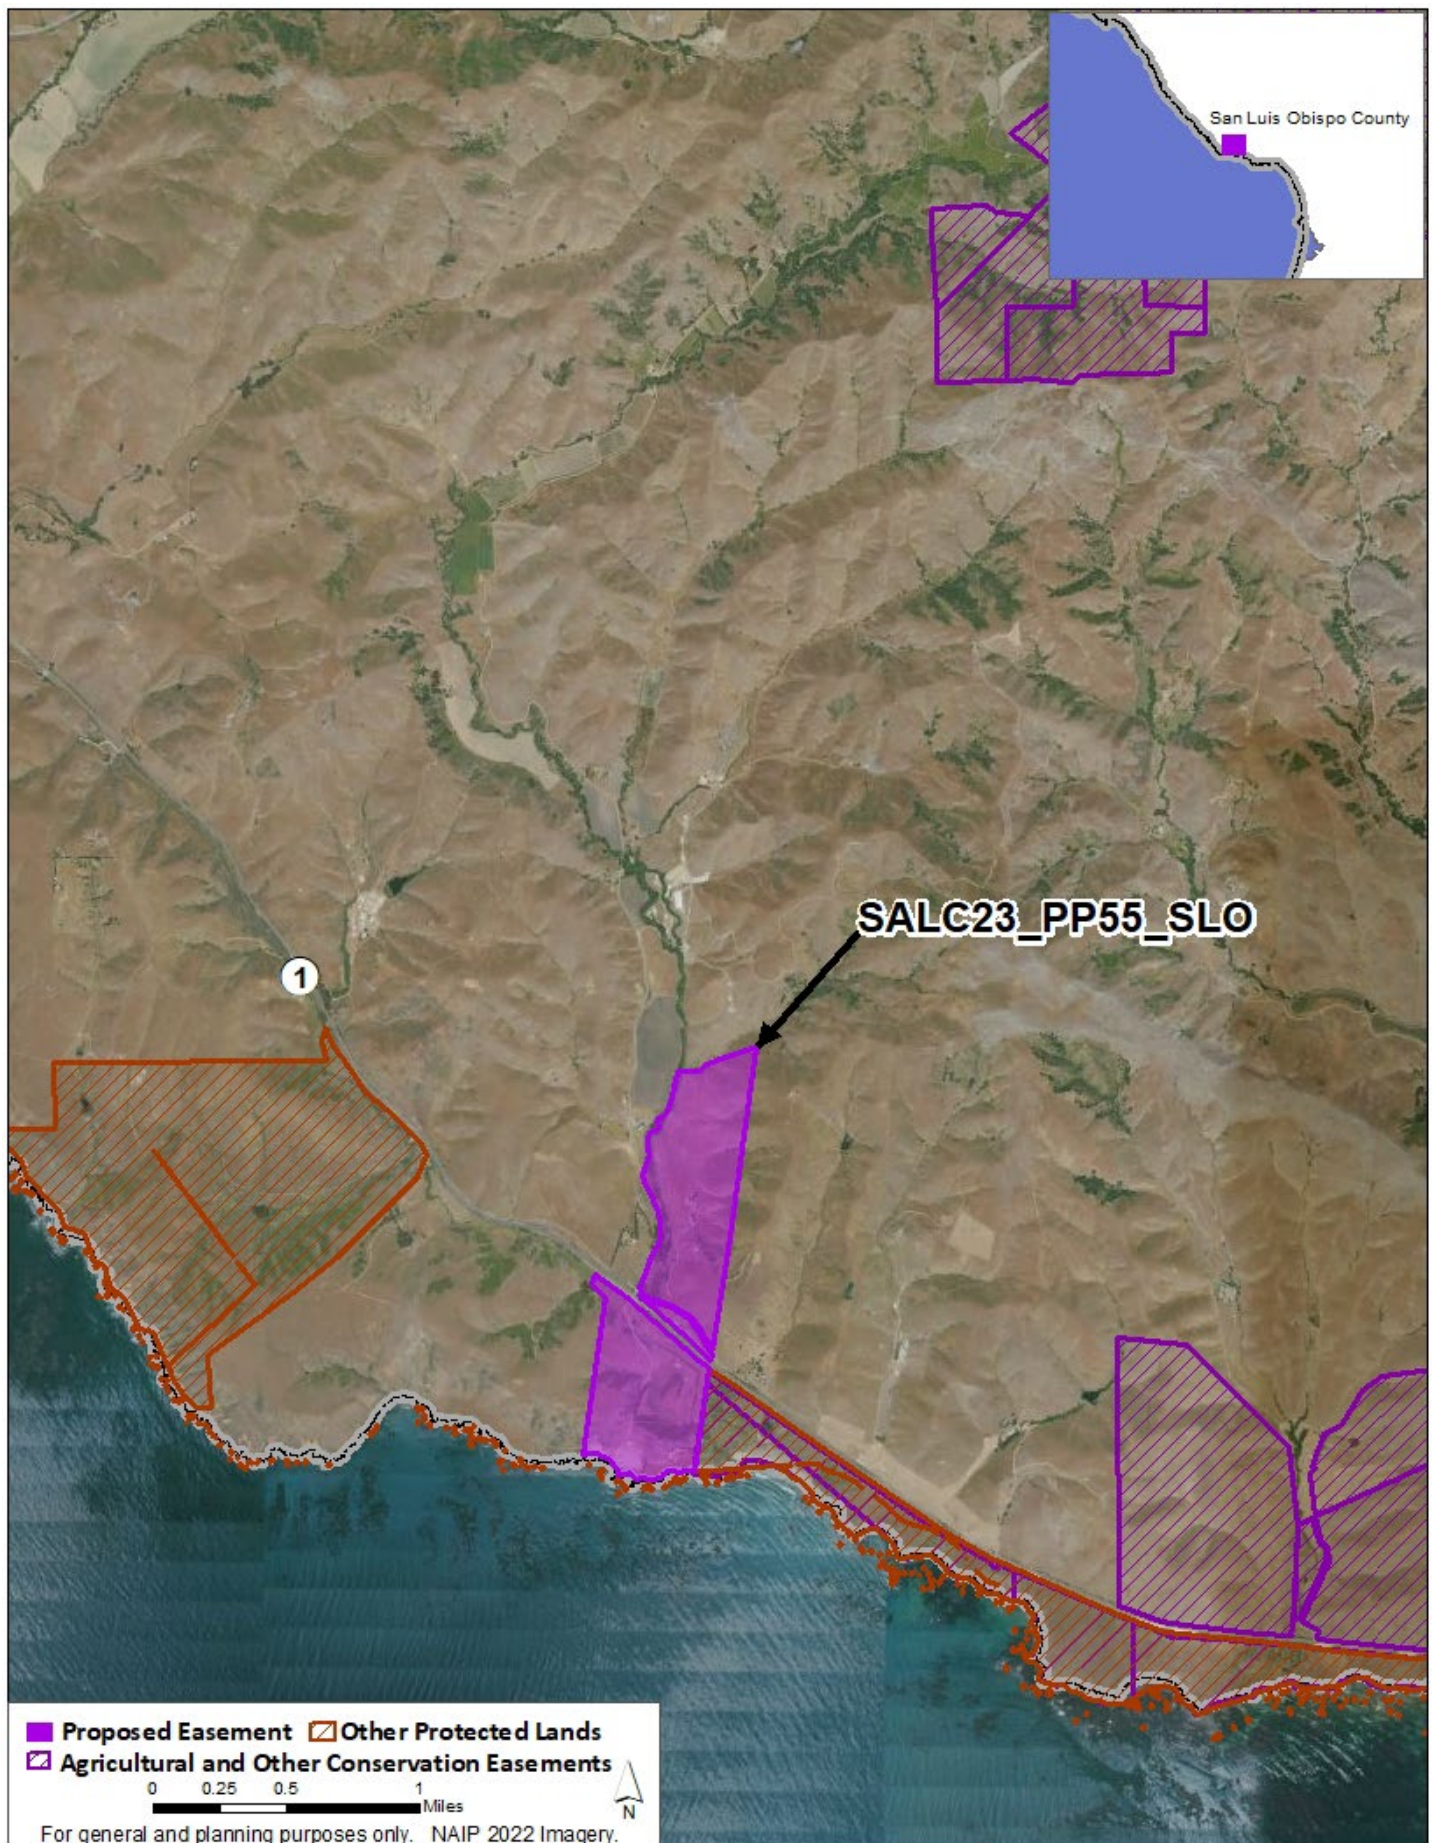

*Economic:* The aquaculture facility would support workforce development and serve as an entrepreneurial incubator. In partnership with regional universities, community colleges, and other tribal nations, the aquaculture facility could be used for ecological restoration and aquaculture training programs.

**Project Description**

This project is for the acquisition of three conservation easements on a ±556-acre property near the City of Hollister in San Benito County. The project is comprised of three contiguous legal parcels that support grazing and irrigated agriculture.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is located less than 3 miles from the City of Hollister and is at risk of conversion to residential development. Conservation of the property would support infill in the nearby city limits.

*Co-Benefits*

*Biodiversity:* The grassland and ephemeral wetlands on the property provide habitat for many native plants and animals, some of which are special status species such as California tiger salamander and American badger. The property sits at the foothills of the vast open spaces in the Diablo Mountains.

**Notable Features**

Prior subdivision has conditions limiting development on the two northern properties.

The project is requesting greater than \$60,000 for associated costs due to the number of easements.

**Project Description**

This project is for the purchase of a conservation easement on a ±306-acre property located 12 miles east of the community of Hickman. The property has adequate water availability from existing stock ponds and seasonal sources, along with cross fencing that enables rotational grazing to optimize forage and reduce overgrazing. From fall through spring, the property supports a cow/calf operation with approximately 50 head varying year-to-year depending on forage and water availability. The cattle are sold at the Cattlemen's Livestock Market in Galt.

**Strategic Value**

*Sustainable Agriculture Use*

*Soil quality and Water Management:* The property has been used for dryland grazing for generations and is managed using rotational grazing supported by cross-fencing. These practices are well suited to the property's natural conditions—soils, topography, and limited water—and ensure long-term productivity without resource degradation.

*Co-Benefits*

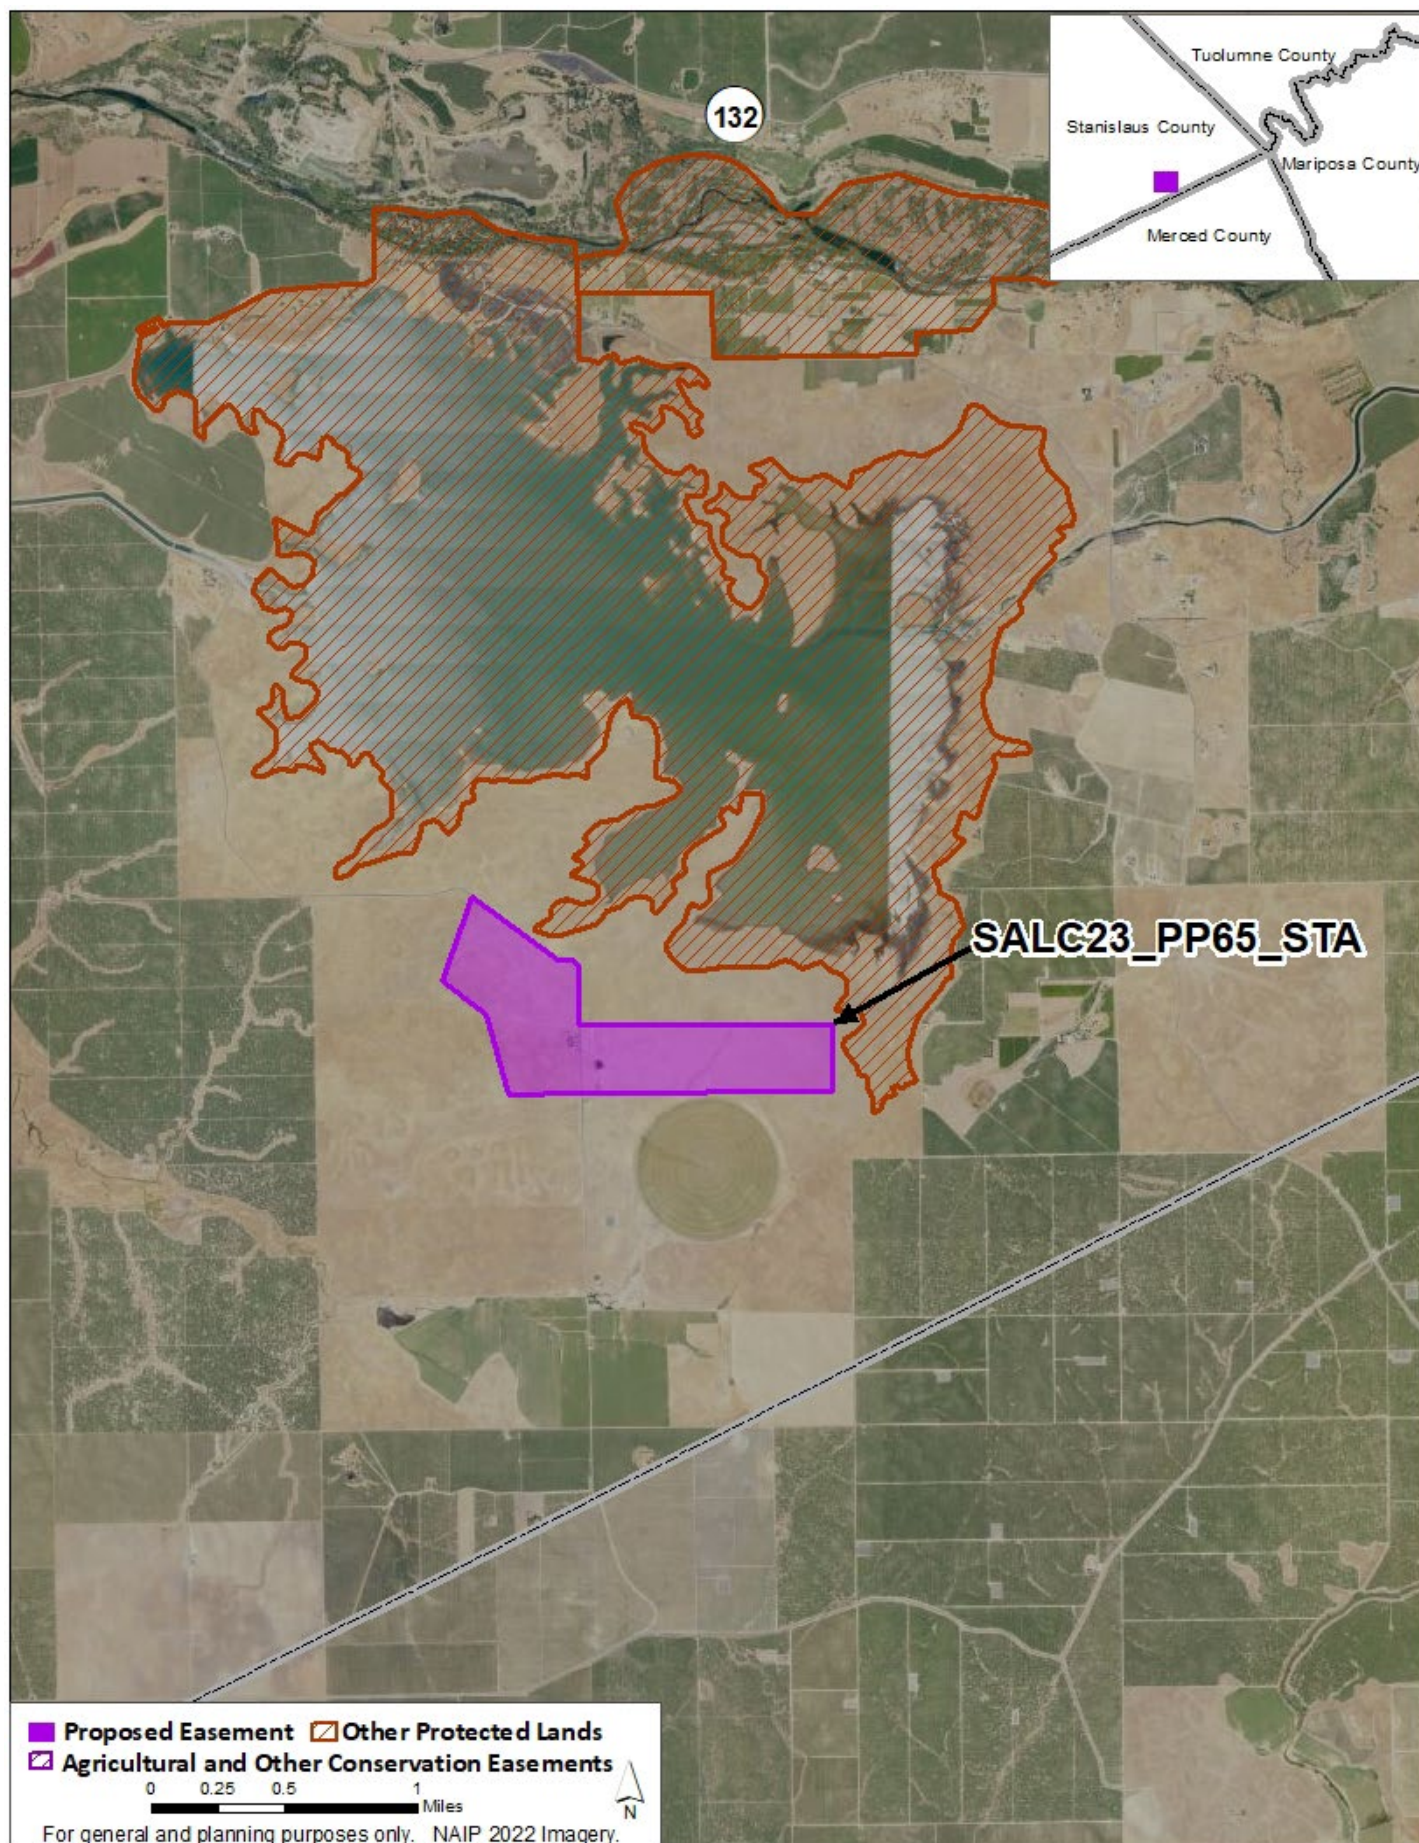

*Biodiversity:* The property includes vernal pools and native grasslands, lies within the Merced Vernal Pool Core Area, and ranks high for aquatic biodiversity.

**Notable Features**

The project would limit agricultural intensification to exclude potential for irrigated agriculture.

Provides secure land tenure  
to a CA tribe

**Project Description**

This fee acquisition project is for a ±560-acre ranch located near the City of Buellton. Applicant proposes to purchase the ranch in fee and transition from cannabis cultivation to organic vertical farming using the existing cannabis greenhouses and infrastructure. Grazing would continue on the rest of the ranch.

**Strategic Value**

*Climate Resilience*

*Climate Smart Management Practices:* Applicant will initiate land restoration through indigenous permaculture practices, rooted in TEK. Applicant will also implement regenerative farming practices. Continued grazing and the introduction of cultural fire ecology on the property will help reduce the risk of catastrophic wildfire.

*Economic Sustainability and Food Security:* Creation of local jobs and support of local farm services. Applicant plans to develop food programs that enhance access to fresh food.

*Equity*

*Equity:* The acquisition is led by and will provide land access and secure tenure to a California Native American Tribe.

*Co-Benefits*

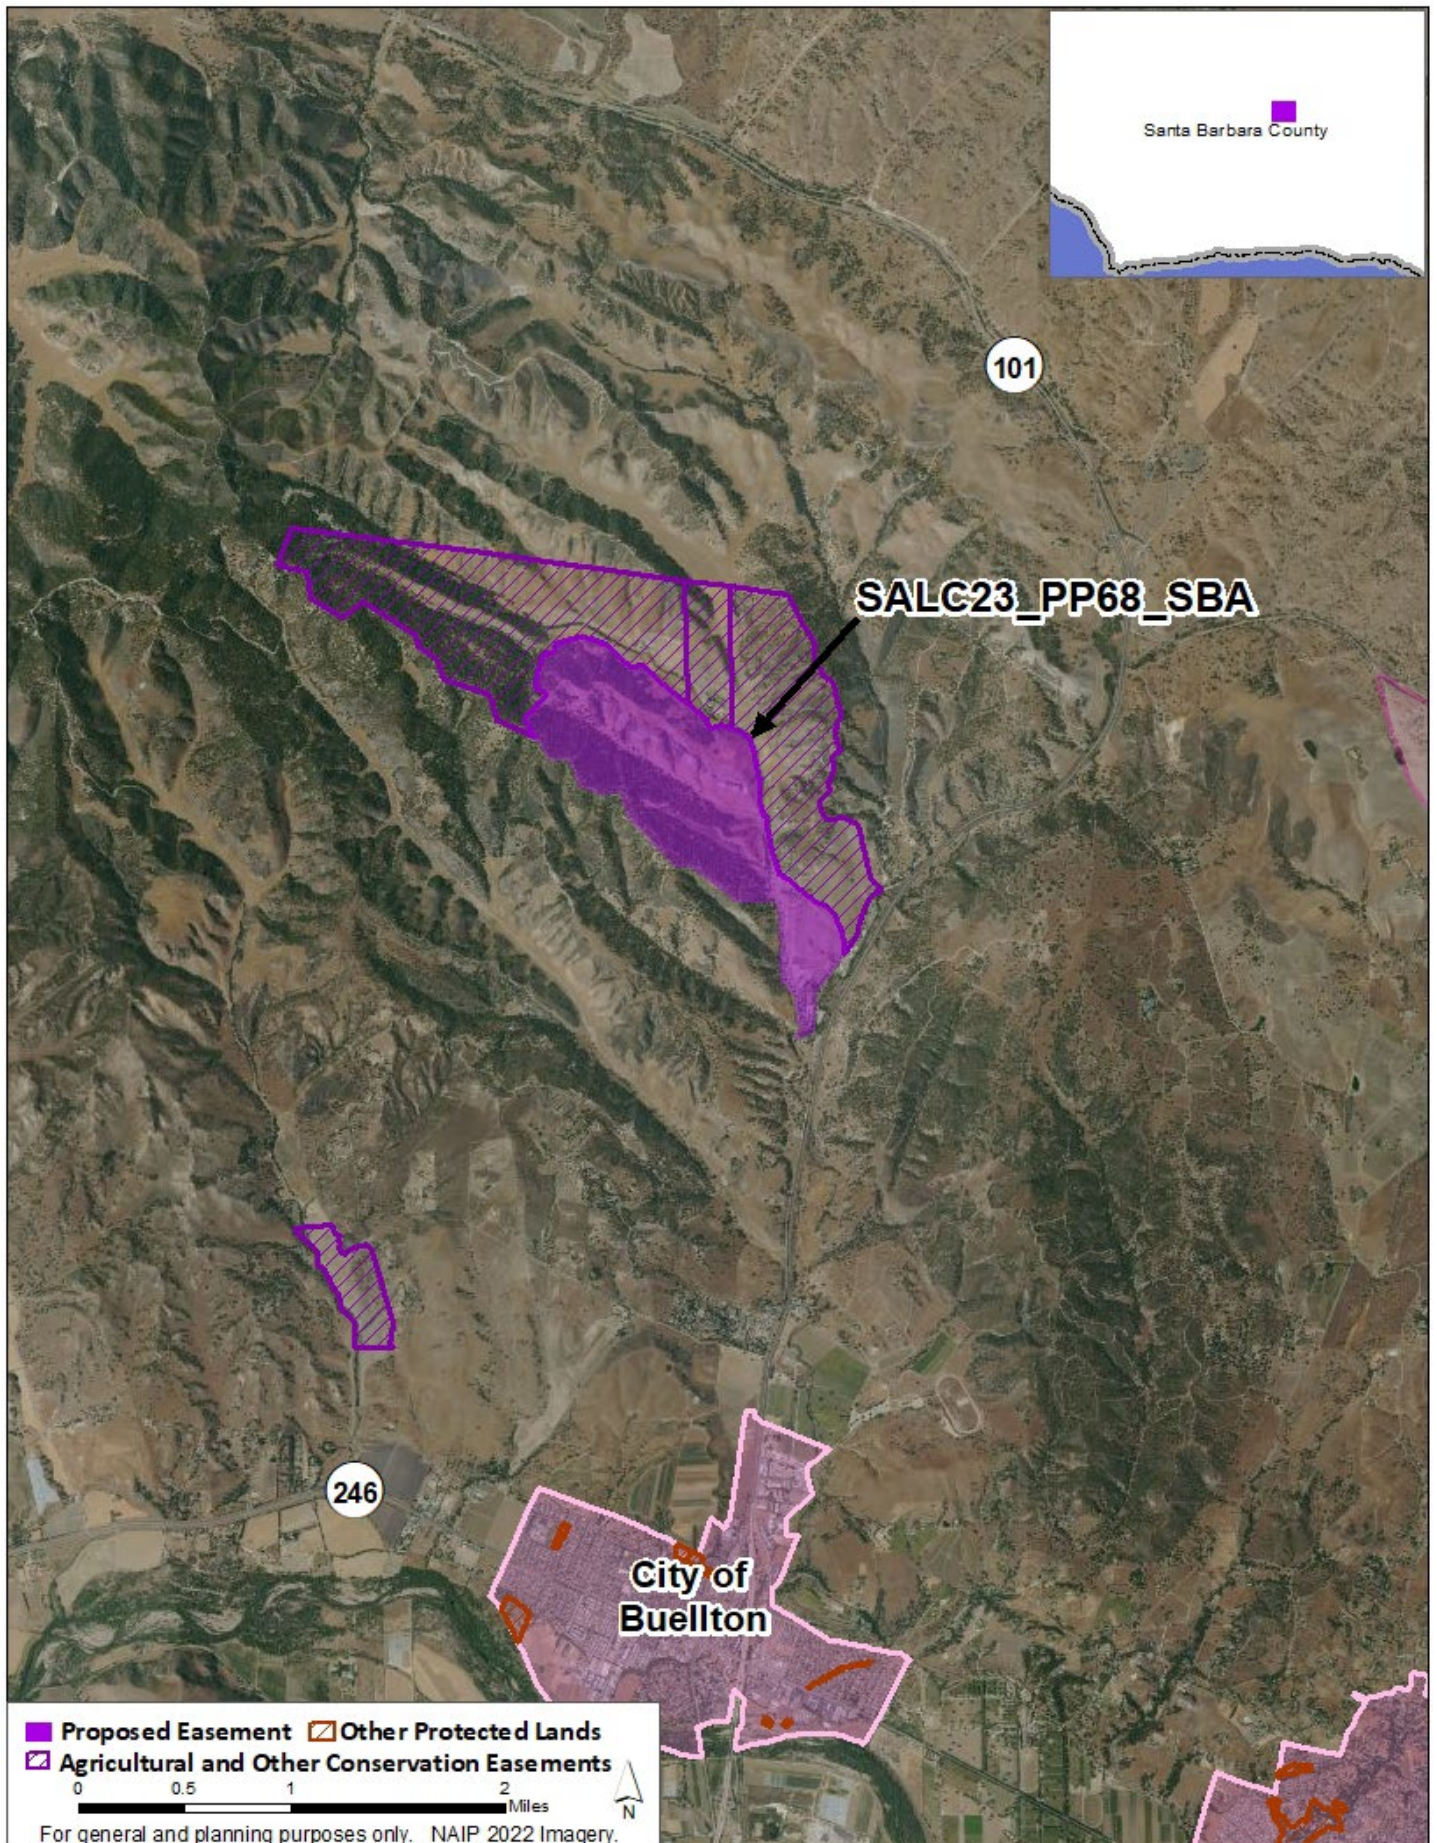

*Biodiversity:* The ranch's maritime chaparral, oak woodlands, and seasonal wetlands host numerous endemic plant species and wildlife.

**Notable Features**

The project includes the development and implementation of a SALC-funded management plan.

**Match Funding**

Funders Identified – Wildlife  
Conservation Board;  
California Deer Association

**Priority Populations Benefits**

No

**Other Investment Targets**

None

**Project Description**

This easement acquisition project is for an ± 1,173.58-acre property located in Butte County. The property is lessee operated and is utilized for a cattle grazing operation. The property supports 75 to 100 cow/calf pairs during the winter months. The cattle are processed at local facilities located in Oroville and Chico, and the lessee sells their products at farmers markets in the region. The operation has ample and reliable water provided from ponds and an agricultural well.

**Strategic Value**

*Climate Resilience*

*Climate Smart Management Practices:* The cattle are rotationally grazed to maintain the health of the land and to ensure access to high-quality forage, while allowing pastures to rest and regenerate. Grazing on the property reduces the risk of catastrophic wildfire by reducing fuel loads on the property.

*Co-Benefits*

*Biodiversity:* Nestled in the transition zone between the Central Valley and the Sierra Nevada foothills, the Ranch lies adjacent to thousands of acres of privately and publicly protected lands, serving as a wildlife corridor and providing habitat connectivity. This strategic location makes it a biodiversity hotspot with high connectivity, supporting a wide range of species including golden eagles, Cooper's and red-tailed hawks, black bears, bobcats, mule deer, wild turkeys, and more. The property contains grassland, blue oak woodlands, and blue oak-foothill pine.

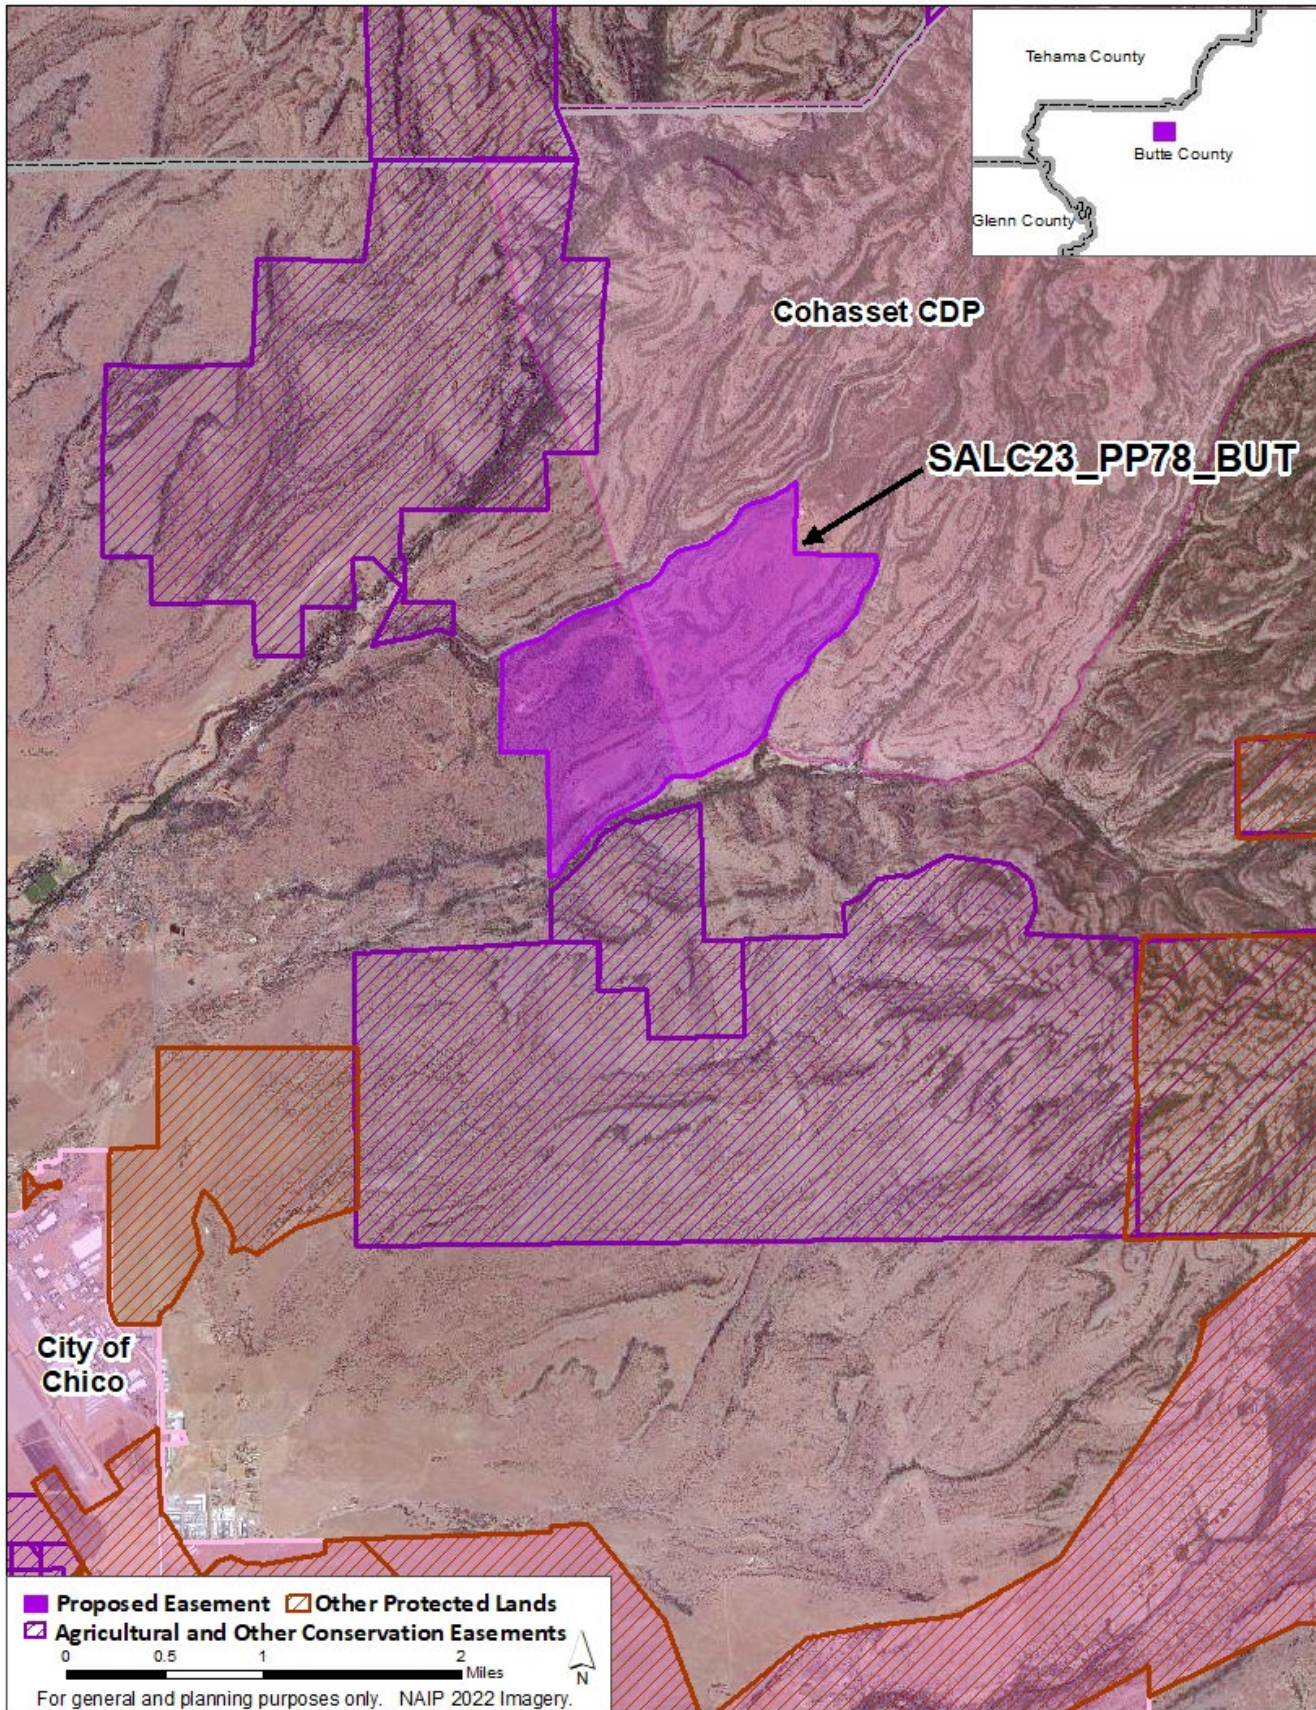

*Proximity to Protected Land:* The property is adjacent to thousands of acres of other protected lands held under easement by Northern California Regional Land Trust and CDFW.

**Notable Features**

The project includes development and implementation of a SALC funded management/carbon farm plan.

**Other Investment Targets**

None

**Project Description**

This project is for the purchase of a conservation easement on a ±4,930-acre property located in Stanislaus and Merced counties. Though the number of cattle year-to-year depends on water and forage availability, the property typically hosts a year-round cow/calf operation of approximately 500 head and a smaller stocker operation. There are also approximately 30 acres of irrigated pasture. Grazing is managed by using cross fencing and rotational grazing.

**Strategic Value**

*Co-Benefits*

*Biodiversity:* The property hosts critical habitat for species like the vernal pool fairy shrimp and the California tiger salamander. Ecologically significant areas on the property have been identified as essential wildlife corridors with high terrestrial and aquatic habitat value.

*Proximity to Protected Land:* Conservation of the property would add to an existing block of conserved rangeland owned by the same landowner.

**Notable Features**

Mineral rights to the property are severed and active surface mining is apparent on nearby and neighboring properties.

**Other Investment Targets**

None

**Project Description**

This project is for a fee title acquisition of a ±586-acre property located near the City of San Juan Bautista. The property is currently leased for a year-round cattle operation that runs approximately 40 cow-calf pairs. The operation is supported by two developed springs with troughs, a stock pond in the northern portion of the property, and a spring box and water trough in the southern portion. The lessee uses the corrals on the adjacent ranch for moving cattle on and off the subject property.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is at risk of conversion, as evidenced by recent subdivision and development of rangelands in the area. Conservation of the property would support infill within San Juan Bautista.

*Co-Benefits*

*Biodiversity:* The property is in a critical linkage between the Gabilan Range and the Santa Cruz Mountains. The Santa Cruz Mountains-Gabilan Range linkage is critical to the 315-mile-long latitudinal gradient between the southern tip of the Inner Coast Range at the Transverse Range Mountains, and the northern tip of the Santa Cruz Mountains.

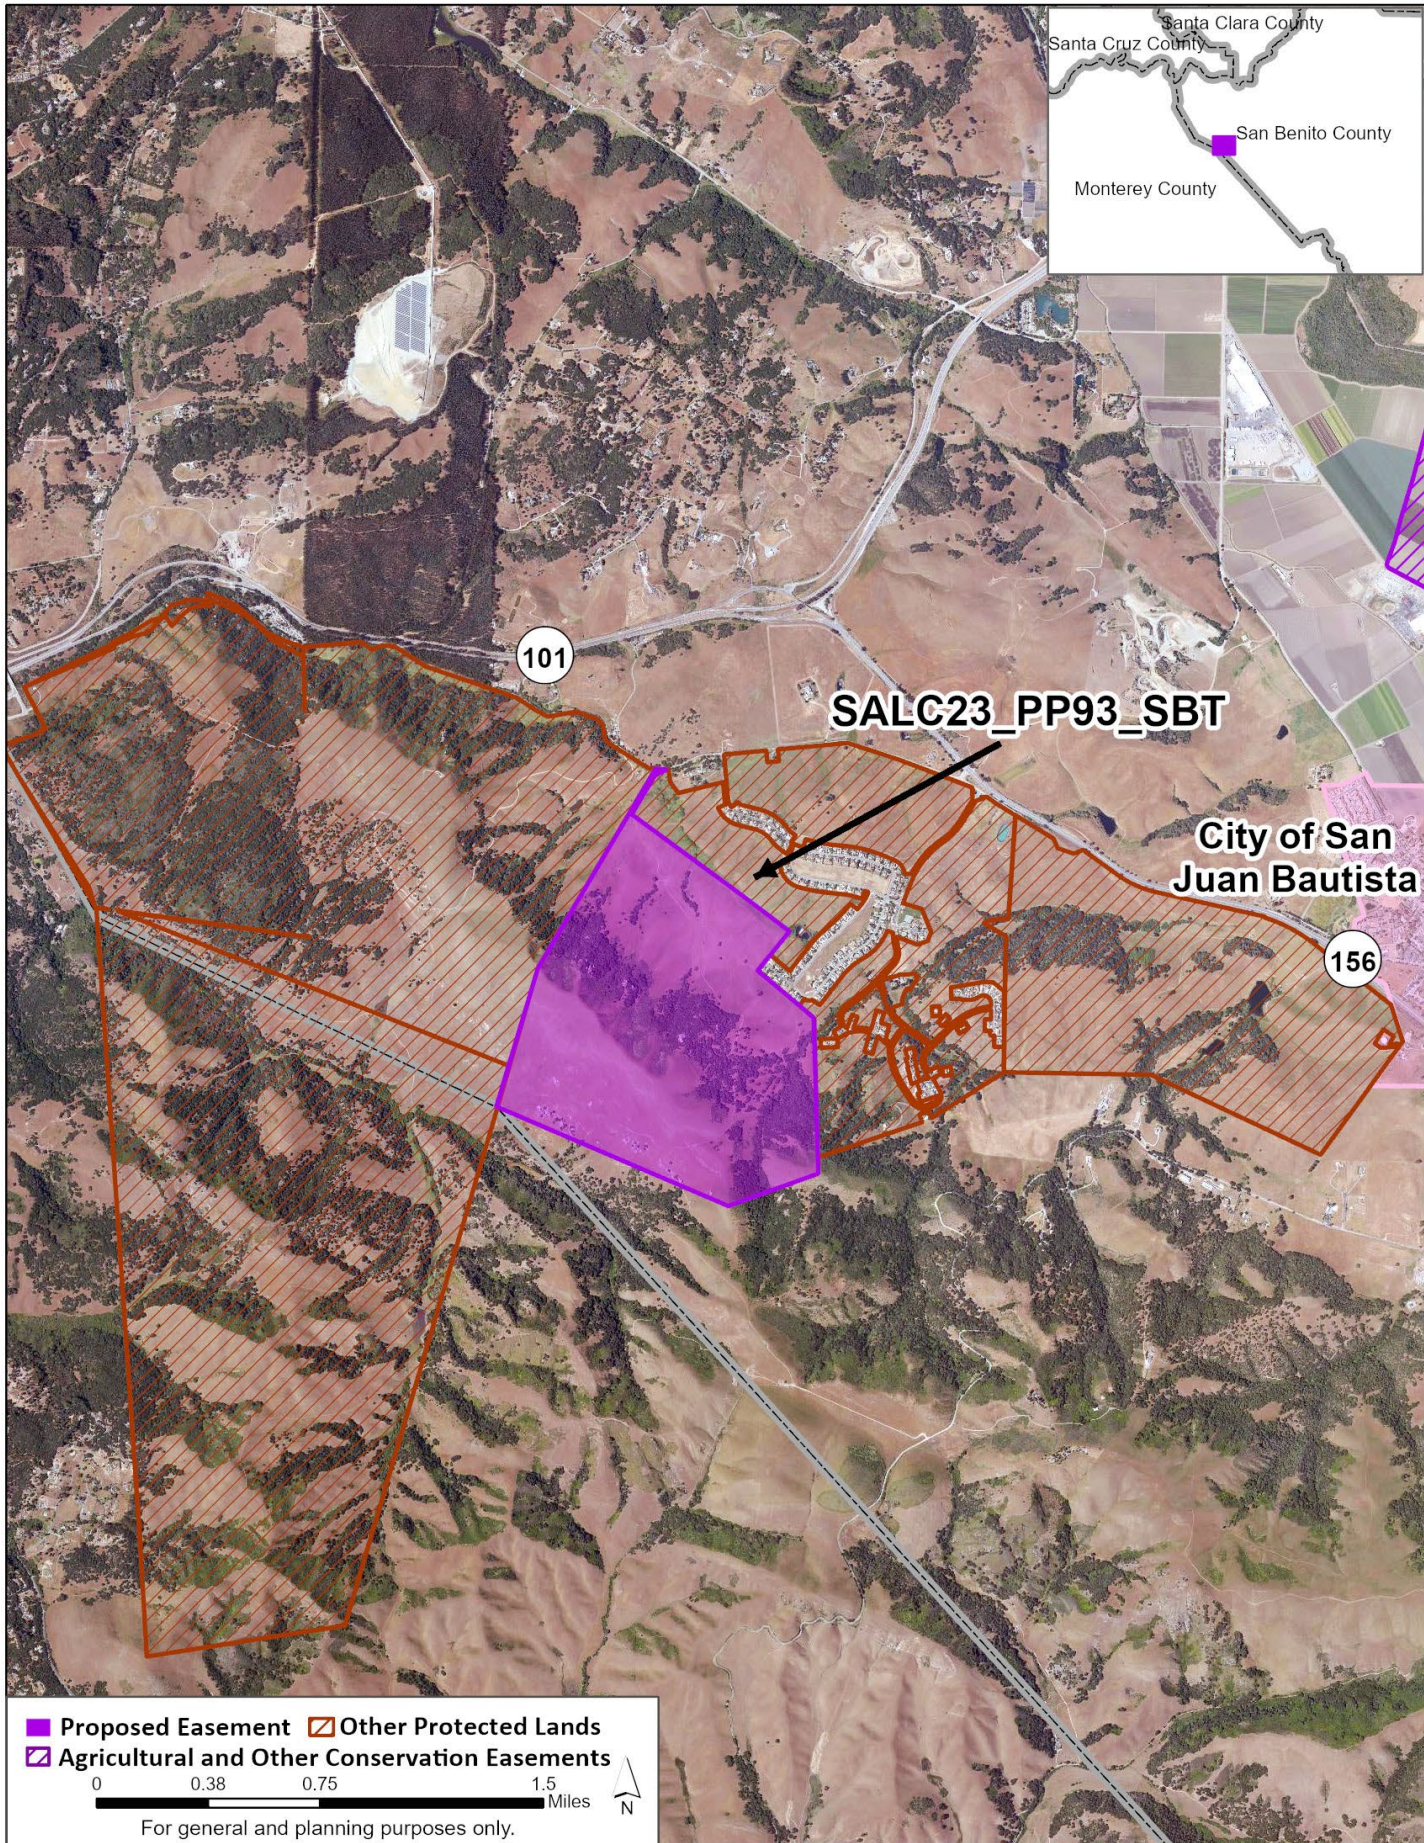

*Proximity to Protected Land:* With the acquisition of this property, SBALT would own 1,646 acres of continuous landscape.

Provides secure land tenure to a CA tribe

A CA tribe is the applicant/co-applicant

**Project Description**

This project would acquire in fee title a ± 63.12-acre Ranch in Redwood Valley, Mendocino County, adjacent to lands currently owned by the Coyote Valley Band of Pomo Indians. The site has been in continuous agricultural use since the 1930s, currently as irrigated lands supporting wine grapes. Currently owner-operated, the Tribe will assume full ownership and management upon acquisition.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* Protection of the property would support infill and compact development of the urbanizing areas of northern Redwood Valley and Laughlin, and increasingly urbanizing sprawl of development west of Highway 101.

*Equity*

*Tribal Co-Management & Access:* The property would be owned by the Coyote Valley Band of Pomo Indians, and managed to the benefit of the tribe.

*Secure Land Tenure:* This purchase would provide perpetual land tenure for the tribe.

*Sustainable Agriculture Use*

*Soil quality:* The property overlays 52 acres of Prime agricultural soils.

*Water Management Practices:* The property has multiple reliable water sources supporting continued agricultural use including rights to pump water year-round from the Russian River, a charter membership in the Redwood Valley Water District, and the right to fill an on-site reservoir.

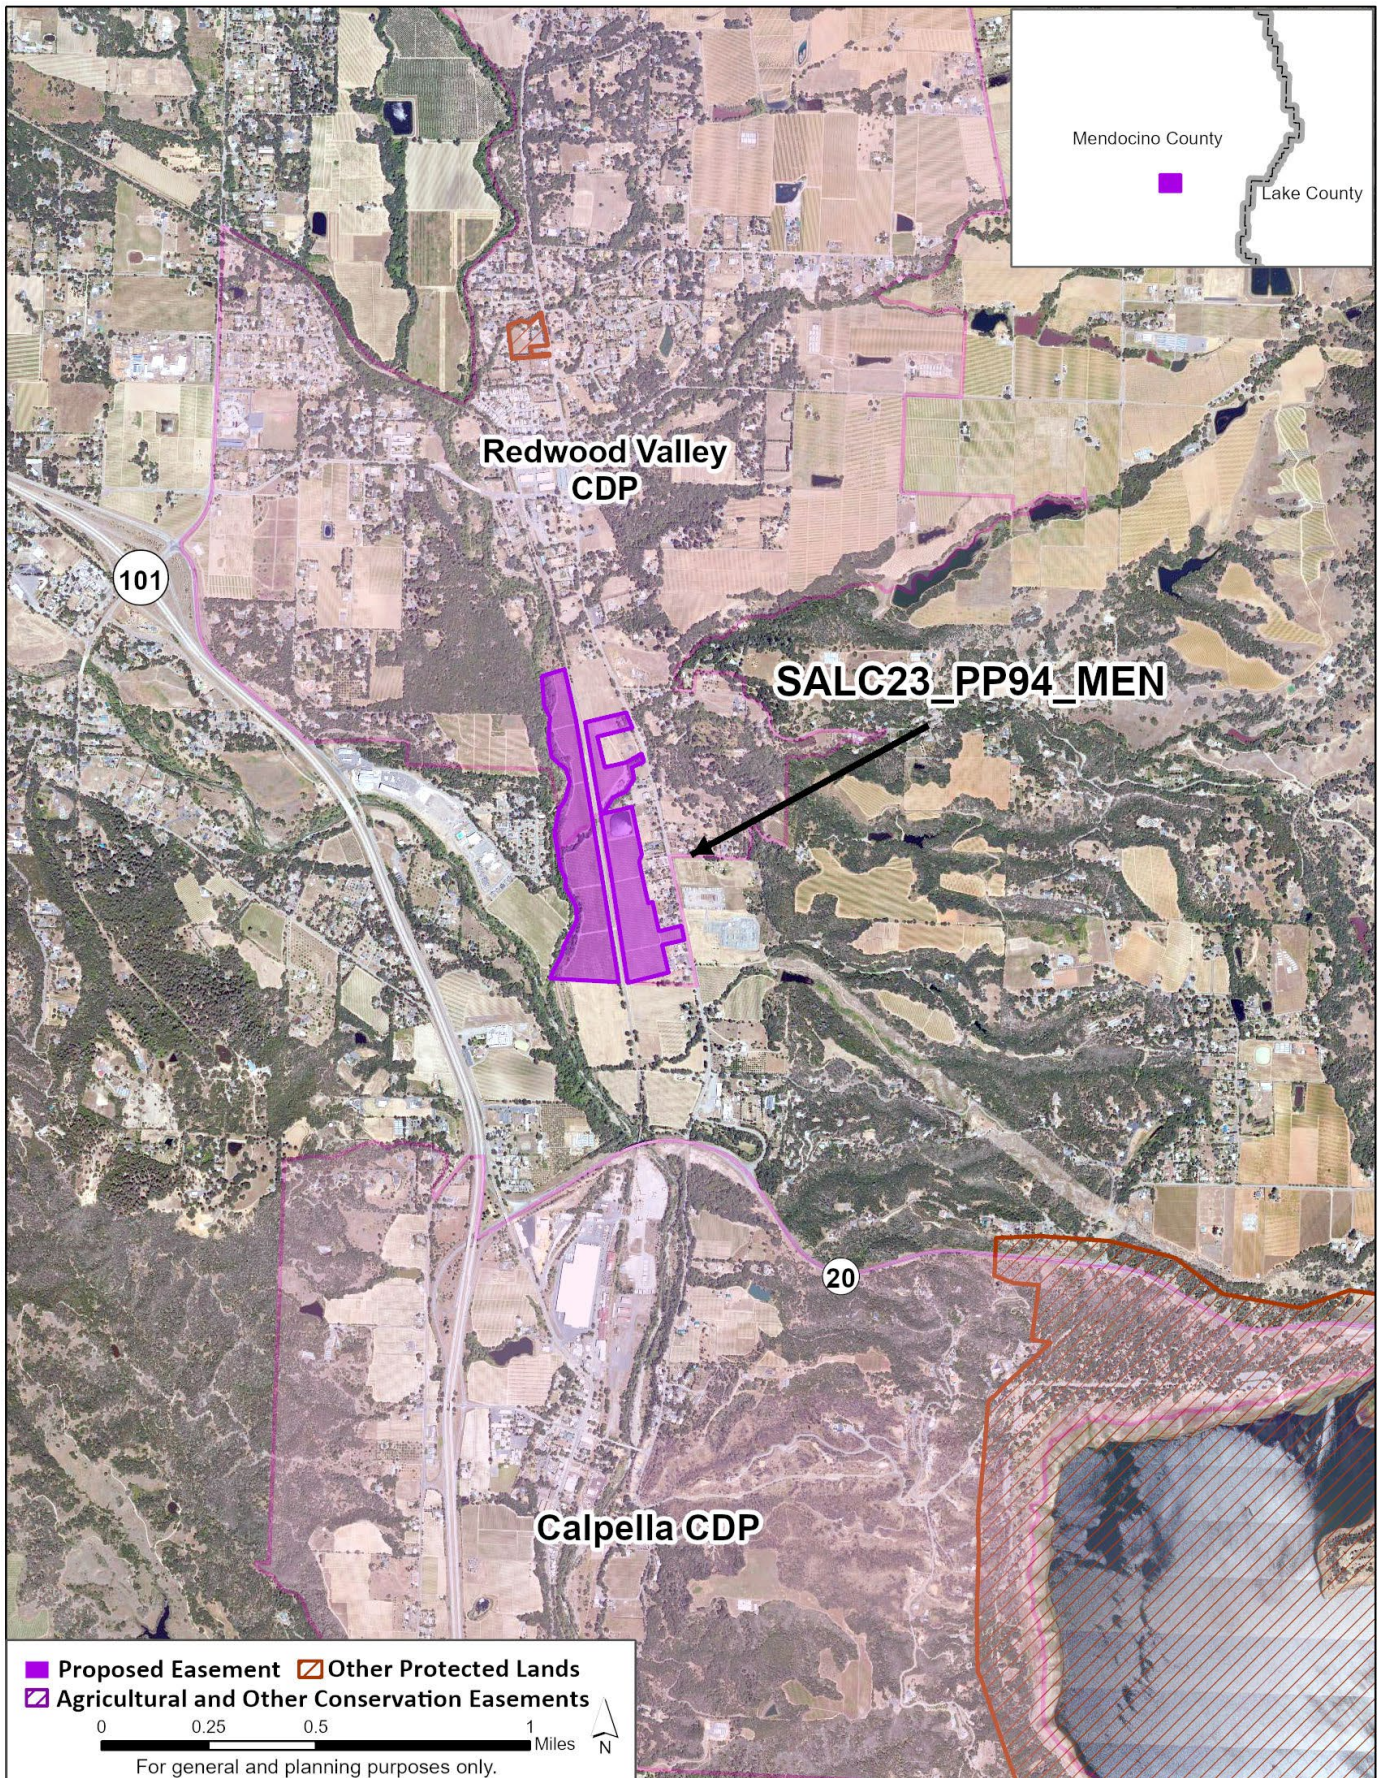

**Notable Features**

Legal access across a railroad bed bisecting the property must be secured.

The project includes development and implementation of a SALC funded management plan.

Bureau of Reclamation

**Priority Populations Benefits**

No

**Other Investment Targets**

None

**Project Description**

This easement acquisition project is for a ±358-acre property located in Tulare County. The property is lessee operated and is utilized for dryland sheep grazing. The property supports a band of sheep during the winter and spring months. Wool and meat products are processed in California and Colorado and sold in local communities. The agricultural operation is supported by existing infrastructure for stock water.

**Strategic Value**

*Co-Benefits*

*Biodiversity:* The property contains native alkali habitat and serves as a wildlife corridor with other protected lands.

*Proximity to Protected Land:* The property is situated between the Pixley National Wildlife Refuge, Allensworth Ecological Reserve, and Allensworth State Historic Park.

**Notable Features**

Applicant applied for Priority Populations Benefits.

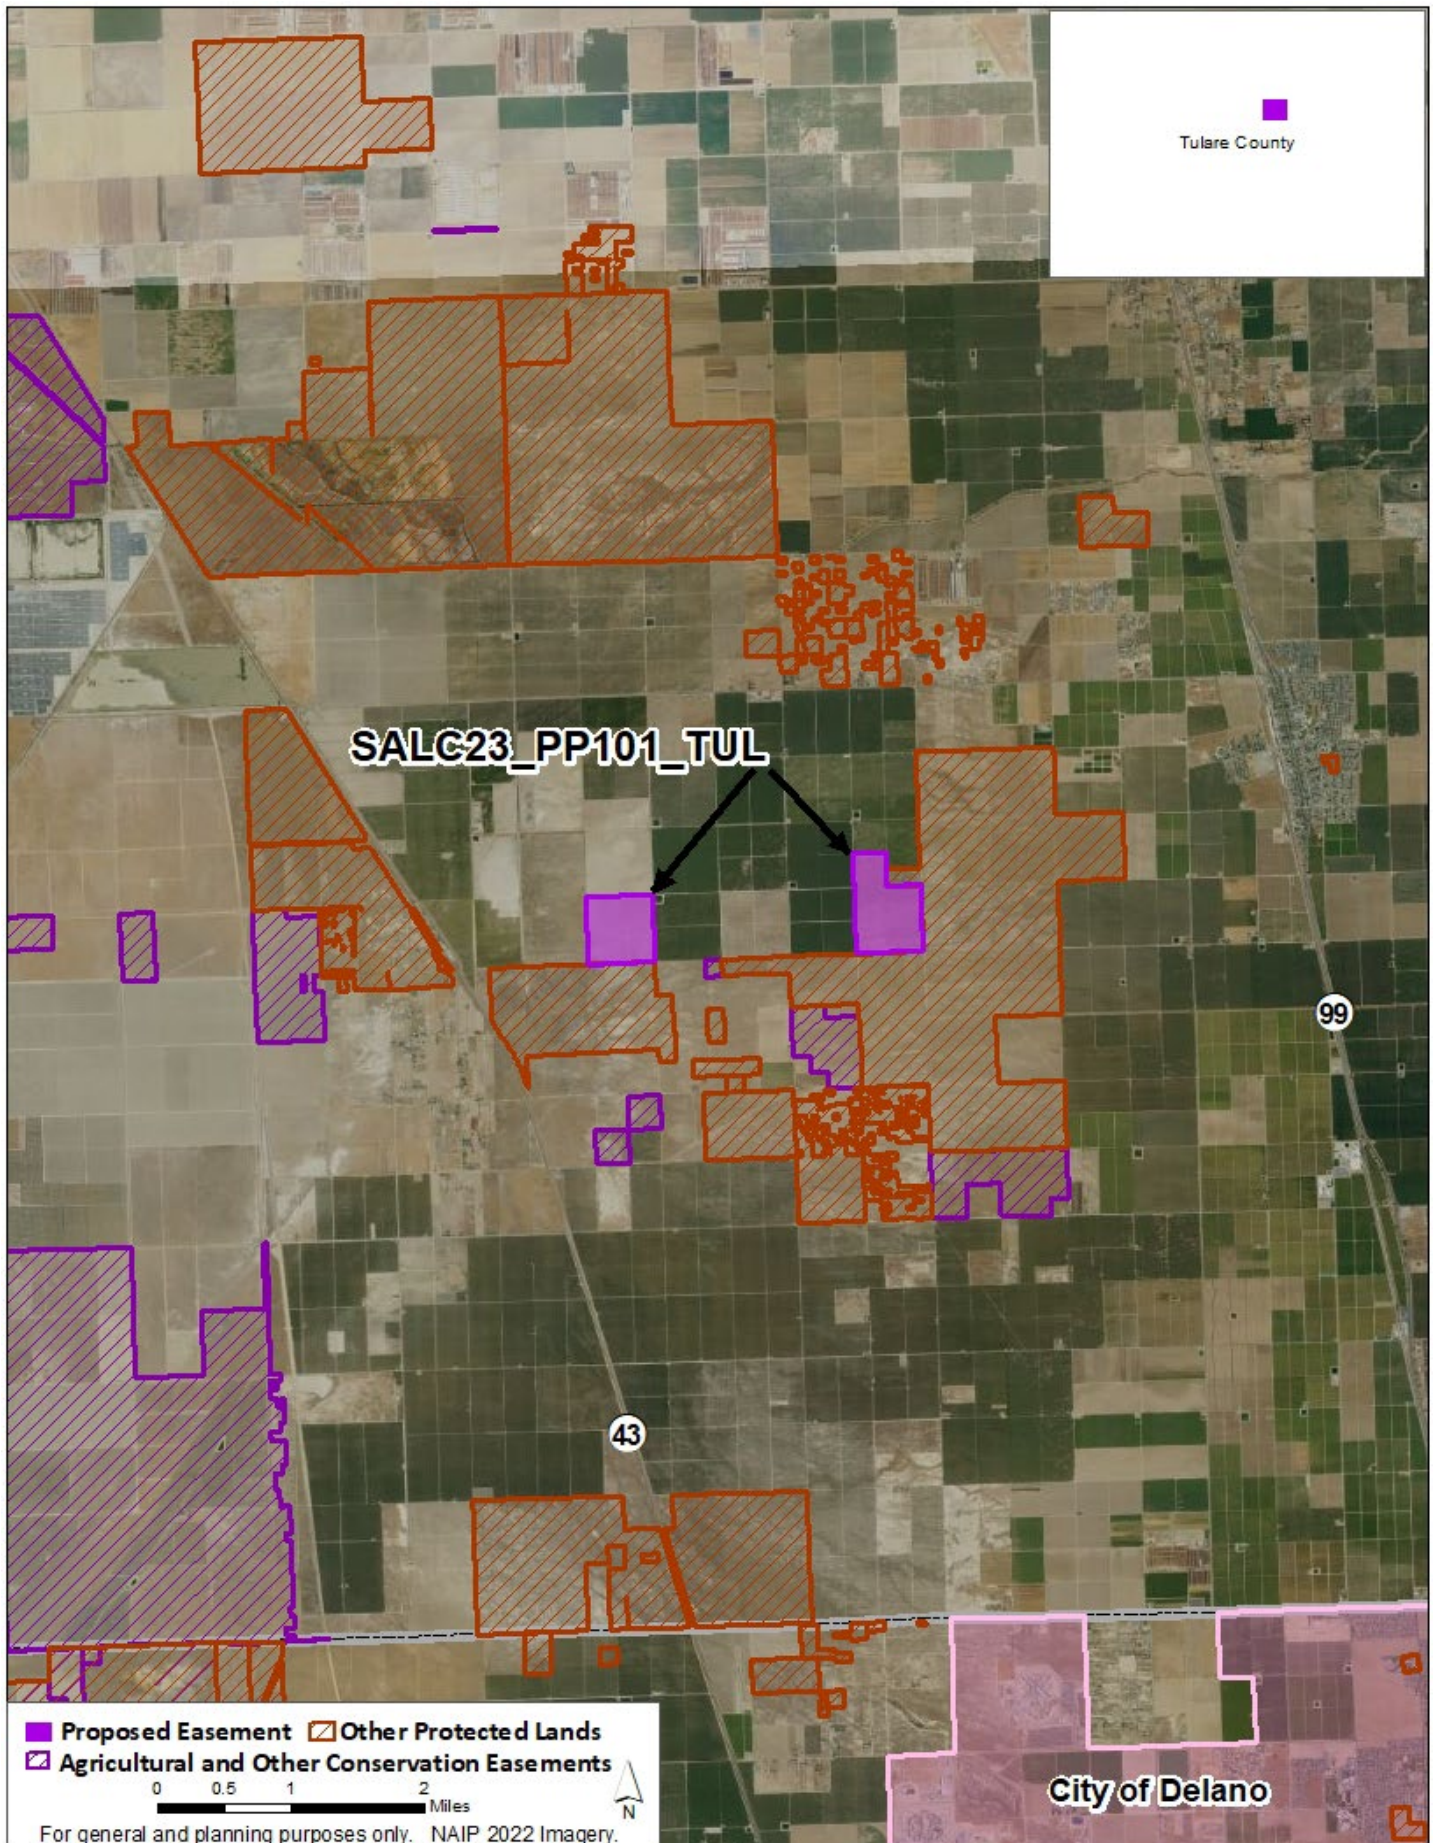

Approximately 166 acres are proposed for exclusion.

The conservation easement will restrict agricultural cultivation.

The project includes development and implementation of a SALC-funded management.

**Match Funding**

Application Submitted - NRCS  
ACEP-ALE

**Priority Populations Benefits**

No

**Other Investment Targets**

None

**Project Description**

This conservation easement acquisition project is for a ± 481-acre property in Amador County. The lands are used for the seasonal dryland grazing of approximately 75 cow-calf pairs. The property is leased for cattle grazing and used by the landowners to graze their own cattle, and has supported a successful cattle ranching operation since the 1940s. Infrastructure includes a corral, cattle chutes, well, and open water sources sufficient to support a sustainable cattle ranching operation.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* Properties to the north and the southeast of Briski Ranch have been subdivided and developed into homesites. Protection of the property will support infill and compact development as eastern suburbs of Sacramento continue to sprawl with low density development.

*Sustainable Agriculture Use*

*Water Management Practices:* The property contains several water sources in the form of agricultural wells, ponds, springs, and creeks.

*Co-Benefits*

*Economic:* The operation is part of the local economy: Cattle are sold at the Cattleman's Livestock Market in nearby Galt. Labor and support services are supplied locally.

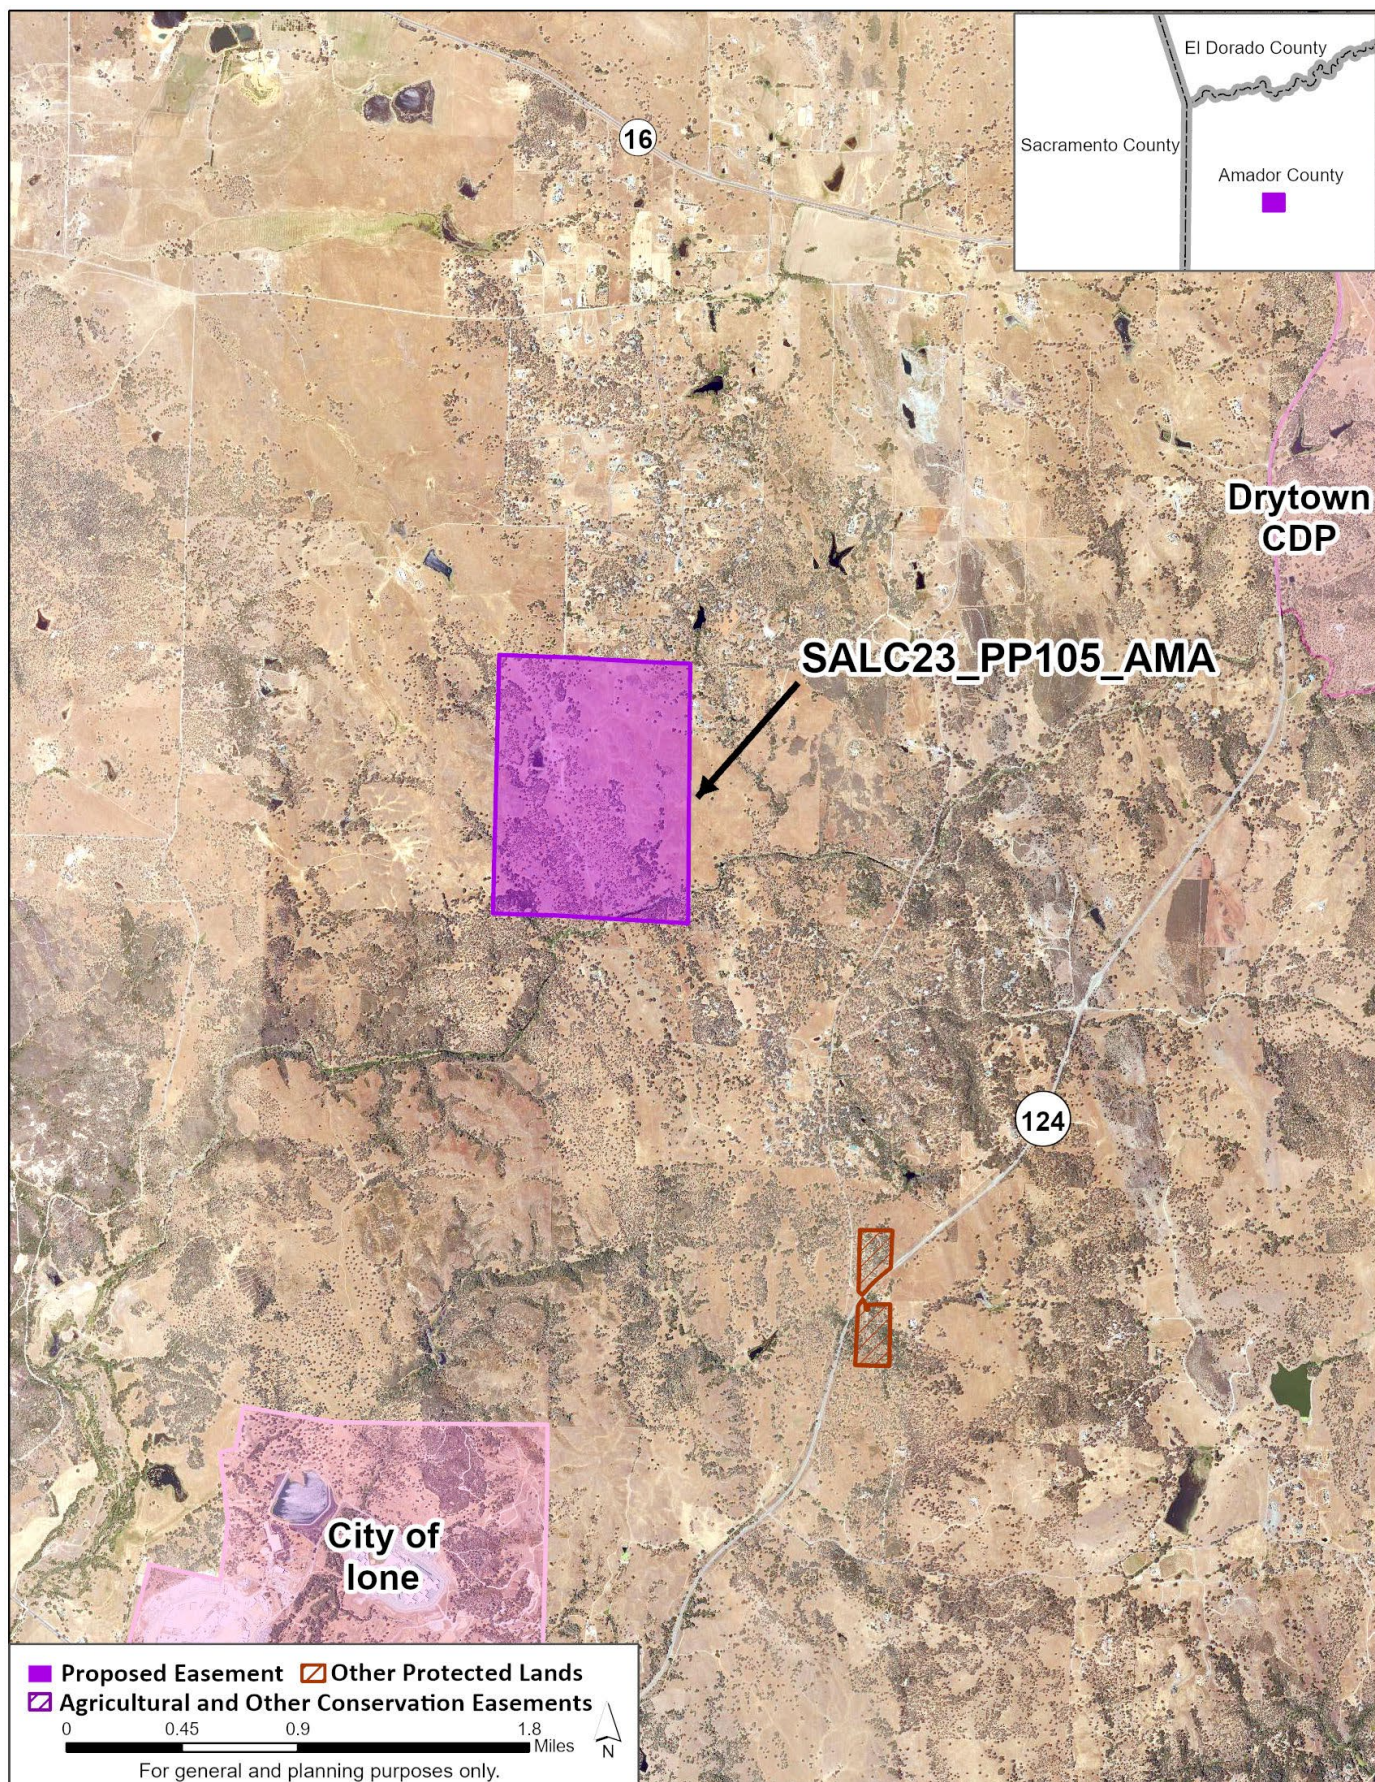

*Biodiversity:* The Dry Creek runs through the southern portion of the property and would benefit from protection within the Upper Mokelumne Watershed.

**Notable Features**

The project includes development and implementation of a SALC funded management plan.

**Other Investment Targets**

None

**Project Description**

This easement acquisition project is for a ±631-acre ranch near the town of Valley Springs. The property is one of several properties used as grazing land for a large commercial cow/calf operation operated by the landowner. Cattle are rotated between these properties spanning through California and Nevada. A maximum of 80 heads of cattle are on the property for seasonal grazing, primarily in the winter and spring when water is more readily available. Water is sourced from large ponds and multiple wells.

**Strategic Value**

*Infill and Compact Development*

*Infill/Compact Development:* The property is located a mile from the town of Valley Springs. Protection of the property would add to a block of conserved lands and encourage development closer to Valley Springs. Development is occurring south of Valley Springs.

*Co-Benefits*

*Biodiversity:* The property lies within an important migration corridor and is adjacent to EBMUD watershed lands that protect Pardee and Commanche reservoirs. Several CDFW-tracked species are known to occur around the property, including the California red-legged frog, American badger, and osprey.

*Proximity to Protected Land:* Protection of the property would add to a greenbelt surrounding Valley Springs.

**Notable Features**

The project includes development and implementation of a SALC-funded management plan.
